7: EPIGRAPHIC NETWORKS BETWEEN THE STUDY SITES

7.1 INTRODUCTION

The primary objective of this chapter is to utilise the detailed analyses of the assemblages from individual sites as the basis for a comparison of the distribution of specific epigraphic characteristics. This section of the thesis represents the culmination of the research where the data relating to the use of individual elements of the inscriptions as studied in chapters 5 and 6 will be considered within the historical and spatial context of the study region. The identification of patterns within the design and use of inscriptions that extend beyond the limits of individual sites and broadly generalised time periods will be interpreted as evidence of common behaviour and patterns of activity according to the background of social theory discussed in chapter 3. The evidence for these shared patterns will be discussed in terms of potential communities, either associated with individual settlements, or crossing between settlements indicative of a system of social networks. The term ‘community’ as defined earlier in the thesis refers to a set of people or agents who are linked by a shared or common component which for the purposes of this study forms the use of inscribed material culture. The benefit of the approach applied here is that it holds the potential to identify individual variations within the epigraphic patterns documented across the study area. This study has considered patterns in elements such as material, decoration, style and location associated with individual settlements. It will now investigate the possibility that the occurrence of similar patterns in the use of these elements between settlements may demonstrate the existence of a social network operating between those settlements.

7.1.1 The elements selected for study

For the purposes of this study, a selection of seven different elements has been made, all of which have the potential to elucidate networks between settlements. These comprise the following:

1. The period during which epigraphy first began to be used most frequently
2. The use of particular types of inscribed object
3. The use of particular materials, specifically types of stone

4. The use of decorative elements within the text and upon the object itself
5. The way in which death was recorded
6. Occurrences of dedications to the emperor and manifestations of the imperial cults
7. Evidence potentially pertaining to civic identity and identifiable groups within the settlement often associated with their profession

These elements have been chosen for several reasons. Firstly, with the exception of the dating phases which involved a certain amount of subjective decision making to set boundaries between phases, they comprise easily distinguishable categories. Secondly the first seven all offer the opportunity to consider evidence for both homogenisation and individuality. And thirdly the factors affecting these elements are not mutually exclusive. Therefore any relationships identified each form an integral part of the social networks in existence.

The continual reference of these patterns, communities and potential networks to the physical landscape provides an opportunity to discuss the impact that geography and topography had upon connections between settlements. It also offers the opportunity to assess the validity of the structure created by imposed boundaries such as the *conventus* divisions as a means of discussing both regionalisation in general and the specific factors which affected the area of operation of social networks within the province.

The distribution of each element will be considered in terms of the historical background and relative statuses of the study sites involved, the geography of the province, the types of monument erected and the makeup of the population, particularly as evidenced through the inscriptions.

7.1.2 The dating criteria

In the previous chapter the chronological distribution of the inscriptions from each of the study sites was considered in detail, taking into account the evidence relating to the history of urban development for each settlement. In order to analyse the spread of the use of inscribed monuments across the study area this level of detail must necessarily be reduced to some degree. The individual phases of occupation identified at each site have been reduced to a series of five more generalised phases:

- a) Republican: comprising material which can be dated positively to the Republican period and that which has been dated as either Republican or Early Imperial
- b) Augustan and Early Imperial: comprising material which can be dated as Augustan or which dates to the early to mid 1st Century AD
- c) Flavian & Post-Flavian: comprising material that dates predominantly to the later 1st and early 2nd Century AD
- d) 2nd Century AD and early 3rd Century AD: comprising material that has been dated to the 2nd Century, the mid to late 2nd Century or which cannot be dated securely to either the later 2nd or early 3rd Century AD
- e) From the 3rd Century AD onwards: comprising material which has been dated to any point beyond the start of the 3rd Century AD

These five phases form the chronological structure around which the analysis of the remaining six elements will be based. The undated material will necessarily be absent from this analysis, but the observations drawn from the detailed individual site analyses in chapter 6 will enable this study to identify any patterns in the dated material which appear anomalous in the context of the entire extant assemblage. A certain amount of fluidity between these dating periods must be allowed in order to account for the lack of precision often possible when dating inscriptions. This does not invalidate the data provided the potential possibilities are appreciated and their implications for the distribution patterns considered. The dating phases were devised both to fit the history of the province, and to limit the possibilities for multiple interpretation.

The data from each of the study sites have been plotted spatially within each of these phases in order to facilitate an analysis of the potential relationship to the landscape and natural features such as the routes of the river Guadalquivir and its main tributaries, man-made networks specifically the route of the Roman road system through the province, and the hypothesised boundaries of the conventus divisions.

7.1.3 The nature of the community

This research is based on the identification of communities through the recognition of common behaviour regarding the use of inscribed material. Before

these results can be interpreted it is important to assess the validity of this theory. It could be argued that in reality these patterns are the product of localised communities of professional craftsmen utilising similar designs and choice of language rather than an expression of common taste or action. This chapter proposes to consider whether it is possible to suggest that any of the patterns in the epigraphic characteristics of the study sites considered here do in fact demonstrate a common selection and decision making process which cannot solely be explained by manufacture within a single or small group of workshops.

Relatively little is known about the production of inscriptions within the study sites, but the data does provide some insights when considered in the context of the supporting archaeological evidence.

Not all settlements would have been large enough to support a permanent workshop, suggesting that in some areas at least craftsmen were more itinerant and worked locally or in situ on large projects such as at Munigua. There is a good argument for the association of various kinds of stone workers. Inscriptions from Italica record the *statio serrariorum Augustorum* who were stone cutters, involved with the removal of stone from the imperial quarry at Almadén de la Plata.¹ Other professions include the (*faber*) *lapidarius* seen on inscriptions from Carthago Nova² who were stone masons, and probably similar was the *saxo fab[er?]*.³ Masons working exclusively or predominantly with marble were *marmorarii*.⁴ Within these professions individuals would have specialise as for example in the carving of images or sculpture, and most would probably have worked with a range of apprentices who were responsible for some of the earlier less complex stages of production such as laying out the *ordinatio* for an inscription (*quadratararius*).⁵ and a *scriptor* or *sculptor titulorum* would have carved the script.⁶ It is likely that any stone workshops or *officinae* would have comprised individuals with all these different skills amongst them. At Italica there is evidence for local stoneworkers, in the form of a marble tablet with the first five letters of the alphabet inscribed upon

it.⁷ This was probably a practice stone and testifies to the likely existence of such a workshop. It is possible that there was a close link between quarries and stone workshops, and given the location of the *statio serrariorum Augustorum* in Italica notwithstanding the character of the town, it is not surprising that there was such a workshop here. Each of these workshops would have developed their own monumental and decorative styles and on this is based the argument that regional stylistic differences are due to the preferences of local workshops rather than those of the individuals of particular settlements. Stylow has argued on the basis of the skills displayed that the earliest example of an inscription from Hispania Ulterior which was not instigated by an immigrant Roman magistrate was probably carved by a mason attached to Caesar's army.⁸ It is likely that this was the case for many of these early monuments. As the local administration expanded to include native members of society who had gained sufficient rank to hold office, so it can be assumed that equivalent social change occurred within the professional communities and that the monuments came to be constructed by local craftsmen. There are no references to date for any *collegia* associated with stone workers within the study area which might indicate how they functioned as a group.⁹

In general many monuments would have been manufactured prior to the inscription of the text and would have been available in the workshop for a potential customer to choose from, or design their own at greater cost. Evidence of this might be seen in texts that have been squashed to fit the epigraphic field.¹⁰ An example of a monument waiting to be purchased and inscribed was found at Carmona, a funerary altar which suggests the location of a stone workshop here.¹¹ This town would probably have been large enough to support such an enterprise, particularly during the urban monumentalisation of the early Empire. There is evidence for a quarry of fossiliferous limestone in Carmona which supports the theory suggested previously for a conjunction of the two crafts in the same locations.¹² The craftsmen would likely also have worked in the smaller surrounding towns. similar conjunction has been observed in Corduba where there is good evidence for a quarry and a stoneworkers' *officina*¹³.

The question of the relative influence of workshops upon regional variation in epigraphic culture will be addressed at appropriate points in the discussion of the distribution patterns in this chapter.

¹³ *Gutiérrez Deza 2004.*

7.1.4 *The size of the assemblage*

The size of the dated assemblage will be represented in accordance with the quantity of material dated to each of the five phases individually. The analysis of reused inscriptions in chapters 4 and 5¹⁴ suggested that some monuments came to be replaced and reused within only a few generations. The assemblages could have been represented cumulatively but this would introduce a level of subjective analysis for which there is insufficient contextual and supporting data from within the study material. A cumulative analysis, whilst enabling the perceived and actual permanence of inscribed monuments to form an element of research as a factor affecting the erection of new monuments would require much more secure background data of the potential variations between monuments of different type and purpose. It might be acceptable for example to assume the continued display of a *titulus operis publici* physically attached to the building itself¹⁵. In general the inscriptions for which we have reuse information do not indicate a continuation of display between individual phases utilised here. As a result it is considered that individual analysis of each phase is the best way within the present study to examine the data.

Since the relative size of the assemblage at various sites cannot and should not be utilised as an indicator of the importance, wealth or size of the resident population, individual chronological distributions provide a more reliable indication of sudden rises and falls in the epigraphic assemblages of individual settlements.

¹⁴ 4.6.2 p 87-89; 5.3 p 98-99.

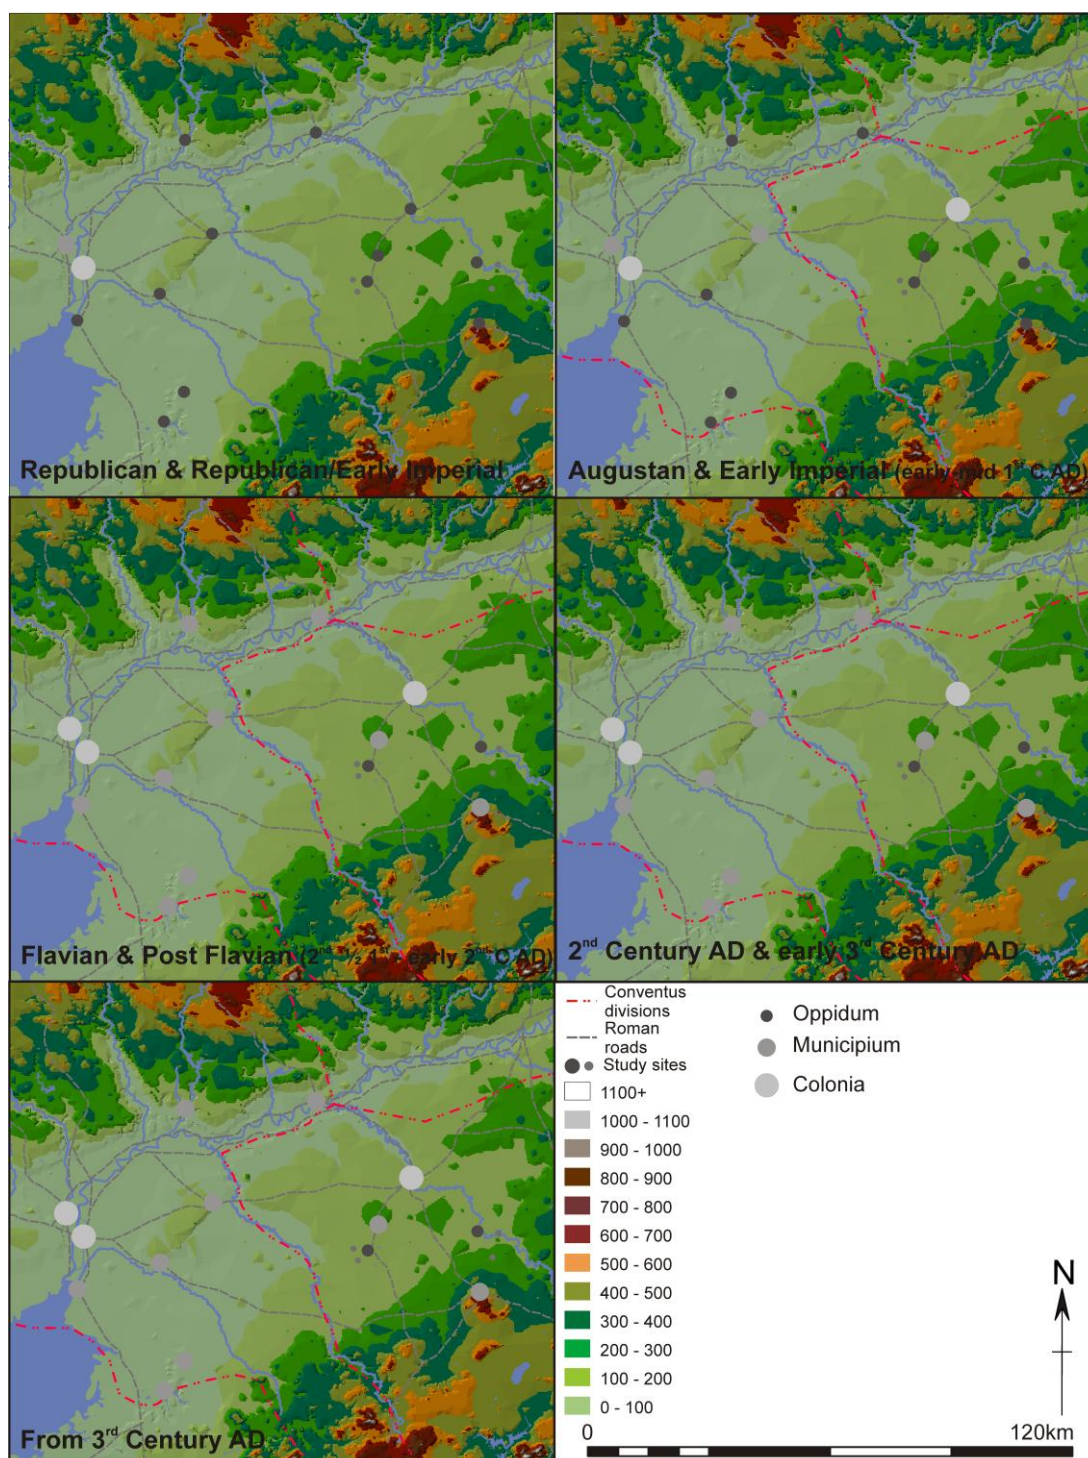

Fig. 55: Changing legal status of the study sites

7.2 THE PERIOD DURING WHICH EPIGRAPHY FIRST BEGAN TO BE USED FREQUENTLY (Fig. 56)¹⁶

The study region includes some of the sites to which the earliest occurrences of Latin epigraphy in the province are provenanced. These consist of the 2nd Century BC inscription of Mummius at Italica known only from a later copy and a small group of funerary inscriptions, the Lex Ursonensis dating to 44 BC and the *tabella defixionis* from Carmona which has been dated to the second half of the 1st Century BC but may be earlier¹⁷. It seems almost certain that the earliest inscriptions in Baetica from the Caesarean and Augustan periods are a direct result of the influx of colonists and immigrants to southern Spain rather than the handiwork of the local population. The high quality of certain early examples is more in keeping with the work of a stonemason connected to the military personnel of Caesar or working out of an established workshop such as those in Carthago Nova than that of a native stonemason newly introduced to the technique¹⁸. The rapidity with which these monuments were adopted also indicates that this scenario is the more likely¹⁹. Beyond this period the situation is undeniably more complex due to the likelihood of a greater degree of assimilation once the tradition became established and spread beyond the immigrant sectors of the urban population.

7.2.1 Late Republic

Overall there is comparatively little epigraphic material preserved from the Republican period, which may be partly due to the inaccessibility of Republican occupation levels and the destruction of Republican remains by subsequent urban development, but seems also to demonstrate that in fact the use of epigraphy did not really flourish until slightly later. Amongst the material are a number of objects which are not representative of the development of an epigraphic culture but indicate the presence of Roman military units in the region as a result of the Civil Wars of the 1st Century BC and in particular the Battle of Munda. These are the *glandes* (lead

sling-shot bullets) found near Castillo de Alhonoiz and Cerro de la Atalaya.²⁰ Four sites preserve material which may either date to the Late Republic or early Imperial period (Hispalis, Italica, Munda and Orippe) but are included here. Beyond the sites with military connections, supporting evidence for the presence of Roman citizens at Hispalis, Italica and Sيارum was presented in the individual site analyses in chapter 6. Hispalis was thought to have a *conventus civium Romanorum* and became a *colonia* after the Civil Wars. Italica was a settlement of immigrants promoted to *municipium* by Caesar. Sيارum was also settled by immigrants as is testified by the activities of a *legatus pro praetore*²¹. Carmo does not appear to have had a recognised legal status at this point but the archaeological remains discussed in the preceding chapter indicate that it was an important settlement in the region and its strategic location would no doubt have attracted settlers. After the siege and surrender of Munda it is likely that to all intents and purposes a 'Roman' presence was maintained at the town which might explain the early appearance of inscriptions here, whereas at Orippe proximity to the river is likely to have been the determinant factor.

The sites are located in the central portion of the study area, demonstrating no obvious selection of higher ground over lower. It seems apparent that in this phase the spread of epigraphic culture was dictated by the presence of Roman citizens which was conditioned by more political than social or geographic factors in the aftermath of the Civil Wars.

Three genres of monumental inscription have been preserved: *tituli honorarii*, *tituli sepulcrales* and a *titulus operis publici* which contrast with the *tabella defixionis* from Carmo. The occurrence of monumental inscriptions of different genres at different sites suggests that at least in these settlements it was employed more widely than the quantity of preserved evidence suggests.

7.2.2 *Augustan and Early Imperial*

The Augustan period sees a widening of the epigraphic distribution across the study area. This extends beyond sites of recognised Roman status and includes more

²⁰ This research strongly advocates the integration of all types of inscribed object for the analysis, not just those on stone (cf Favreau's approach 1997) but realises that in certain situations the *instrumenta* are not pertinent to the wider discussion.

²¹ SIA030IN: M(arcus).PETRVCIDIVS.M(arci).F(ilius)LEG(atus).PRO.PR(aetore)

sites on the river as was seen in the general analysis in chapter 5, and in the high ground to the south of the *campiña*. Two sites in particular stand out in this period - Astigi and Carmo. Both were the locations of substantial building programmes under Augustus which followed changes in legal status and necessitated the settlement of non-indigenous members of the elite together with communities of Italian settlers. Notable for its absence in this period is Celti with only one inscription dating to the mid 1st Century AD. This is in keeping with the interpretation of the archaeological remains as a continuing urban centre with a preference for older indigenous styles particularly of ceramics.

Augustan monumental inscriptions have been provenanced to Astigi, Carmo, Italica, Pagus Singiliensis and Siarum. Each of the sites with Augustan material in Hispalensis (Carmo, Italica and Siarum) also preserve inscriptions dated to the Republican period. However the two sites with Augustan material in Astigitanus (Astigi and Pagus Singiliensis) do not appear in either the Republican or Republican/Early Imperial assemblages. Since the division of Hispania Ulterior into Baetica and Lusitania and the conception of the *conventus divisions* in Baetica as the means to administer justice only took place between 16 and 13 BC, it is unlikely that this is anything other than coincidental and indicates the importance that the riverine network came to hold due to the inflation of status and urbanisation of the sites along the Singilis subsequent to those along the Baetis.

Those sites where the earliest material has been dated to the Republican/ Early Imperial period (Hispalis, Munda and Orippe) are absent from the Augustan period. It is unlikely that in reality there was a hiatus in the use of inscribed monuments at these sites. Therefore either the potentially earlier material in fact represents the use of epigraphy in the later phase of occupation, or other material exists which has not yet been discovered.

Overall there is a definite increase in the quantity of material preserved and widening of the distribution to new sites namely Astigi, Celti, Ostippo, Munigua, the Pagus Singiliensis and Salpensa which indicates a significant expansion in the epigraphic networks of the province at this time. The sites with the most significant increases in their epigraphic assemblages under Augustus and the early Emperors correlate with those settlements which experienced a change in status during this period, namely

the foundation of a *colonia* at Astigi with a community of Italian settlers and the elevation of Carmo to *municipium*.

7.2.3 *Flavian and post Flavian*

Each of the study sites preserves securely dated epigraphic material prior to the Flavian period except for Gandul (Irippo). This period sees a general increase in epigraphic numbers across the study area which may be tied to widespread social and political changes including the concession of Latin rights by Vespasian and the universal elevation of the remaining settlements to the status of *municipia* (Munigua, Celti, Oripo, Gandul, Salpensa, Atalaya, Ostippo).²²

Whether the concession of Latin rights by Vespasian and the receipt of citizenship had a direct impact upon the use of epigraphy by the population is uncertain but it is clear that at this time when the status of many towns was concurrently raised there was an appreciable rise in the employment of epigraphy. It may be that the new situation, if indeed there was an appreciable alteration, encouraged greater participation in visible forms of social communication and competition. At this time however across the study region there is evidence for increased urbanisation and monumental building programmes at Astigi, Hispalis, Oripo, and perhaps most famously at Munigua, (this had happened at the end of the Neronian period at Celti) and the locations of these sites correspond to increased quantities of preserved inscribed material.²³ Urban construction work both hinged upon contributions from wealthy benefactors and encouraged them as part of a burgeoning of self-representation amongst the elite population. It is this last social connection which was responsible for the rise in numbers of inscriptions. The assemblage from this period contains a high proportion of *tituli honorarii* and *tituli operi publicorum* indicating public benefactions. This situation was facilitated by the economic prosperity of the province and is particularly noticeable at the settlements along the main rivers (e.g. Hispalis and Astigi) which had benefitted from their advantageous position for the exploitation of agricultural resources and control of transportation networks. It is unsurprising then that these same settlements became important within individual territories as far as can be established. For this reason the route of the Baetis and the Genil were clearly important in the development of the epigraphic tradition in the study region as an

²² Pliny *Naturalis Historia* 3.30; Evidence for Vespasian's grant of *ius Latii* amongst the epigraphic assemblage takes the form of the adoption of *municipium Flavium* to the records of urban name at e.g. Munigua and Salpensa and imperial dedications at Munigua.

²³ See discussion in chapter 6 of individual sites.

indirect result of the potential for control and communication that the river and its main tributary offered. All the sites along these rivers rose in prominence in the Flavian and post Flavian periods. This same dominance is seen throughout the 2nd Century AD and into the 3rd. Sites which were not positioned in the main river valleys such as Carmo, Gandul, Ostippo and Siarum exploited other advantages such as their elevated position, superior visibility and ability to control the low-lying countryside, and these factors enabled them to prosper.

7.2.4 2nd Century AD and early 3rd Century AD

No decrease in the sustained employment of inscriptions has been evidenced in the study region during the 2nd Century AD, with the assemblages from each of the sampled sites either remaining in similar proportions or rising in numbers. At Siarum and Ostippo a similar significant increase in material from the post Flavian period into the 2nd Century AD occurs. Although increases are evidenced at all the sites in the region, at these two sites this represents the first significant use of the material. The assemblage from Italica at this period is particularly significant since it corresponds to the construction of the *nova urbs* by Hadrian and hence a significant change in the character of this site. This period sees a significant increase in the numbers of high ranking individuals (*senatores* and *eques*) who can be identified as of indigenous origin. This observation has very important implications for the interpretation of the reasons for the spread of epigraphic culture as it is now clear that within the study sites it has been adopted as a medium for expression and communication by the local elite. These individuals are seen most frequently in this period at Hispalis and Italica, with other examples from Siarum, Munigua and Gandul. Given the status of Astigi it is surprising that to date there is only one example from this settlement. Having been reluctant to adopt new forms and styles of material, by the 2nd Century AD Celti was putting epigraphic monuments to good use, but the assemblage is dominated by funerary inscriptions. Only four inscriptions have been positively identified as non funerary and these all took the form of *tituli honorarii*.

7.2.5 3rd Century AD

The only sites which are no longer epigraphically visible in the 3rd Century record are the sites in the territory of Cerro de la Atalaya and Castillo de Alhonoiz. The most significant assemblage of the 3rd Century AD is that from Italica. The range of types of inscription recorded during this period demonstrates that the factors promoting the use of epigraphy were still working strongly and resulted in a large number of *tituli sepulcrales*, but also *tituli sacri*, *tituli imperatorum*, and *tituli operum publicorum* indicating that inscriptions were still forming a vibrant element of the urban repertoire. Although a smaller assemblage is extant similar activities can also be seen at Hispalis through the preservation of a *titulus honorarius* and a *titulus imperatorum*, and also at Astigi with a *titulus honorarius*. Two *miliaria* from Astigi and Ostippo testify to continued maintenance of the road system during this period which indicates that the province was still flourishing.

7.2.6 Conclusions based on chronology

The implications of the period during which epigraphy was first adopted relate closely to the occupational history of each of the study sites and the social changes that took place within its population. It is clear from the generalised distributions based on chronology that the use of epigraphy developed alongside the generation of social networks that were instigated and facilitated by economic prosperity. The natural resources, development of settlement patterns and pre-existing social connections of the provincial landscape formed the basis for its incorporation into the culture of the region, but the necessity of individuals of wealth and status to take significant roles in the administrative and social development of individual settlements under the Empire and their wish to demonstrate those roles makes it clear that in Baetica epigraphy was closely linked to identity as a way of defining an individual's place in society and their relationships with others. In the earlier periods therefore it is clear that both those responsible for setting up inscribed monuments in the urban landscape and the professionals who constructed them were not native to southern Spain. This pattern was visibly starting to change by the Flavian and post Flavian era, and was clearly solidified by the 2nd Century AD when it is clear that a large proportion of the elite was of local origin.

Potential relationships can be drawn between the sites which adopted the technique at a relatively early and contemporary period i.e. Carmo, Italica and Siarum in the Republican period. By contrast therefore one might expect to see a comparable relationship between the sites which demonstrate an apparent reluctance to adopt the technique in the first instance such as Celti, but there is insufficient evidence to ascribe this interpretation to any of the other sites which are less visible due to the small size of their extant assemblages e.g. Iripito. At Gandul the nature of the history of occupation and location of the site might suggest possible parallels with Carmo. Munigua stands out against the wider patterns of epigraphic development, a comparatively small site with a particularly wealthy population based on its location well-suited to exploitation of the mineral resources of the Sierra Morena. The population of Munigua made a significant number of private benefactions for the benefit of the town. The unusual character of the broad mix of native and foreign building traditions and design makes this an interesting site in this context. It seems that at Munigua native and Italian traditions and individuals were particularly fused. Other relationships are documented by contemporary significant increases in the use of material as seen almost universally in the Flavian era onwards, indirectly resulting from the concession of Latin rights which impacted upon the social community by promoting social competition and expression.

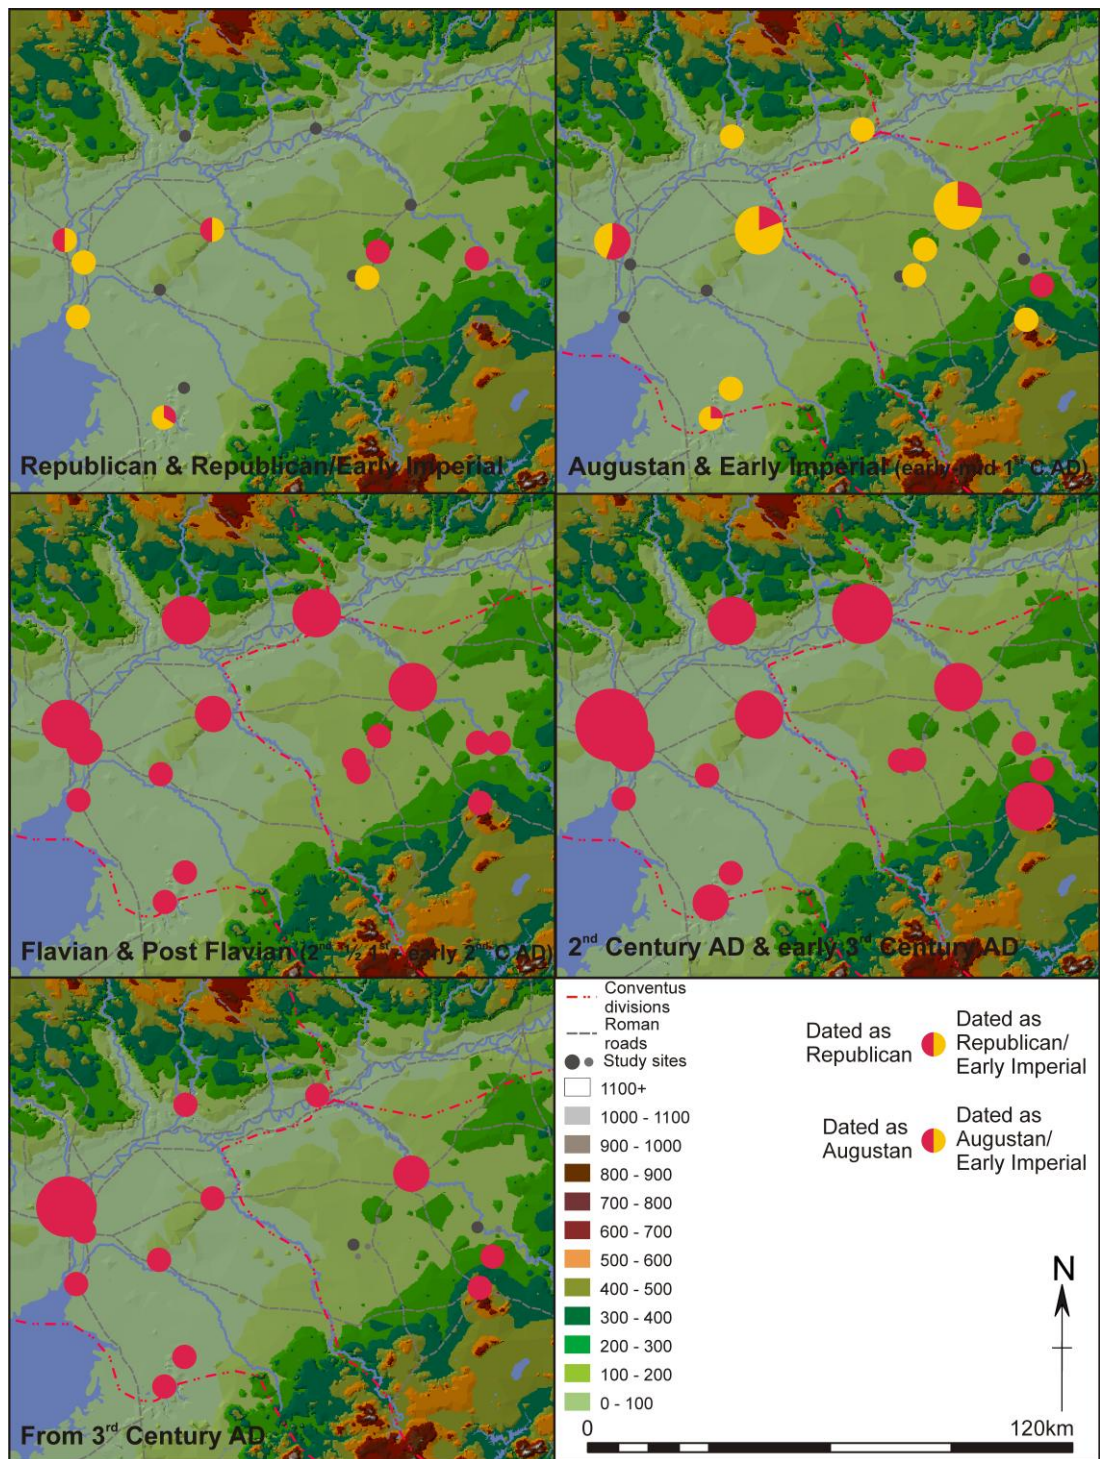

Fig. 56: Chronological distribution of inscriptions amongst the study sites

7.3 THE USE OF PARTICULAR TYPES OF INSCRIBED OBJECT²⁴

For the purposes of this discussion the types of object subjected to analysis have been restricted to exclude all forms of instrumenta with the exception of funerary *urnae* and *cistae*. Assemblages of inscribed instrumenta do not occur at all of the study sites and as such cannot be analysed in terms of their distribution. They would more profitably be compared with distributions of equivalent un-inscribed objects, but that falls outside the remit of this study. Funerary *urnae* and *cistae* have been retained since within this context the information they provide has more in common with other forms of burial inscription than with urns and boxes used for different purposes.

7.3.1 *Stelae*

Funerary stelae are seen at three sites across the breadth of the study area as early as the Republican period (Hispalis, Munda and Oripippo). They remain part of the Early Imperial corpora at Italica and Carmo but it is at Astigi that they really flourish. However as time progresses the distribution of *stelae* is reduced and generally restricted to the eastern section of the study area where they continue to be constructed in significant numbers. After the Augustan and Early Imperial period very few examples have been found west of the territory of Cerro de la Atalaya. In the Flavian and post Flavian era examples are concentrated at Astigi and Ostippo with a further inscription found at Lantejuela, and the 2nd Century AD distribution is spatially very similar with the exception of the reappearance of a single example at Hispalis. By the 3rd Century AD the only remaining examples have been provenanced to Astigi.

The continuation of this form particularly in the western and south western portion of the study region and most significantly at Astigi and Ostippo must represent a conscious decision to persist in the use of this particular type of early monumental form, not always in preference to but certainly alongside later structures. However, none of the four *stelae* with the potential earliest date derive from either of these sites. The latest example from Hispalis dated to the later 2nd or early 3rd Century AD may indicate that this monumental form continued in use on a much smaller scale within the urban epigraphic repertoire at least into the 2nd Century AD. The material from

²⁴ Tabularised data Appendix C.2 THE USE OF PARTICULAR TYPES OF INSCRIBED OBJECT

disassociated collections most likely to have derived from Hispalis provides no potentially supporting evidence with only one *stela* dating to the Republican/Early Imperial period. At Orippe the single *stela* is the only example of this type of inscription to have been found, but the small size of the extant assemblage precludes any assumptions that might be made about its use after this point. A similar situation occurs at Italica where a single 1st Century AD *stela* and an undated example are the only 2 specimens of the use of this monumental type at this settlement. Examples of *stelae quadratae* are found solely at Astigi and in the territory of Cerro de la Atalaya.

7.3.2 *Tabulae*

The distribution of an increasing number of *tabulae* occurs rapidly between the mid 1st Century AD and the Flavian and post Flavian era. This phenomenon is seen to occur across the study area with notable exceptions at Astigi and Hispalis in the Flavian and post Flavian phase, and Hispalis again in the 2nd – early 3rd Century AD. In fact Hispalis is the only site where in no phase are *tabulae* the dominant monumental form. At Astigi, Ostippo, Munigua and possibly also Sيارم the level of dominance is not comparable to that at the rest of the sites but it is still clearly the most commonly utilised monument by the 2nd and early 3rd Centuries AD. The preferential selection of the *tabulae* does not appear to have had a detrimental effect upon the variety of other types of monument despite the decrease in their numbers. Within *tabulae* there is wide ranging variation in size. This information was recorded together with the direction of the major axis (vertical or horizontal) during the initial data collection phase of this project and represents a valuable source of potential analysis. Most of the *tabulae* are rectangular but there are a small number of square examples. The depth of slab ranges in the main between 1 and 5cm, with fewer inscriptions between 6 and 9cm in depth. It might be argued that these monuments display so much variation that they should not be regarded as equivalent for the purpose of analysis of monument type. However it is the feeling here that since the general architectural structure is consistent throughout they should be taken as a single group. The popularity of the *tabula* derived from its flexibility and suitability for such a wide variety of different genres of monument which meant that it could be modified in shape and form in order to fit almost any urban situation.

7.3.3 *Arae*

The distribution of *arae* begins later than other forms in the Flavian and post Flavian era at Celti, Hispalis, Munigua and Siarum. Further examples are seen at these sites and at Carmo, Italica and Pagus Singiliensis in the 2nd and early 3rd Centuries AD in addition to an example which derives from either Salpensa or Siarum. The latest examples of *arae* from the study area were found at two of the sites where they first originated, Celti and Hispalis and also at Italica where they have only been preserved since the 2nd Century AD. However in the 3rd Century examples of *arae* are also preserved for the first time at Astigi. In the 2nd and early 3rd Centuries AD Hispalis demonstrates a clear preference for the altar and it is utilised widely for a range of inscribed genres comprising largely *tituli sepulcrales*, but also *tituli sacri* and *tituli honorarii*, demonstrating a flexibility of purpose that no doubt contributed to its popularity. At Italica it was also utilised on one occasion as the basis of a *titulus operis publici*. The altar therefore, whether funerary or votive, can be characterised as a monument which developed in popularity rather later than some of the other monumental forms. Its distribution was limited in comparison with other forms, but was adopted preferentially at both Hispalis and Italica.

7.3.4 *Statue Bases including columns*

Statue bases are evidenced at almost all of the study sites from as early as the Republican period at Italica. They were utilised for a variety of genres of inscriptions comprising *tituli honorarii*, *tituli sacri*, *tituli imperatorum*, *tituli operi publicorum*, as well as in some unusual cases *tituli sepulcrales*.²⁵ This adaptability is likely to have contributed to its high frequency of use. The use at Carmona and Hispalis of these monuments as funerary monuments is particularly unusual. Of the three monuments recorded, one dates to the 1st Century AD, another the 2nd Century AD and the third is undated so it is not possible to suggest why these monuments appear at this time. Nor does the information recorded about context provide any useful background.²⁶ Whilst the *tabula* became the most commonly selected object at Munigua it was closely followed by a significant number of statue bases. The proportion of these monuments here in the Flavian and post Flavian era is comparable only with that at Hispalis, and

²⁵ CAR061TS, CAR072TS & HIS144TS.

²⁶ CAR061TS: From the tomb of la gran Motilla, Alcaudete; CAR072TS: from Carmona, location uncertain; From Sevilla, location uncertain.

in the 2nd and early 3rd Centuries AD only at Siarum. This is due largely to the small number of funerary inscriptions within the assemblages at these sites but does not detract from the fact that they were clearly popular choices for monuments in these periods. The presence of these monuments in high proportions provides direct evidence for members of the urban population who were heavily involved within the community. They also indicate the importance with which personal display and honorific expression was regarded amongst that community. Statue bases most commonly took the form of rectangular blocks with a vertical major axis, but they are also seen in much smaller numbers with the main axis to the horizontal at Astigi, Celti, Hispalis, Italica and Munigua from the Augustan period through to the first half of the 3rd Century AD. Two examples from Augustan Astigi are cylindrical in shape, both of which are *tituli honorarii*. These are the only two such examples from the study sites. In addition a *titulus honorarius* from Hispalis is inscribed upon a column, and there is another possible such example from Italica.

7.3.5 *Parallelepiped*

Stylow has commented that *parallelepiped* and *stelae* co-exist in time but not in space during the 1st Century AD,²⁷ and this is true at all sites where these monuments have been found in the study region (Hispalis, Italica, Siarum, Celti, Ostippo, Munigua and the territory of Cerro de la Atalaya) with one notable exception: Astigi. Here both these monuments are found in significant proportions of the total assemblage in the Augustan and Early Imperial period. One other site where they appear to have been frequently used is Celti during the Flavian and post Flavian period. The *parallelepipedum* appears at the majority of the study sites to have been an early monument selection which is seen in substantially smaller numbers after the post Flavian era. However it first appears at Munigua and Ostippo in the 2nd Century and continues at Astigi into the 3rd Century so it cannot be classified purely as an earlier style and represents an interesting possibly more haphazard distribution pattern between these three sites.

7.3.6 *Conclusions based on the distribution of inscribed objects*

A combination of continuity and change is evident in the distributions of inscribed monuments across the study region. Whilst the *tabula* became the more

²⁷ Stylow 1998, 120.

frequent choice, the selections of other monuments tend to largely follow the choices made in previous phases of occupation and this continuity generally revolves around the use of statue bases and altars. Continuity is held at Carmo through the inscribed funerary urns which are found from Augustus through to the 3rd Century AD, demonstrating that at least in the western cemetery internment followed a relatively consistent form. Whilst inscribed funerary urns have only been documented to date at Carmo it is likely that this has resulted from the lack of ability to investigate any other urban cemetery site in as much detail. The settlement which demonstrates the greatest level of continuity between the Flavian and early 3rd Century AD phases is Munigua where a very consistent ratio between altars, statue bases and *tabulae* is maintained. It is possible that due to the more comprehensive excavation that has been carried out in the public areas of Munigua, the sample from this site is more representative of the true distribution makeup at other towns, though without comparable evidence this cannot be substantiated. Choices appearing to be relatively unusual (although perhaps as a result purely of survival) can be seen at most of the study sites such as in the selection of *parallepipeda*, or *hermae* at Munda and Astigi. The two sites which stand out as more irregular from the generalised patterns of distribution are Hispalis and Astigi, the former primarily for the predominance of statue bases and altars over the *tabula*, and the latter for its continued use of the *parallelepipedum* throughout its epigraphic history.

7.4 THE USE OF PARTICULAR MATERIALS, SPECIFICALLY TYPES OF STONE²⁸

With few exceptions the two predominant materials at all sites and in all periods are limestone and marble. A marked change is visible in the distributions in the Flavian/post Flavian period as the use of limestone is overtaken by a preference for marble. This shift must however be seen in context. Some of the earliest inscriptions were inscribed upon marble in the Republican/Early Imperial period, and limestone remained in use even into the 3rd Century AD although occurring more commonly as a more significant proportion of the total assemblage in the south western region of the study area. Of the three inscriptions from the Republican period for which a source can be identified, two derive from the marble quarry at Almadén de la Plata.²⁹ The third is carved from a limestone local to Siarum.³⁰ Unfortunately the *damnatio* of the inscription from Carmona means that the name of the individual commemorated cannot be ascertained, but based on the discussion of the social groups responsible for setting up the first Latin inscriptions in the province it seems likely that immigrant Roman citizens were responsible. The evidence from the examples from Italica and Siarum supports this theory since they include filiation in the names of the individuals recorded. The use of local stone at this early stage indicates that the communities of Roman citizens were already exploiting the natural resources of the province.

The assemblage from Flavian and post Flavian Munigua comprises a quantity of granite monuments. Two further granite inscriptions are seen again in the late 2nd Century at Munigua but by this period marble was completely dominating the distribution. Granite has only been identified at one other of the study sites, Hispalis, where a single example occurs dated to the late 2nd or early 3rd Century AD.³¹ This monument has been securely provenanced to Hispalis and so it can be identified as anomalous in this context. The dedication is a votive altar to Hercules by a procurator of equestrian rank with unusual geometric carving on its cornice only mirrored elsewhere at Carmona in the same period which may suggest the work of a

²⁸ Tabularised data Appendix C.3 THE USE OF PARTICULAR MATERIALS, SPECIFICALLY TYPES OF STONE

²⁹ CAR052TH & ITA059TH.

³⁰ SIA014TS..

³¹ HIS139SC.

single craftsman or workshop serving both settlements. The use of this material for inscriptions therefore seems particularly restricted. The availability of granite in the vicinity of Munigua, located on the southern edge of the Sierra Morena is doubtless the reason for its preponderance at this site³². Granite was in fact the most commonly utilised material for all types of construction at the site during the Flavian redesign in particular. Several of the granite inscriptions at Munigua were particularly significant monuments. Of the eight granite monuments identified five are *tituli imperatorum*. Two of these were to the Flavian emperors Titus and Vespasian,³³ a third was to an unidentified Flavian emperor³⁴ and the remaining inscriptions were dedicated to Trajan and Hadrian.³⁵ Other marble *tituli imperatorum* to Hadrian are preserved from the site although both are *tabulae* rather than statue bases.³⁶ The selection of granite therefore may be significant in these cases since it cannot be attributed to a temporal distribution or one associated with a particular genre or individual type of monument. All the granite inscriptions were statue bases with the exception of a single votive *ara*.³⁷ The patterns of use of granite at Munigua shares similarities with limestone at other sites in the movement from the use of locally available materials to marble.

The adoption of marble at Astigi as the predominant material in use occurs considerably later than at the other sites and limestone still comprises the majority of the inscriptions on stone in the Flavian and post Flavian era. In comparison limestone is also commonly used in 2nd and 3rd Century Ostippo. This may be connected to the availability of limestone since Ostippo is located on a higher ground on the edge of the *Sierra subbética*.

White marble is consistently the most commonly represented marble at all sites except for Ostippo. White marbles with coloured veins are also seen almost universally amongst the central and northern sites of the study area. Non-white marbles with coloured veins are only seen at Astigi, Celti and Italica and only at

³² Grünhagen's single site analysis (1979), though erroneous in part as were all first attempts at a discussion of marble source in the region, was nevertheless revolutionary in its approach.

³⁷ MUN012SC.

Italica in more than one period appearing from the Republican through to the 3rd Century. The distribution of non-white marble is wider and more consistent across the study area. Munigua is a notable exception, preserving remains of no non-white marble monuments in any period, with or without coloured veins. A slightly greater variety of material is documented at Italica than at the rest of the study sites, which can be explained by the location of a *statio marmorum*, a distribution centre for marble transported from the quarries at Almadén de la Plata. This variety mirrors that within the materials used for construction in the monumental architecture at Italica³⁸.

The relative proportions of white limestone and non-white limestone varieties are less polarised. White limestones were most common at Astigi in the Augustan and early Imperial period, but the distribution of non-white limestones is wider reaching as was identified with the distribution of the non-white marble. White limestones with coloured veins have only been found in the central region of the study area at Carmo and Munda, and non-white limestones with coloured veins are restricted to the west at Astigi, Munda and Herrera.

The distribution of stone of known source, which is admittedly a very small proportion of the total number of extant inscriptions, gives a very sketchy indication of the breadth of the networks for their employment within the study region. This distribution is based upon the work of a handful of studies³⁹ and the proportion of material that has been sourced compared to that which has not is very small as was demonstrated in the discussion in chapter 5. As a result of the breadth of the studies conducted, known sources comprise Almadén de la Plata in the Sierra Morena to the north, Sierra de la Mijas in the southern mountainous range, stones local to Carmo and Sيارum, as well as a single instance of imported marble and a generically ‘Roman’ marble. Although only stones local to Carmo and Sيارum have been identified, it is likely that local stones were used at a large number of sites and have just not been identified, as potentially for example at Ostippo which was near a source of dolomitic sandstone.⁴⁰ The most representative of the Baetican marbles comes from Almadén de la Plata and a comprehensive distribution network was

³⁸ E.g. Mayer & Rodà 1998 228; 231-234; Léon 1989.

³⁹ Canto 1977-1978; Braemer 1986; Cisneros 1988; Grünhagen 1979.

⁴⁰ Cisneros 1988, 70-77: ancient stone working sites in Roman Baetica.

clearly involved in its exploitation. Italica functioned as a redistribution centre for the quarried stone from this site. So far the available evidence demonstrates a wide distribution for this material across the study area from the earliest periods documented continuing into the 3rd Century AD. Close proximity to the riverine network necessary for transport of these materials and also to the Sierra Morena itself appears to have been a factor with no examples from sites south of Gandul yet identified. This would need to be compared with the evidence for marble from Almadén in other contexts to ascertain whether this marble was not used at all this far south or just not in the case of inscriptions.

Based on the available evidence it appears that the distribution of marble from the Sierra de la Mijas does not extend north of Italica. Whilst the evidence is slim and by no means conclusive, when compared with the apparent southern limit to the distribution of the marble from Almadén de la Plata, it may appear to be more significant, and certainly worth contemplation in the future if backed up by further evidence. If this were proven to be accurate, it would indicate that practicalities dictated by proximity to resources were important factors in the selection of material for inscribed monuments. Although the comparative ease with which marble from Almadén de la Plata can be identified due to its distinctive appearance has doubtless biased the distributions to some extent, it still appears to have been used commonly throughout the more northerly half of the study region. Given that Almadén's quarry was under imperial ownership it would have had a wider distribution network than the smaller individually owned quarries,⁴¹ but yet based on the evidence currently available that network did not extend into the most southerly portion of the study area.

The only recorded instance to date within the study sites of an imported marble used for an inscription was from Carystos and found at Italica in the theatre which may prove interesting since marble from this location does not appear on the list compiled by Mayer and Rodà after microscopic analysis of the decorative marbles within the theatre.⁴²

⁴¹ *Padilla Monge 1998.*

⁴² *Mayer & Rodà 1998, 233-234.*

Baetican marble does not appear to have been exported widely if at all.⁴³ Therefore local stone was very important to the province and was utilised widely and often in preference to more expensive exported materials. Some sites such as Italica may demonstrate a wider variety of material from geographically distant sources than others such as perhaps Siarum where the materials used are predominantly local or not too distant regionally. The predominant selection of local and regional material seems to be universal across the study area based on the available evidence. Improvements to the distribution networks by land and river would have increased the potential for access to regional materials but this does not appear to have affected the use of local material which is still seen in use in the 2nd Century AD for a *titulus operis publici* perhaps indicating that it was also being used for general construction at this time.

7.5 THE USE OF DECORATIVE ELEMENTS WITHIN THE TEXT AND UPON THE OBJECT ITSELF⁴⁴

To a certain extent the distribution of decorative elements and motifs is closely linked to the distribution of monument types. Therefore representations of liturgical vessels are most commonly seen amongst the assemblages of sites containing significant numbers of *arae* such as Hispalis and Munigua. By the same token recessed epigraphic fields are seen most commonly at Astigi, Ostippo and other sites where the relatively plain *stela* was more prominent. The distribution plots below illustrate a level of homogenisation in the use of a range of decorative techniques such as the recessed epigraphic field, sculptured border, and architectural decoration and carving such as on the cornice which are found at most of the study sites across the five periods of comparison. Also common were entirely undecorated monuments. Simple unembellished monuments appear to have been the norm in the Republican period, but the selection of simplicity of design also continued into the 3rd Century AD when a significant number of funerary monuments from Italica in the main but also Astigi, Carmona, Caeli and Orippo are completely plain. The data from Astigi and Carmo in the Augustan and early Imperial period suggest that decoration was in fact an early development, common in varied form by the Flavian period. The lack of decorative features on the monuments from Orippo is slightly artificial due to the number of *instrumenta* in the extant assemblage which are not included here, the lack of dating evidence for a funerary *ara* with *patera* and *praefericulum*,⁴⁵ and the lack of recorded data relating to decoration for the remaining monuments.

The most interesting insights into the use of decoration come not from the standardised elements but from instances of unique motifs which highlight certain settlements at different periods. By far the most noticeable of these are the individual incised faunal and floral motifs engraved on the funerary inscriptions from Caeli in the later 2nd and early 3rd Centuries. It is unfortunate that for so many of the monuments dating to the earliest phase of Caeli's epigraphic history, the later 1st Century and early 2nd Century AD, we do not have recorded details of decorative elements. This makes it difficult to judge how these distinctive motifs relate to the entirety of the town's

⁴⁴ Tabularised data: Appendix C.4 THE USE OF DECORATIVE ELEMENTS WITHIN THE TEXT AND UPON THE OBJECT ITSELF

⁴⁵ ORI010TS.

epigraphic culture. Inscriptions dating to the second half of the 2nd Century AD are known where no decorative elements have been utilised,⁴⁶ so there was certainly some variation in design. Similar motifs are sometimes found upon different monuments from the site, but these motifs are not repeated elsewhere amongst the study sites.

Borders composed of a series of *ova* also have a restricted distribution, found only at Hispalis and Munigua in the later 1st and 2nd Centuries, with the use of a single ovum as an individual motif found on one example from Italica in the 3rd Century AD. Elaborate floral borders are likewise less common than plainer examples with examples at Hispalis, Munigua, Celti and Ostippo only which date between the Flavian and 3rd Century AD. Entirely unique motifs are found at Carmo and Italica including various glyphs and a series of horizontal bands dividing the epigraphic field at Carmo.

One phenomena seen earliest at Carmo in the Augustan/Early Imperial period and which continued to be utilised across the whole study area into the 3rd Century was the use of decorative interpuncts (*puncta*). Standard triangular *puncta* were the most commonly utilised at all sites except for Carmo, but in addition to these and the *rotunda* were a variety of different motifs and combinations of motifs. The most popular decorative *punctum* overall was the *hedera* but there were some interesting and unique variations across the study area. *Puncta* styled as crescent moons are seen at Italica during the Flavian and post Flavian period and at Munigua in the 2nd Century AD which may indicate a relationship based the continuing characteristics of an individual workshop. Square *puncta* are seen at Astigi in the mid 1st Century, wavy lines at Hispalis in the 2nd and tear drops at Italica in the 3rd Century. Variety and individuality therefore was not a later development, unique choices were made regarding decorative elements early on and continued throughout the study period.

Most notable from the study of decorative elements is the unique character of the material from Celti which stands out in the 2nd and 3rd Centuries from all the other sites. The use of these unusual decorative motifs produces a very distinct assemblage

⁴⁶ CEL017TS, CEL050TS, CEL057TS & CEL063TS. There is nothing in particular within the inscriptions to suggest why a plain monument was selected. In CEL017TS the individual recorded was from Corduba which might have suggested that she had selected a type of monument design foreign to Celti, but there is no evidence that the individuals recorded in the remainder of the inscriptions were not local.

with a recognisable character not seen elsewhere amongst the study sites. It is interesting to note that this occurred at a site where the archaeological evidence has demonstrated a persistence of indigenous forms of material culture. It is possible that these decorative elements represent the conflation of a new form of material culture with more traditional forms of decoration, but this hypothesis cannot be substantiated without careful assessment of decorative techniques utilised at Celti in other forms.

7.6 THE WAY IN WHICH DEATH IS RECORDED⁴⁷

The majority of extant inscriptions from the study area commemorate the lives of deceased members of the population. Two genres of inscription provide clear evidence of this relationship between the living and the dead. *Tituli sepulcrales* mark the place of burial with a straightforward commemoration of the deceased and are usually located outside the urban boundary. *Tituli honorarii post mortem positi* are placed within the context of the living urban space, often in central locations within the town and as a result were potentially much more visible than the majority of funerary inscriptions, some of which may have been located in private tombs.

Analysis of the formulae in funerary inscriptions reveals that a relatively small number were utilised and that the variation between individual monuments usually exists in different forms⁴⁸ of this basic repertoire. Record of the dimensions of the burial plot was particularly common at Astigi.⁴⁹ The distribution at Astigi includes a series of four identical inscriptions marking a single grave, but this does not overly weight the distribution in comparison with the assemblages from other sites. At all the other sites where it appears only single examples are preserved: during the Republican/Early Imperial period at Orippe,⁵⁰ at Italica in the Augustan period,⁵¹ and Ostippo in the late 1st Century AD.⁵² In the cases from Orippe and Ostippo the inscribed objects are *stelae*, as it would at Italica were this information available.⁵³ Not enough information survives on which to base a hypothesis that the use of *stelae* at Orippe was not usual. At Astigi the objects used are predominantly *stelae* (14) but also include 3 *stelae quadratae*, 2 *tabulae* and a *parallelepipedum*. A variant form, *P(ede)s L(atum)*, is seen on a single inscription at Carmo in the 1st Century AD.⁵⁴ The text is inscribed upon a *stela*, also an anomalous form at this site. It is possible that this inscription records the existence of an individual not local to Carmona who chose to utilise the conventions with which he or she was familiar when setting up this

⁵⁴ CAR026TS.

inscription.⁵⁵ Its predominance at Astigi ensured that it was the most common formula to be used during the whole of the 1st and into the early part of the 2nd Century AD but after this period there is a complete cessation in use of the formula. This formula was common in Italy, and may potentially indicate the presence of immigrants in the earlier periods as has already been suggested by other forms of evidence.

The combination of the formulae *Hic Situs Est* and *Sit Tibi Terra Levis* is seen right across the study area at almost all the sites and was a popular formula from the Republican/Early Imperial period until the 3rd Century. It forms a significant proportion amongst the assemblages at most sites with the exception of Carmona where it is seen less frequently, and noticeably so in the 2nd and early 3rd Century with the use of *S.T.T.L.* alone much more common here. This may possibly be explained by the types of burials for which we have evidence from Carmona, namely cremations in funerary urns on which this formula is not used. The use of this formula at the end of inscriptions is common throughout Spain during the 2nd Century AD later than it is seen in Rome and Gaul.⁵⁶ Also unusually this is sometimes repeated after the name of every individual commemorated.⁵⁷

Similarly widespread and popular is the standard opener *Dis Manibus* with or without *Sacrum* which dedicates the monument to the spirits of all deceased souls and that of the individual buried there. The use of this formula appears earlier in the western portion of the study area than in the east with examples at Italica where it is picked up particularly quickly, Hispalis, Carmo and Celti. In the Flavian and post Flavian period the use of this formula represents a very distinctive difference in character between the inscriptions of sites in Astigitanus and those in Hispalensis. By the 2nd Century AD the formula is represented at all of the study sites with the exception of Munda due to its small sample size. In the 2nd to early 3rd Century period there appears to be another consistent pattern between the sites in Hispalensis and Astigitanus. The distribution suggests that the occurrence of the formula *D.M.S* is proportionately smaller in Astigitanus than in Hispalensis. The distribution continues into the 3rd Century appearing to be a little more restricted but this may be an artefact

⁵⁵ There is little information recorded in the text relating to the deceased individual, Privatus.

⁵⁶ Carroll 2006, 133.

⁵⁷ e.g. AST072TS.

of the small quantities of preserved material from the sites as there are still significant numbers preserved at Italica, Astigi and Celti.

The final formula which is seen in significant numbers at a large number of the study sites is *Pius in Suis*. This formula is particularly associated with Baetica and is not only rare elsewhere in Spain but virtually never inscribed out of Hispania except by foreign immigrants drawing on their local traditions.⁵⁸ This formula first appears in the Flavian and post Flavian era at Italica, Hispalis, Celti, Siarum and Astigi and continues in use into the 3rd Century. During the 2nd Century it appears to be more commonly used in the eastern part of the study region at Celti, Astigi and Ostippo where it appears in larger proportions than at Hispalis, Carmo and Italica. In terms of the proportions preserved at this time Celti seems to have more in common with the sites in Astigitanus at this period than with those in Hispalensis.

The formula T(e) R(ogo) P(raeteriens) D(icas) is seen only rarely and only in Hispalensis during the Flavian period and 2nd – 3rd Centuries AD with the exception of a single example to date in Astigi.⁵⁹ It is also seen alone at Carmo in the Augustan period. By contrast, the incorporation of D(ic) Q(ui) L(eges) or D(icite) Q(ui) L(egitis) is only observed at sites in Astigitanus. Salutations such as *Vale* are very rare, in fact unique to a single inscription from Carmona.⁶⁰ Mention of the bones of the deceased, *ossa*, is restricted to Carmona, a product of the excavation of the internments of the western cemetery.⁶¹

The general picture presented by the evidence is that in general epitaphs from the study region are highly formulaic, making use of a range of standard phrases with varying degrees of abbreviation. Some inscriptions attempt a more individual composition although often this is achieved by reworking the traditional formulae such as variations on *Hic Situs Est* which replace *situs* with *iacet*, *quiescit* and *interfectus*.⁶² This last appears on an altar from Los Castellares. This phrase is sometimes used to indicate where an individual was killed in battle⁶³ and in this case it suggests that the deceased was laid to rest where he was slain although not in battle

⁶³ Examples from Moesia AE 1905, 0163, CIL 03, 14587, CIL 03, 14214, 12, CIL 03, 08242 & CIL 03, 14574, and Britannia AE 1964, 0169;

due to the date of the inscription in the 2nd Century AD. Variations on *Pius/a in Suis* involve replacement of the pronoun with a specific relative such as *nepotem* at Herrera⁶⁴. Despite this homogenisation individual preferences are evident at some towns. Carmona stands out for its wide range of formulae with only *Dis Manibus Sacrum* and possibly *Sit Terra Tibi Levis* being common to any degree.

Looking specifically at the range of formulae denoting age at death, it is clear that *annorum* was the most common overall choice for the indication of age at death in years in each of the phases considered here. However it seems to have been less dominant in the west than to the east of Carmo. The formula *vixit annis* appears to have been more popular at Italica than at any other site and is seen in use from the Flavian period onwards. At this point the relative proportions of these two formulae begin to change, becoming roughly comparable and subsequently demonstrating a rise in the popularity of *vixit annis* to the detriment of the earlier formula which is barely evident in the 3rd Century. Beyond these large scale patterns of common formulae, there appears to be less variation east of Carmo with the exception of Astigi where a variety of formulae are utilised but are only preserved in very small numbers.

Indications of less common selections of formulae can be seen at a few sites. Records of age at death in months and days (*menses* and *dies*) are particularly common at Italica and also at Hispalis in the Flavian period. Age at death in hours is seen only in undated examples from Sevilla and at Carmona in the 2nd to 3rd Century. Several formulae are only seen at Italica and these tend to occur in either the 2nd or 3rd Century. The inclusion of age at death in months in the accusative case is preserved only in the 2nd Century. *Vixit annis plus minus* is only seen in the 2nd and 3rd Centuries and *Qui vixit annis* only in the 3rd Century AD.

Thirty four examples of inscriptions record burials of between 2 and 5 individuals, with 2 the most common. Those individuals buried and commemorated in this way fall into two categories where their relationships to one another can be identified. They either have close family ties as parents and children or husbands and wives, or they share the same patron or owner as freed individuals and slaves from the same household. Not all individuals who were commemorated with shared

⁶⁴ HER006TS

inscriptions can be assumed to have died at the same time. Examples of texts have been found which clearly leave space for an inscription relating to a second individual.⁶⁵

A total of thirteen inscriptions, including five *tituli sacri* and a *titulus honorarius* in addition to examples from each of the categories discussed above, reflect the intentions of individuals considering the practicalities of their own demise and making provision for an inscription to be set up after their death either for their own benefit, for family members or for the veneration of a deity.

⁶⁵ None have been found from the study sites, but an example from elsewhere in Spain has been found at Segovia: Carroll 2006, 89; Knapp 1992, no. 321.

Table 15: Inscriptions recording multiple burials

The distribution of the use of epithets in funerary inscriptions shows clearly that this was a technique utilised particularly at Italica where a variety of different terms were employed mainly during the 2nd and 3rd Centuries. Epithets appear at other sites in small numbers of inscriptions but rarely in more than one form and never in more than two except at Hispalis in the 2nd and early 3rd Centuries. Epithets do not appear until the Flavian period and demonstrate a relatively restricted distribution which largely seems to be confined to the northern sites of the study area, with no examples south of Gandul, although this may result from the smaller sizes of the assemblages with the possible exception of Ostippo. At any event this is not a widely dispersed phenomenon and although the large numbers of funerary inscriptions at Italica will have contributed to the larger numbers witnessed here, the numbers of undated inscriptions containing epithets not illustrated on the distribution plot here do not provide evidence to argue against the perceived predominance of epithets at Italica.

The single most common adjective utilised throughout the sample assemblages from the study sites is *pius*. It was discussed above that the phrase *Pius in Suis* is peculiar to Baetica in particular and so this distribution reflects a characteristic which can be associated with the province as a whole. This general distribution raises the question of how we interpret the use of this adjective within inscribed epithets. Its widespread use perhaps indicates a less deep seated meaning and formulaic selection rather than individual choice, but the fact that its use is restricted to such a specific geographical area also questions whether this tells us something about the specific connotations of this word within Baetica. Nielsen's analysis of the use of this phrase in the inscriptions from CIL VI led her to believe that premature death particularly of children was behind the motivation in the use of this adjective and that it is most commonly seen in relation to sons and daughters commemorated by their parents.⁶⁶ The results from the study sites indicate that her Italian model should not be applied to the material from Baetica, which demonstrates a more widespread use of the term in the relationships to which it is applied than Nielsen's research. The same term was used with clients and freedmen and freedwomen as well as with close members of the family unit, which reinforces the validity of regarding them as a complex, extended social unit.

7.7 OCCURRENCES OF DEDICATIONS TO THE EMPEROR AND MANIFESTATIONS OF THE IMPERIAL CULTS⁶⁷

The purpose of this section of the discussion is to ascertain whether the monuments to so called imperial cults had in reality more connections with standard dedications to individual deities, or whether they can be interpreted as indicators of a greater affinity with the emperor and the empire and hence an identity that extended beyond the individual settlement.

The earliest dedications are not to reigning emperors but to Tiberius prior to his adoption by Augustus⁶⁸ and Drusus as Caesar.⁶⁹ The dedication to Nero at Salpensa⁷⁰ is therefore the earliest evidence for a dedication to a living emperor. Dedications to deified emperors are rare. Of the two examples, one was originally dedicated at Munigua to the living Titus and only altered after his death to include the title '*divus*'⁷¹, the second, also from Munigua, was dedicated to the divine Vespasian. This does not appear therefore to have been a particularly important part of the epigraphic culture of the study region based on the available evidence.

The importance of Baetica ensured that many emperors had personal knowledge of the province gained whilst on campaigns within the region,⁷² or whilst holding an administrative office as part of their political career.⁷³ In 2 BC the province of Baetica sent a pure gold statue, a personification of the province, to Augustus in Rome in commemoration of his award of the title *pater patriae*⁷⁴. Whilst instances as prominent as this are infrequent, the most common identification of the relationship is through dedications to the emperors and potentially references to the imperial cult⁷⁵. The closest relationship Baetica claimed with Rome was through the Spanish emperors, Trajan and Hadrian. Marcus Ulpius Traianus was born on the 18th

⁷⁴ The statue was placed in the Forum Augustum and the dedication read *Imp(eratori) Caesari Augusto p(atrici) p(atriciae) Hispania ulterior Baetica quod beneficio eius et perpetua cura provincia pacata est auri p(ondo) C(entum);* Alföldy, 1992, 74

⁷⁵ E.g. CIL II 1049, 1065 & 1066; Etienne 1958; Millar 1977; Fishwick 1987.

September in the town of Italica.⁷⁶ Although his family was originally from Umbria they had resettled in southern Spain after the conquest. Trajan's father (also named Marcus Ulpius Traianus) had a distinguished military and civil career which included the governorship of Baetica.⁷⁷ Trajan's successor Publius Aelius Hadrianus (Hadrian) was the son of his cousin Aelius Hadrianus Afer whose family had also relocated to Italica.⁷⁸ It is tempting to consider the descent of these two first 'provincial' emperors as extremely significant for the way in which Baetica was viewed from Rome and indeed the way in which Baetica viewed itself within the Empire.⁷⁹ During the reign of these two emperors there is certainly evidence for a particular connection with the province, most notably with Hadrian's *nova urbs* at Italica. However, by this time there were also a considerable number of senators from the province,⁸⁰ so Baetica was well established within the Empire and its administration. The nature of the relationship perceived during this period may therefore equally reflect these senators taking advantage of the close connection with the emperor. Whilst there are dedications to Trajan and Hadrian at Italica,⁸¹ there are more preserved to date from Munigua⁸² which indicates a broader connection than that associated with the emperors as a result of their town of birth. The dedication to Trajan at Italica was made by a likely Italian, of the Maecia tribe. It is unfortunate that this one of only two inscription where the origin of an individual dedicator has been preserved. There is a possibility that the Hadrianic dedications at Munigua, were set up by the local *decuriones* on behalf of the town.⁸³

This issue is extremely important for an understanding of whether Baetica became ideologically part of the Roman Empire. Italica had understandable reasons for making dedications to the emperors, but it was by no means the only city to do so with inscriptions preserved in addition at Hispalis, Munigua, Ostippo, Salpensa and Siarum. It seems at odds with much of the other evidence to explain imperial

⁷⁶ The evidence from Eutropius (*Breviarium historiae Romanae* 8.5) places Trajan's birth in AD 53 and is adopted by most historians whereas Cassius Dio calculates it as AD 56 (*Historia Romana* 68.6.3 & 68.33.3); Bennett 1997, 13-14 argues for acceptance of Dio's date of AD 56; Birley 1976, 38.

dedications simply as a result of wholesale assimilation since so much of native identity and tradition can be seen to have been retained in the material culture of Roman Baetica. The erection of dedications to the emperor does not necessarily signify ideological integration into the Empire. They are often set up by members of the higher social orders – senators and equites who in the earlier periods may not have been members of the indigenous population – and by other local magistrates, for all of whom social promotion was particularly important. Of the individuals who can be identified as dedicators of *tituli imperatorum* there is a definite weighting towards those of senatorial and equestrian rank, and although only one other records their *tribus* as Galeria⁸⁴ it seems likely given the later date of the inscriptions that these would largely have been native members of the elite. There is therefore amongst the *tituli imperatorum* from the study sites no evidence to suggest that concern with honouring the emperor extended beyond the local magistrates and elite. Imperial dedications and references to the imperial cult are found all across Baetica. It has been suggested that the existence of pre-Roman ruler cults in this region was influential in the adoption of the practice of imperial dedications in Baetica⁸⁵. The expression of a relationship with the emperor or through observance of an imperial cult might entail connotations of belonging to the system of which the emperor was the head but the contextual information for social identities argues that at most this may have come to form part of the identity of some of the native social elite.

The nature and significance of the imperial cult is variously characterised. At one extreme it may be described as a formal means by which members of provincial societies were encouraged to participate in an activity which might solidify relationships within the empire and engender loyalty.⁸⁶ At the opposite end of the scale it has been argued that imperial cults followed the same selection process as with ordinary deities and that no special significance should be associated with them as indicative of different allegiances or forms of worship. In this second scenario the addition of Augustus or Augusta made no real difference to the nature and purpose of the cult and merely represents a nod to convention. In this case therefore there is a

⁸⁴ SIA004TI.

⁸⁵ See Etienne 1958; Fishwick 1987.

⁸⁶ Curchin 1991, 161-162.

possibility that a similar process can be seen between the dedication of straightforward *tituli sacri* and those concerned with the imperial cults.

As might be expected in a province with such a diverse ethnic and cultural history, the range of deities invoked in the inscriptions from the study sites is also varied. The most common divinity invoked is that of the spirits of the departed, the *Di Manes* with 253 examples across the 12 study sites which appears only in funerary inscriptions and therefore explains its prolific distribution. Beyond this 11 other deities are represented either 2 or 3 times, and only 8 of these occur at more than one site. The remaining 33 deities are all unique in the nature of the dedication. This demonstrates the individual and personal nature of these dedications, and suggests that the selection of these deities had personal significance to the individual dedicator or settlement. When we look more broadly at the dedications it becomes obvious that a number of different attributes are shared between the deities selected for dedications. By considering the attributes of the deities recorded and their specific relevance to elements of daily life or relationships a series of broad themes can be categorised as follows:

1. Deities associated with agricultural and human fertility, and aspects of the natural landscape: *Ceres*, *Domina Fons Fovens*, *Liber Pater*
2. Commerce & profitability: *Bonus Eventus* and *Minerva*
3. Creators and protectors, including mother goddesses and the family: *Domina Isis*, *Domina Regia*, *Domnula Bubastis*, *Isis Regina*, *Isis Victrix*, *Imperio Iunio*, *Matres Aufaniae*
4. Good fortune and the future: *Apollo*
5. Good personal health and well-being, strength & courage: *Hercules*
6. Justice and retribution: *Nemesis*, *Nemesis Praesente*
7. The Roman state & the Roman people: *Jupiter*, *Pantheus*, *Pietas*, *Serapis*
8. The town: *Genius Coloniae/ Municipium*
9. The gods of the Underworld: *Di Manes*, *Di Ineri*, *Dis Pater*
10. War & military victories: *Mars*, *Victoria*

The fact that such a wide variety of deities are recorded testifies to the individuality of these dedications, but the fact that the themes and values they represent are seen

repeatedly throughout demonstrates the common goals between the citizens of these settlements.

There is little to suggest any patterning amongst the distribution of these dedications due to the small numbers preserved. The greatest variety is seen at Italica, doubtless in part due to the number of *tituli sacri* preserved in comparison with other settlements. Most of the sites preserve *tituli sacri* to only either 1 or 2 different deities within any one period with the exception of Italica, Hispalis in the Flavian and post Flavian period and Carmo in the 2nd to early 3rd Century AD. The dedications seem to make sense in the context of the nature of the settlement as might be expected due to the attributes of the deities revered. Those deities invoked which fall in the categories of commerce and profitability, Minerva⁸⁷ and Bonus Eventus⁸⁸ at Salpensa and Astigi reflect the very real importance of trade and commercial prosperity in the economic stability of the urban community. Similarly deities associated with agricultural fertility received dedications at Italica⁸⁹ and Hispalis⁹⁰ as a result of the importance of a profitable harvest to both individual and provincial economies. Dedications of this nature might have been expected further east along the valley within the main areas of agricultural production. Another common group which appears in a number of guises is the mother goddess. Eastern cults such as Isis were often taken up by the army and these are seen at Italica.⁹¹ Several of the manifestations of creator and protector female deities are associated with cults based in other parts of the world, such as the Celtic Matres Aufaniae⁹² and the African Isis. These deities contrast with the overtly Greco-Roman Jupiter,⁹³ Mars,⁹⁴ Apollo⁹⁵ and Hercules.⁹⁶ Early cults were established to Apollo at Italica and Dis Pater at Munigua.⁹⁷ These two dedications are informative in their origins, Apollo introduced from the Roman world and located within the context of a settlement for veteran

soldiers, and Dis Pater an Italic deity linked to Proserpina⁹⁸ at a site where an unusually Italic form of architecture developed later during the Flavian period. Individual dedications survive before the Flavian period but it is at this time that the evidence begins to display variety in the dedications preserved.

Little can be gleaned from the information relating to the social status of the dedicators. The inscription dedicated to Mars was set up by a *servus publicus* who despite his status would have had a recognised position in the town and therefore does not indicate the spread of these inscriptions to groups of lower social standing.⁹⁹ The higher strata are also evidence through the dedication to Apollo by an *eques*.¹⁰⁰ There is no visible distinction between the deities selected by men and women, and the dedications of *tituli sacri* are evenly spread between the genders.

Evidence for the existence of imperial cults is first visible at Carmo in the early Imperial period several years before the first recorded actual dedication. These monuments are dedications made to *pontifices* of the cults of Augustus and the divine Augustus.¹⁰¹ It is interesting that these arise at Carmo rather than any of the other settlements such as Italica or Hispalis, but this is perhaps an indication of the nature of the community at Carmo in this period of the early 1st Century AD. The earliest recorded cults are of Apollo Augustus at Italica,¹⁰² Mercurius Augustus at Munigua and Orippe¹⁰³ both towns which flourished within the trade network, Victoria Augusta at Celti¹⁰⁴ and Fortuna Augusta at Sيارum.¹⁰⁵ Though few the uptake of these cults appears in the Flavian and post Flavian period and continues into the 3rd Century AD with much the same chronological distribution as the *tituli imperatorum* but also of the *tituli sacri*. The only other sites where such cults have been attested are Hispalis and Ostippo during the 2nd or early 3rd Century AD. Italica has the longest history of imperial cults, and is also one of the most diverse with three cults referenced in the 2nd and early 3rd Century as at Munigua. It is interesting that Hispalis figures negligibly in the distribution of imperial cult dedications despite preserving a wide ranging series of *tituli imperatorum* in the 2nd and early 3rd Centuries. The only site where the

records of cult officials and priests indicate a clear presence as does the archaeological record but there are no preserved dedications is Astigi. Salpensa is the only site where no evidence for imperial cults has been preserved in the extant assemblage but a *titulus imperatorum* exists in the form of a dedication to Nero¹⁰⁶.

The question of the imperial cult whether based at individual towns or as a provincial cult is a particularly complex topic and there is not a large enough assemblage of preserved material to comprehensively assess the validity of these arguments based exclusively on the evidence from the study sites. Only one instance of consistency within the extant material can be noted which might argue for a closer connection with ordinary *tiuli sacri*: the cult of Apollo Augustus is seen at Italica, where the cult of Apollo was documented in the Republican centre. This is also the earliest incarnation of an imperial cult at the town and it continues in use into the 2nd and early 3rd Century AD.

Whilst the request for a provincial cult from Baetica was denied by Tiberius¹⁰⁷, choosing instead to promote the cult of the deified Augustus, it indicates that there was a willingness to participate in these rituals at this early stage. Previous discussions of the nature of the population during this period indicate however that this request likely came from Italian settlers. By the time of Vespasian it appears that the cult was being actively promoted by the state.¹⁰⁸

Analysis of the contexts of these dedications may provide some insight into their association with a specific imperial, provincial cult. From within the study sites at Italica the dedications to Apollo Augustus and Victoria Augusta were made in the context of the Traianeum, the sanctuary building of the imperial cult;¹⁰⁹ the sanctuary building at Munigua has been interpreted as a focus of the imperial cult;¹¹⁰ and an enclosure dedicated to the imperial cult has been found at Astigi.¹¹¹ However, for the majority of cults bearing the epithet of Augustus or Augusta there was no necessity for a specific building, and dedications might be made at shrines to equivalent deities. In reality it appears from the limited evidence within the study sites, that the imperial cult should not be envisaged as a single entity with a single focus, the worship of the

emperor and his family. There is clear evidence at in particular Italica and Astigi for a provincial imperial cult, but the variety of manifestations, and the lack of consistency from one period to the next suggests that in most towns these cults were very localised in character with various significance and focus dependent upon the situation, social character and political persuasion at any one time.¹¹² Local variation in the practise of the imperial cult has also been attested by other research.¹¹³ When the distribution of manifestations of the imperial cult is compared with that of the ordinary cults it becomes clear that whilst there are points of comparison there are also significant differences in the range of sites where inscriptions are recorded in each period and in the variety of dedications.

There is some minor distinction between the deities selected for dedications by members of different social groups. Amongst the inscriptions set up by *liberti* there is a clear affiliation for the imperial cults, the only exception being a dedication to Pietas which itself invokes a sense of duty to the State. Since freedmen had no opportunity to hold public office the imperial cult became a popular means with members of this social group to win recognition. Within the inscriptions set up by freeborn individuals there is recognition of the protective deities of the town, imperial cults, and deities associated with commerce (Minerva) and health and fortune (Fortuna, Salus, Bonus Eventus). The senatorial dedications reflect imperial cults, links to the town, commerce, agricultural fertility, mother goddesses, creation and protection. Minor officials dedicate to the imperial cult, queen goddesses and Liber Pater. Therefore imperial cult dedications are particularly common amongst the freed population whereas dedications to living emperors are seen predominantly in the upper social strata of senatorial and equestrian rank. This difference emphasises the variation in the way that we should interpret dedications to imperial cults which in the lower strata may have functioned more as a means to an individual end, but may have entailed a greater degree of ideological significance for members of the elite.

7.8 *EVIDENCE POTENTIALLY PERTAINING TO URBAN COMMUNITIES AND IDENTIFICATION WITH, IN PARTICULAR, INDIVIDUAL SETTLEMENTS*¹¹⁴

To date the majority of studies dealing with the question of identity in Roman Spain fall into one of two categories. The first deals with the evidence for a widespread cultural identity, and assesses the presence or absence of evidence for ‘Romanisation’ and the validity of that term dependent upon its definition and usage within the context of a particular study area¹¹⁵. Secondly, many studies look at constructs of identity based upon gender, status or ethnicity. Elite identity has often been considered in conjunction with the study area of this thesis¹¹⁶, but to date there has been no attempt to bridge the gap between these smaller scale identities and the larger more generalised identities conceptualised by Romanisation and the like. Within the context of this research therefore I have attempted to take a different approach which considers both traditional categorisations and potential links between social groups which are often studied in isolation. In this way I hope to contribute to a continuing debate surrounding identity in Baetica without repeating many of the current issues.

This research is particularly interested in investigating the evidence for communal identities. The possible existence of a sense of community associated with specific individual settlements has not been considered in great depth before in a study of this type. The question of civic identity is complex since residence does not necessarily entail a conscious recognition of community of place or a community of communion. Inscriptions are one of the few sources of information to potentially provide a means to study the possibilities for community of communion.¹¹⁷ A

¹¹⁴ Tabularised data: Appendix C.9 OCCURRENCES OF GROUP IDENTITIES (DATED AND UNDATED)

¹¹⁵ See the discussion in chapter 3: 3.6 n167. E.g. Blázquez 1974 & 1975; Caballos Rufino, 1986; Salinas de Frías, 1986; Curchin 1988; Blázquez, 1989; Caballos Rufino, 1990; Curchin, 1991; Keay, 1992; Blázquez & Alvar, 1996; Keay, 1998; José Hidalgo et al 1998; Castro López & Gutiérrez Soler 2001; Bendala Galán 2002; Curchin, 2004.

¹¹⁶ Caballos Rufino in particular has been a prominent discussant of the issues surrounding the Spanish elite and in particular the senatorial families e.g. 1989; 1990; 1998; 1999; 2001; 2001a; 2003; 2006. Rodríguez Neila & Navarro Santana, 1999; Navarro Caballero & Demougin, 2001; Focus is normally on social promotion and upward social mobility, the identification of elite social groups within the study sites and their contribution to their resident communities; Stylow in Caballero & Demougin 141-157; Gimeno Pascual 2003.

¹¹⁷ The issue becomes even more contentious when the potential relationship between civic identity and the pre-Roman history of occupation is considered. Much of the discussion surrounding the importance of cultural identity and its impact upon epigraphic conventions has hinged upon assessing

significant number of inscriptions from the Baetican corpus played a role in visibly presenting the urban identity by mentioning the name of a city either as a place of residence or an *origo*, in relation to a municipal cult, or in connection with official groups such as the *decuriones*. Expressions such as these may have played a role in visibly presenting an urban identity and in reinforcing the character of the town through expressions of civic pride. However it is also possible that less overt statements regarding individual identity and personal choice are also indicative of communal identity where they demonstrate a marked similarity between individuals.

Evidence relating to associations between individuals based on membership of specific groups or professions is limited to a few inscriptions from Hispalis and Italica. These inscriptions date from the Flavian period onwards into the 3rd Century AD. Despite the small number of examples these inscriptions testify both to the existence and in some cases persistence of groups within these two towns which not only have a definite communal identity but which demonstrate common purpose and joint activity.

The majority of these groups are constituted from individuals of the same profession, and these professions demonstrate a close relationship with the river. They comprise wine and oil merchants, boatmen, and fabric manufacturers all of which would have been dependent on the river for their livelihoods. The inscriptions with which they are connected include *tituli sacri* and *imperatorum* as well as some instances of *tituli sepulcrales* and *operum publicorum*. These groups were therefore involved in a range of urban activities and the inscriptions provide information relating to some of the relationships around which they were based. An early 2nd Century dedication by the [Vina]ri(i) (wine merchants) of Romula (Hispalis)¹¹⁸ indicates clearly that it resulted from a consensus of decision and action by the use of the term

the ethnic and cultural background of the urban population. Some researchers have argued that these populations were primarily composed of indigenous residents rather than immigrants from Italy with the exception of obvious cases such as the veteran colony established at Italica. Vespasian's letter to the *quattuorviri* and *decurione* of the small town of Sabora (modern Cañete la Real south of the study area) (CIL II 1423) grants them permission to build a town upon the plain, suggesting that until this time the settlement had remained a hilltop site. It has been argued that this suggests that many communities were still residing in hillforts in this period. It has also been suggested that ties to individual settlements based upon tribal systems of loyalty were particularly important in Baetica and that these remained in force and continued from the pre-Roman into the Roman period: *Curchin 1991*.

¹¹⁸ HIS002SC

consistentes.¹¹⁹ The group selected an appropriate deity for the monument, Liber Pater, associated with wine as well as growth and fertility, thereby celebrating their profession and ensuring its continued prosperity. Other inscriptions were dedicated to various deities with the additional epithet of Augustus. Two inscriptions which may well be closely related¹²⁰ are dedications by the daughters of Valerius Valens to Minerva Augusta and Venus Genetrix Augusta.¹²¹ Both inscriptions are set up in honour of the *Corpus Oleariorum* (Association of oil merchants) and presumably their father was a member of this group. The same group was itself responsible for a further monument in Hispalis. This was a *titulus honorarius* dedicated to Marcus Iulius Hermesianus who was, amongst other titles, the Diffusor of oil to the Annona¹²². Even more relevant he was the Curator of the Corpus Oleariorum in Romula Hispalis and the members of that merchant association arranged for the monument to be set up although the cost was eventually returned by his son.

Moving away from merchants and traders, the inscriptions also provide evidence for the existence of two groups of industry: the fabric manufacturers and stone cutters. The Corpus of *Centonari* set up two *tituli imperatorum* to Antoninus Pius in recognition of the grant of permission from the Senate for the existence of a collegia which, according to the *Lex Iulia* was a corpus consisting solely of men of Hispalis¹²³. At Italica, Marcus Caelius Alexander and Lucretius Iulius Paulus gave marble plaques to the *Statio Serrariorum Augustorum* (the imperial stonecutters or sawcutters)¹²⁴.

Other groups associated with professions include the *harenarii* (arena attendants) who set up a funerary memorial in either the late 2nd or early 3rd Century to presumably, a colleague¹²⁵, and the deputies of the *Dispensator Arc(a)e Patrimonii* at Hispalis who commemorated the Dispensator himself Felix, with a funerary altar¹²⁶.

¹¹⁹ Alternative restorations of this inscription might be [scapha]ri(i), [navicula]ri(i), or [olea]ri(i), but the association with Liber Pater suggests *vinarii* is more likely.

¹²⁰ HIS143SC & HIS136SC. The former cannot be dated since its location is unknown, but the information that survives including that of the name of the father and details of design suggests that they were contemporary.

¹²⁵ ITA295TS

¹²⁶ HIS066TS

The largest number of different groups however, is associated with the various boatmen who transported the products of the merchants and manufacturers up and down the river. These take their name from their various vessels. Two *tituli honorarii*¹²⁷ and two *tituli imperatorum*¹²⁸ were set up as statue bases by the *Scapharii* of Hispalis. The honorific monuments were dedications to Sextus Iulius Possessor, the *Procurator Augustorum* responsible for the River Baetis and involved in much of the administration that ensured riverine trade progressed smoothly, and to a military officer Lucius Castricius Honoratus, the *Primus Pilus*, highest ranking centurion and commander of the first cohort. The imperial dedications honoured Antoninus Pius and Marcus Aurelius. The other group of boatmen in Hispalis responsible for setting up inscriptions were the *lyntrari* who are recorded as setting up an inscription to their patron Caius Aelius Avitus¹²⁹. Unfortunately this inscription is undated, but it provides interesting evidence for a community which extended beyond that of an individual settlement since it indicates that the *lyntrari* of Canania, Oducia and Naeva were all responsible for the erection of the honorific monument.

One interesting anomalous group is that of the *equites Romani* who set up an honorific inscription presumably to one of their members using the funds available from subscription collections¹³⁰. This group is significantly different from the others identified so far and is based around social status rather than a specific profession.

A final group observed has been called the funeral *collegium*, the means by which members of society who were not wealthy enough could secure themselves a funerary monument by combining their resources with others. Such societies are never explicitly recorded and likely did not exist in their own right but were attached to other groups such as religious or professional associations. One example from Italica indicates that the monument to Iulianus was paid for jointly by his *collegium* and by his wife¹³¹. In another the monument to Pontius Caecilius Donatus¹³² is referred to as having been set up by his '*frates pientissimi*' and it has been suggested

by Caballos Rufino that rather than referring to his natural brothers, this indicates a relationship with a guild, association or corporation of some kind¹³³.

Inscriptions indicating specific groups within the study sites are not widely preserved but those that are date to periods of prosperity within Italica and Hispalis when it can be assumed that the traders and merchants who form the largest component were flourishing and in a position to put back some of their prosperity into the town. These groups have very clear associations with individual towns and represent small but not necessarily unimportant communities active within individual urban economies.

Some of the largest and most common groups evident in the epigraphic record of the study region are those with which this thesis is primarily concerned - the urban communities identified with city of residence. These groups include incidences of the local *ordo* functioning on behalf of the wider community together with individuals recording their association with a particular place and their fellow residents. Membership of these communities is expressed in a variety of different ways such as the incorporation of an affinity with city of birth into the text of an inscription. This is evidence of the importance of these urban identities throughout life, as individuals sought to retain links with more than one locality.

Several inscriptions record the residents of a particular city as the dedicators of a monument or name the city itself as a personified entity in the role of dedicator. It can be assumed that in these cases local officials were acting on behalf of the community as whole. However they illustrate the existence of a collective identity with which members of individual urban populations could associate themselves. These collective entities are not restricted to the community as a whole but are also seen to reflect specific groups such as the plebs. In several inscriptions the identity of the town is repeatedly named, often in a variety of incarnations including the superlative *splendidissimus*. It is interesting to compare the distribution of occurrences of the urban name with occurrences of dedications to the Genius (protective deity) of the town. These appear at Italica,¹³⁴ Munigua¹³⁵ and Siarum,¹³⁶

all sites where a range of different urban groups have been identified. The evidence from Munigua is particularly worth noting due to the very high instance of indications of the role of the *ordo* as well as the municipium and its residents in the erection of the large number of honorific monuments found at the site.

Inscriptions such as this can only have helped to reinforce the character of the town and visibly present an urban identity.

7.9 CONCLUSIONS

This chapter has identified a series of communities and relationships between settlements by considering patterns in the use and design of inscriptions. Groups of individuals have been characterised by associated shared epigraphic characteristics. This study has utilised the evidence for these individual identities to reconstruct relationships between them and the communities from which they originate, thereby reconstructing a social context within which we can better understand the use of these monuments within the towns of the study area. The benefit of this approach is that it holds possibilities for a better understanding of why specific groups might make individual choices about the nature of their epigraphic monuments such as inscribing to particular deities or utilising certain formulae.

This analysis has demonstrated that there are often distinct differences in the ways that various social groups utilised inscriptions within the study area. It has shown that a range of towns stood out in different periods against the generalised background. The precise nature of the history of urban and social development at each of the sites was a major factor in influencing the development of its epigraphic culture. Towns such as Italica stand out largely due to the superior preservation of material and wider range of groups responsible for setting up inscriptions. Other sites such as Hispalis and Munigua are recognisable for the greater proportion of non-funerary monuments which they preserve which allows patterns in other types of monuments to be observed more clearly. It is clear that the epigraphic character of Munigua is particularly unusual and probably derives from the origin of its population facilitated by its wealth and prosperity. At Astigi it is noticeable that unusual patterns appear in the distribution of inscribed material usually comprising the continuance in selection of particular types of monument where other sites have abandoned them at similar periods. At Celti the character of the designs engraved on funerary monuments provides this settlement with a very distinctive epigraphic assemblage. Therefore the use of inscribed monuments could function extensively as a means for asserting the individuality of certain towns amongst those studied here.

The importance of the geographical context and the landscape of the study area on the hierarchies between towns and the locations of individual settlements has been demonstrated throughout the research presented here. The importance of

situation, visibility and control of resources was I believe a major factor in developing connections between towns, and those connections can be seen through the inscribed material in, for example, the use of the same workshops, the physical movement of people, the extent of the administration, and the use of the same resources such as stone.

Communities of place have been identified with the urban populations of individual settlements as demonstrated by the shared use of certain epigraphic characteristics. Even though this may be to some extent due to the use of the same epigraphic workshops these communities of place are still valid as they indicate a relationship based on location. Communities of place have been shown to extend beyond individual settlements where patterns in the data have demonstrated a recognisable regional character associated with the *conventus*, the province or looser geographical regions such as defined by proximity to the river. At various points in the distribution patterns discussed above Celti sometimes appears to be anomalous in patterns distinguishing between the east and west of the study region interpreted as regional differences between Hispalensis and Astigitanus. This variation relates to its location on the river Baetis and it is this aspect of its location which in some cases dictates its character further than its eastern location. Regional communities of place are therefore not rigid and indicate that an individual's identity within those communities was multi-layered.

Communities of interest have been identified by their specific involvement in the erection of inscriptions such as the professional associations. These in particular are elective groups where membership is sought by individuals and results in an active desire to express that facet of their identity. Other elective communities of interest identified include magisterial groups such as the *ordo*, those connected by social status such as the *equites Romani* at Carmona¹³⁷, and those collaborating in the production of commemorative or honorific monuments whether related by blood, ties of patronage or simply by their relationship to the individual commemorated. Other communities of interest have been identified in the distributions of shared religious belief and worship of individual deities. One of the most important communities of interest in the study area was the native social elite who entered the Roman senate, all of whom are connected by their wish to succeed and desire for self

¹³⁷ CAR003TH.

promotion. Social competition therefore can be seen as an instigator of communities of interest.

The most difficult type of community to identify is that of communion. The members of these communities experienced membership as a common identity and were cognisant of their connection with other members of the same group. The identification of a 'Roman' identity might fall into this category were it possible to ascertain for certain if such an ideological identity really existed amongst the population. It might be argued that adherence to the imperial cult in particular worship of the emperor was indicative of acceptance of a belief and identity system beyond the adoption of material artefacts or styles of architecture. A potentially more reliable source of evidence is the existence of senators of Spanish origin actively participating in the political and administrative structure of the province and of individual cities. Whilst this element of their identities should not be seen to negate other, perhaps Spanish identities, it is clear that these individuals must have experienced their membership as a shared identity. Communities of communion are particularly closely associated with identity since they entail awareness and appreciation of group membership on a level that is not necessarily felt by communities of place and interest. They exist alongside communities of place and interest but incorporate an element of perceived belonging which is very important to the research carried out here.

None of the communities identified are mutually exclusive. Even though social status had clearly defined boundaries, social mobility was facilitated by the system so that those boundaries could be crossed and actively were so by those pursuing political careers. In many cases however the boundaries would not have been distinct and identities would have incorporated elements of status, origin, residence and belief which may have varied in importance between individuals and in different circumstances. The complexities of these identities have been fundamental to our understanding of the nature of social networks within the study area.

The relationships identified here are only a small subset of those present throughout the communities of the study sites and the study area as a whole. Those identified have been prioritised as a result of their association with the elements selected for detailed study and cannot be fully characterised by this study as they are

based upon a sample of the available evidence from the study region which is itself a sample of the data from the province as a whole. These limitations do not comprise the data or the hypotheses presented here. This thesis was designed in part as an exploration of the possibilities for a new methodology for the study of inscriptions within their archaeological and social context and did not set out to produce a definitive characterisation of the social communities in Baetica based on an analysis of their inscriptions. The research has demonstrated the applicability of the methodology to the study material and presents a starting point for further study.

8: *URBAN CONNECTIVITY*

The research presented here set out to devise a new strategy for looking at Latin inscriptions within the context of the Roman province of Baetica, and specifically the area surrounding the lower and western section of the river Guadalquivir valley. Epigraphy as a discipline has suffered from a certain amount of stagnation, and the intention was to take advantage of the fist of the newly revised publications of the material, and bring the study of this material up to date in terms of theory, methodology and technology. It was hoped that this would demonstrate the continued value and relevance of including inscriptions in archaeological investigations of social change, but in a way which allows more subtle patterns within the use of these monuments to be highlighted against the more generalised pictures of density and distribution of the material.

8.1 ASSESSMENT OF PROBLEMS ASSOCIATED WITH THE DATA AND HOW LIMITATIONS IN THE ANALYSIS WERE HANDLED

The research encountered several problems, but the careful planning of the methodology and the extensive research into the theory surrounding the relationship between material culture and society allowed these to be overcome without necessitating the abandonment of any data.

One of the most complex problems associated with this study was that of the dating of the monuments and correlating them with the information for the phases of occupation at the sites. The level of knowledge and detail regarding this information varied between settlements according to their location with respect to modern towns, and the amount of investigation to which they have been subjected. This therefore required a certain amount of subjectivity and at times alteration of phases and assignation of inscriptions into different periods when initial trials indicated that they did not best fit the evidence available.

There is likely to be a certain amount of inconsistency between the data from the volumes of CILA and CIL II² in the establishment of the background in chapter 5, followed by CIL II² alone for the detailed discussions. The former volumes are known to include frequent mistakes and obviously do not include more recently

discovered material. Given the time constraints of this study and the state of research regarding the forthcoming volume of CIL II² on Hispalensis, it was simply not possible to incorporate a greater amount of the new information. The selection of CILA however provides at least a recognisable single standard from which to assess the information at this stage, and a relatively quick way to incorporate a more general level of information into the database.

Whilst it might be argued that other sites should have been selected in some cases, such as for example Urso in preference for Cerro del Pascualejo, it should be remembered that this research was designed to contribute to a wider project with aims extending beyond the objectives of this one aspect. The sites selected were dictated by the requirements of the project as a whole, and due to problems associated with gaining permission to carry out fieldwork in some areas had to be re-evaluated in the early stages in order to find suitable alternatives. The inclusion of all the study sites is therefore valid within this context.

8.2 THE VALIDITY OF THE METHODOLOGY

The research benefitted greatly from the application of an archaeological methodology which at all stages enabled the inscriptions to be viewed as a combination of different sources of information. This meant that when one aspect proved less useful or more difficult to interpret due to loss of information, the interpretation of other elements was able to contribute to the investigation in a different way.

The detailed analysis of inscriptions, particularly those in a very fragmented state, requires a great deal of specialist knowledge and many hours of practical experience with the monuments. This study could not have been completed without the excellent work carried out by Armin Stylow and his team. One of the values in this research is its function as a bridge between mutually dependent disciplines which can benefit greatly from the experience and specialist knowledge of the other. An appreciation of the value of archaeological information was integral to the level of detail incorporated wherever possible to the entries in the revised volumes of CIL II, and in turn the potential of that information to add to a study of social networks in Baetica has been realised here.

The methodology has demonstrated that small scale quantitative analysis can be carried out on assemblages of inscriptions, provided that it is preceded by thorough research of the contextual background. In addition, the methodology demonstrated strongly that this type of research can be utilised to great effect as part of an integrated strategy of investigation along with a series of other methods and sources of material.

In general the results from spatial analyses of the material from individual settlements provided sound confirmation for theories based on analysis of other elements rather than radical new interpretations of their own. This does not in any way reduce the value of having carried out these analyses, and results from the poor preservation of information rather than the methodology. The instances where they have proved to be most enlightening are associated with those sites which have benefitted from sustained programmes of investigation, even if on a rescue basis. It is essential that the discipline persists in continuing to adopt this approach, so that not only will any information that comes to light assist in rebuilding spatial contexts and patterns further, but so that it will also encourage detailed recording of archaeological contexts when new inscriptions are discovered. In this way approaches to epigraphic material can only continue to develop, modernise and keep pace with the theory and technology in other areas of social science which can be of immeasurable value to the discipline.

The results of the analyses identifying correlations between the use of various elements, and the wider spatial analyses looking for connections between individual settlements worked exceptionally well despite the various limitations within the data. Both patterns and anomalies were discerned which could be related to specific historical and occupational developments due to the chronological background upon which the study was based. The study therefore has demonstrated the validity in the application of techniques of statistical and spatial analysis to epigraphic assemblages, provided that they are devised carefully and ask questions that the material is capable of providing answers to.

The methodology was therefore successful in terms of its relationship with the aims of the wider project, to identify potential social networks through an analysis of patterns in material culture. The particular value of the inscriptions in this respect

was their ability, as media for social expression and self-representation, to identify communities around which these networks may have been based.

The research has both contributed to and benefitted from being part of the wider Urban Connectivity project. Both studies received information outside the scope of their own analysis, and in turn contributed to a greater depth of re-contextualisation which enabled interpretations of specific patterns to be offered in areas which otherwise might have remained inconclusive.

8.3 CONTRIBUTION TO EPIGRAPHY AS A DISCIPLINE AND THE STUDY OF BAETICAN INSCRIPTIONS

The contributions made by this research will be discussed alongside those of the wider project¹³⁸ where relevant to the objectives of this thesis.¹³⁹ These interim interpretations provide an alternative data source with which to compare the conclusions drawn from the analysis carried out here and further contextualise the discussion of the social relationships and networks identified.

8.3.1 *Temporal distribution and urban history*

The research has clearly demonstrated that the generalised patterns for the temporal distribution of inscriptions do not hold true for individual sites and are suggestive of a more widespread motivation for the erection of inscriptions than is in fact the case. The in depth analysis of individual settlements demonstrated the close link between the relative frequencies of inscriptions and the specific details of urban history and development. Periods associated with intense building programmes and monumentalisation of individual settlements are those to which larger quantities of inscriptions have been dated. The wider project has compared the assemblage from Celti to that from a range of other sites in the region, of which Hispalis is the only settlement to demonstrate a similarly low proportion of preserved material prior to the 1st Century AD¹⁴⁰. The sudden rise in numbers of preserved inscriptions in the later 1st Century coincides with the first major period of urban expansion. Urban

¹³⁸ Henceforth, in order to avoid confusion, the wider AHRC funded Urban Connectivity Project will be referred to exclusively as ‘the project’.

¹³⁹ *Keay 2006* presented at the 12th International Congress of Greek and Latin Epigraphy; *Keay & Earl 2006*; *Keay & Earl 2007*.

¹⁴⁰ *Keay 2006*, 765.

history and inscriptions are therefore closely related although in a less direct way than might be expected. Inscriptions are usually viewed as an important and indicative element of urbanisation but the research conducted here links inscriptions and urbanisation through the social factors that largely instigated the erection of inscriptions and arose from the conditions both responsible for and created by urbanisation. The importance of the ethnic and cultural makeup of the local population and in particular the elite has been discussed frequently throughout this thesis. The results have demonstrated that in the earlier periods inscriptions should be attributed to immigrant settlers where the monuments reflect the influx of populations, cultural attributes, ideologies and skills to the region. In the later periods it is clear that native members of the elite classes were largely responsible which alters the way in which these monuments should be interpreted and the significance which can be attributed to their use within Baetica. Changes in the use of inscriptions therefore are concurrent with alterations in the nature and origin of other forms of social practice and material culture and do not occur as a direct result of urbanisation. Neither do they conform to alterations in legal status or other political developments such as changes in the administrative structure, but follow a trajectory determined by the characteristics of the population at each individual settlement.¹⁴¹ There is a firm assertion by the wider project that legal status is only capable of describing constitutional relationships between towns and in fact often excludes those of unknown name from discussion, which further argues in parallel with this thesis for the employment of new techniques of analysis in order to improve our understanding of the connectedness of the study area¹⁴².

Analysis of the urban attributes displayed at each site does not equate the presence of these attributes with legal status, demonstrating that urban attributes may be present in sites without clarified legal status, whereas others with privileged legal status demonstrate an absence of such features¹⁴³. This supports the arguments discussed in chapter 7 for the lack of correlation between urban status and epigraphic assemblages.

¹⁴¹ The wider project concurs with these findings and indicates that urban development was a far more important factor in the development of the use of epigraphy at Hispalis if not also at other sites than was ascription of legal status.

¹⁴² *Keay & Earl 2006, 275-276.*

¹⁴³ *Keay & Earl 2007, 310-311.*

8.3.2 *The geographical landscape of Baetica and its settlement organisation*

The importance of the natural landscape as a factor in these developments has been emphasised, not simply in terms of the availability of localised resources, but as a response to the ability of the landscape to create and support hierarchies between settlements that are particularly subtle and complex. Discussion has tended to focus upon the river Guadalquivir and the Genil as the main natural features around which linear networks might have been derived, but this study has responded to the results of the wider project in asserting that these form only one aspect of the connections between towns.

The results of the wider project demonstrate that in the early period of study the dominant sites were located within the *campiña* rather than along the Baetis as is normally assumed due to the assumption that the river formed the economic focus of the region.¹⁴⁴ This suggests that in fact the rich agricultural soils of the *campiña* were more important and perhaps indicate that a more localised system of distribution of resources was prevalent. The increased use of the river under the Empire coincided with the requirements of a wider distribution network and one which involved significant exports of the province's cash crop – olive oil¹⁴⁵. These patterns are supported by the distribution of material amongst the study sites where the earliest inscriptions tend to occur in the central and southern area of the study area, located at greater distances from the main rivers with the exception of Italica, Hispalis and Orippe, and only subsequently develop a closer association with sites along the Baetis. It is interesting to note however the reverse pattern demonstrated by the examples of euergetism in which the earliest inscriptions are associated with the major centres along the Baetis and in the Sierra Morena in the 1st Century AD such as Italica, and that subsequently during the 2nd and 3rd Centuries they develop away from this core area¹⁴⁶.

The wider project also analysed the relative densities of urban settlements in the vicinity of both Carmo and Urso, finding that this was higher around Urso. In conjunction with the variation in material culture at each site this was deemed to be significant¹⁴⁷. The study also identified a tendency for larger imperial towns to

cluster in the *campiña* away from the Baetis and the Singilis. The present study is not so well equipped given the selection of its case studies to address this particular issue. However the results do indicate at various stages the importance of Siarum as well as Carmo, both located away from the two main rivers. As a product of the case studies selected the distributions of material do demonstrate a greater clustering of sites with small samples of epigraphic assemblages in the eastern section of the study area, nearest to Urso. The smaller sites were included by the methodology as a way of dealing with the selection of sites with very small and largely residual assemblages. It may be that this is a feature of the sites in this area, but it must be stressed that the results from the thesis are not sufficient to either argue for or against this hypothesis.

An area that this research has highlighted for further study surrounds the density of sites of unknown name in the southern half of the *campiña*. Many of these sites fall under the category of urban as investigated within the remit of the wider project, but appear to have preserved no epigraphic record. The inscriptions from these sites may be recorded as *tituli agri* and attributed to the larger, more typically urban settlements when they have not been located in secure primary contexts such as to indicate the existence of a settlement with its own epigraphic tradition however minor. This problem is compounded by the often largely residual nature of the epigraphic material found away from the main urban centres.

The next analysis of the wider project concentrated on visibility and the effect of the geographical landscape of the Sevillian *campiña*, particularly south of the area between the Alcores to Astigi, upon this characteristic of the sites in question. In this region most sites were highly visible and had good visibility of their neighbouring sites. Sites in the foothills of the rising elevation of the Sierra Morena and Sierra de Grazalema foothills were well hidden but had good visibility themselves. The lowest visibility was exhibited by sites between the Sierra Morena foothills and the second terrace on the south side of the Guadalquivir. The greatest visibility was associated with prominent sites in the landscape such as Carmo and Urso as well as a few others located on the periphery of the study area¹⁴⁸. The sites identified by the study of urban hierarchies as privileged, namely Carmo, Urso,

¹⁴⁸ Keay & Earl 2007, 317-318

Astigi and Hispalis, demonstrate opposite poles as far as visibility is concerned¹⁴⁹. In the *campiña*, towns which were located close to major centres tend to be less visible within the landscape than those located at a distance. This is interpreted as an indication of the importance of the *campiña* as a resource and the potential for dispute between the major centres as regards its control and exploitation. The reduced visibility of the sites along the Baetis and Singilis is associated with less intensive settlement in the Iberian period and it is suggested that this indicates less centralised control¹⁵⁰.

The division into the *conventus* districts demonstrates an awareness and understanding of geographical realities¹⁵¹. This knowledge allowed the administration to maintain existing networks whilst restructuring them according to their own requirements. In this way the existing hierarchies were exploited for administrative and ideological advantage and adapted where necessary¹⁵². As far as this research is concerned, this makes sense of some of the broad scale patterns seen amongst the epigraphic assemblage of the study region as a whole. These sometimes indicate that a series of different characteristics can usually be associated with and are nominally seen to follow the divisions of the *conventus* boundaries. This makes little sense unless the *conventus* divisions can be seen to respond to pre-existing networks determined by the local geography and topography. The factors governing these connections would also have affected the distribution and employment of various epigraphic characteristics as a result of differential traditions, contact and movement between sites in these regions.

8.3.3 Connectivity and networks

The analysis of ‘closeness’ and ‘betweenness’ of urban sites along the Baetis and Singilis in conjunction with the Via Augusta¹⁵³ demonstrated that the conjunction of these two networks brought the sites in the region into a multimodal network which emphasised both the closeness and betweenness of Hispalis and

¹⁴⁹ Keay & Earl 2007, 317-318.

¹⁵⁰ Keay & Earl 2007, 317-318.

¹⁵¹ Keay & Earl 2007, 321ff.

¹⁵² Keay & Earl 2007, 321ff.

¹⁵³ This is a measurement of topological distance and probability that a town will be encountered by passing traffic taking the shortest route between two other settlements within the network.

Astigi at either extent¹⁵⁴. Their significance appears to derive from their position as intersecting nodes, providing access to both riverine and land based communication routes, thereby ensuring that they formed key locations within the regional network. The sites of Carmo, Hispalis, Italica, Ostippo and Astigi with high levels of centrality and physical connectivity as intersecting nodes in the communication networks score highly in this respect in comparison with sites such as Gandul or Siarum and were the most likely of all the sites with epigraphic assemblages in the study area to have played key regional roles¹⁵⁵. Each of these sites stands out in the analysis presented in chapter 7 as a result of anomalous patterns in the distribution of various epigraphic elements. In particular the interfaces between networks at Hispalis and Astigi resulted in the locations of these settlements as major catalysts of change¹⁵⁶. Whilst Hispalis had previously held significant status as a trading centre, Astigi was barely known and hence its development can be seen to have responded to a new set of circumstances. The change therefore in the use of existing networks means unsurprising that riverine towns came to be prominent over those in the *campiña* with larger numbers of urban attributes and indicators of status. The wider project argues that Carmo was neutralised by the route of the Via Augusta between the major centres of power, and that Urso was marginalised by Astigi. The study cannot comment on the epigraphic repercussions at Urso, but it does demonstrate that a varied use of epigraphy remained a feature of the assemblages from Carmo which may have resulted from a perceived need to reinforce expressions of individual, community and even urban identity in the face of its new situation. This may account for the pattern amongst the euergetic inscriptions discussed above where the distribution favours sites along the river in the 1st Century AD, subsequently moving away from these node settlements in the 2nd and 3rd Centuries AD.

The inscriptions reflect the interconnectedness of the study region and of Baetican society, demonstrating social relationships on several levels from the family to that of the town itself and extending to groups between towns. The results of the wider project are suggestive of a network based upon local and regional relationships with the potential for an increased number of and stronger links

¹⁵⁴ Keay & Earl 2007, 315-317.

¹⁵⁵ Keay & Earl 2006, 285.

¹⁵⁶ Keay & Earl 2007, 321ff.

between centres located in the *campiña* than along the main rivers. The epigraphic assemblages however seem to be associated in larger densities with the riverine sites due to their location at junctions of major roads and the river. The epigraphic evidence suggests a series of predominantly localised connections; therefore whilst the Baetis, Singilis and the Via Augusta promoted larger scale movement and connections, the everyday realities revolved around small scale networks at local or at most regional level as far as the relationships evidenced by inscriptions are concerned. This is supported by an analysis of inscriptions recording the intervention of the *Ordo municipalis*, *ordo equester* and *ordo senatorialis* which are dominated by the *ordo municipalis*, indicative of localised and small scale networks of euergetism¹⁵⁷.

8.3.4 *The importance of social interaction and competition*

The results have demonstrated that areas with increased social interaction as a result of, for example, the intersection of routes of communication or the integration of immigrant and native communities also saw increased motivation for inscribed monuments. Woolf has demonstrated the relationship between social interaction, competition and social mobility¹⁵⁸ and argued that the interaction in particular between Roman and non-Roman native communities stimulated new ideas and identities.¹⁵⁹ This reinforces the point made earlier that inscriptions do not directly results from urbanisation, but that urban centres, as a result of their function in the promotion of social, economic and political interaction, therefore become hotpots in the distribution of epigraphic material. MacMullen also argued earlier that the forces instigating the erection of inscriptions were neither political nor economic but social in nature.¹⁶⁰ The results of this research clearly indicate the social factors responsible for the development and spread of epigraphic culture through the study area. The fluid boundaries between some elements of the social hierarchy and the opportunities for mobility and communication can be seen to influence the spread of inscriptions during the study period. In particular the rise of native families to senatorial rank as evidenced at sites such as Astigi, Carmo, Gandul, Hispalis, Italica,

¹⁶⁰ MacMullen 1982, 246.

Munigua and Sيارum provide an indication not only of the importance of these sites within the region, but also demonstrate the spread of epigraphic expression to sites located at the furthest extremes of the study area. The physical routes of communication and improvements to the administrative systems in the province facilitated the erection of an increased number of inscriptions but the motivating factors stem from social aspiration and cultural interaction.

It is therefore crucial to emphasise the role of social competition in determining the rise of epigraphy in Baetica over factors such as legal status or citizenship. In particular competition can be seen to have influenced the levels of homogenisation and variance against the generalised background at individual sites. The research demonstrated clearly that each of the study sites developed an individual epigraphic character within the study period, resulting from the history of urban development, the varied character and experiences of the population, and the motivations to inscribe which were most dominant in different areas. The identification of these individual characteristics within the broader distribution of material across the study area and interpretation of the reasons for their generation was crucial to the research carried out here. Whilst the emergence of individual epigraphic trends associated with specific sites in the study region is partly a reflection of the availability of the skills required for their construction, it also indicates a clear choice by the local population to favour expression in a particular form. This theory is supported by the wider project where the unusual decoration of funerary monuments at Celti is identified by Keay as a particular method in the exploitation of inscriptions for self-representation¹⁶¹. Observance of the high level of standardisation of formulae identified by this research serves to further enhance the ability of the decorative elements to individualise the monuments of Celti. Keay argues for an interpretation which views the numerical bias towards funerary inscriptions in the sample of preserved inscriptions at Celti not just as a result of factors affecting preservation, but in a more positive sense as representative of a conscious and deliberate selection procedure on the part of the urban population of funerary inscriptions as the preferred form of self-representation¹⁶².

8.3.5 Possibilities for continuation of the research

So many questions can be asked of inscribed monuments, and so many presented themselves in the early stages of this research, that it can often be difficult to decide on which elements to focus. No study of this kind can aim to be comprehensive, but it provides a valuable starting point for readdressing the material, and encouraging the employment of different styles and techniques of analysis which might bring the discipline out of its perceived rut and potentially revolutionise the subject. This methodology and analysis should now be expanded to test the validity of these findings across a wider range of sites within the immediate study area, and across the province as a whole. In addition the full range of epigraphic elements should be considered in conjunction with those prioritised for detailed study here. It would be prudent to await the publication of the revised CIL II² volumes for Hispalensis and eventually Gaditanus in order to ensure the highest level of consistency for the data possible. With this increased quantity of data it might be possible to investigate the relationship between individual epigraphic attributes and patterns of material distribution across the province with such methods as correspondence analysis in order to analyse and identify the associations between these variables.

This chapter has demonstrated the value in integrating the analysis from both parts of the project. This cross correlation of the data was achieved easily due to adherence to the same standards of data handling and conforming to the same principles in spatially plotting the data. The networks identified through each course of investigation both complement and contrast with one another, so that their integration provides a much more complete approximation of the various social networks in existence between the urban settlements of the period. The networks identified within the project are not exclusively social and therefore this provides an extra level of contextualisation for the epigraphic material and the networks identified in its use. The various analyses assist in providing possible interpretations and alternative scenarios to understand the patterns identified in other areas.

These initial results indicate a certain amount of overall correlation between the networks identified which is indicative of a series of interconnected, organised communities each with a particular character and identity. The differences cultivated

by individual settlements served to enhance these identities and continually promoted competition within and between urban communities. This resulted in the production of inscriptions as individuals and groups within the population sought to represent themselves and their varying, complex and multi-faceted identities. These identities illustrated their roles and positions within the community and place within the social networks that stemmed from the developments in settlement organisation and hierarchy, political administration, economic interaction and agricultural exploitation that were concurrent with this period of history in the region.

APPENDIX B: DATA TABLES CHAPTER 5**B.1 SIZE OF EPIGRAPHIC ASSEMBLAGES FROM THE SITES OF THE STUDY REGION**

No. of surviving inscriptions	Modern Site Name	Ancient Site Name	Conventus
1	Arroyo Blanco	Unknown	Astigitanus
1	Cañada Afán	Unknown	Astigitanus
1	Castillo de la Monclova	Obulcula	Astigitanus
1	Cortijo del Villar	Unknown	Astigitanus
1	Cortijo Parchilena	Unknown	Astigitanus
1	El Moralejo	Unknown	Astigitanus
1	La Rabia	Unknown	Astigitanus
1	Lantejuela	Unknown	Astigitanus
1	Los Canterones	Unknown	Astigitanus
1	Los Castaños	Unknown	Astigitanus
1	Los Castellares	Unknown	Astigitanus
1	Los Cerverales	Unknown	Astigitanus
2	Arroyo Granado	Unknown	Astigitanus
2	Cerro del Agua	Carula	Astigitanus
3	Cerro del Pascualejo	Unknown	Astigitanus
3	Isla del Castillo	Municipium Segovia	Astigitanus
3	Maribañez	Unknown	Hispalensis
5	circa Estepa	Ostippo	Astigitanus
5	Cortijo de Consuegra/ Cerro de la Camorra	Munda	Astigitanus
5	San Juan de Aznalfarache	Osset Constantia Iulia	Hispalensis
6	Alcolea del Rio	Municipium Flavium Canania	Hispalensis
6	Cerro de la Atalaya	Unknown	Astigitanus
6	Cerro del Cincho	Basilippo	Hispalensis
6	Morón de la Frontera	Lucurgentum Genius Iulii	Hispalensis
7	Mesa de Lora	Oducia, Municipium Flavium	Hispalensis
9	Coria del Rio	Caura, Civitas Stipendiaria	Hispalensis
10	Castillo de Alhonor	Unknown	Astigitanus

Appendix B

10	Lora del Rio	Axati, Municipium Flavium	Hispalensis
11	La Saetilla	Segida Augurina	Astigitanus
12	El Casar or Torre de Águila	Salpensa or Siarum	Hispalensis
13	Herrera	Unknown	Astigitanus
14	Villanueva del Rio/Peña de la Sal	Municipium Flavium Arva	Hispalensis
16	El Casar	Municipium Flavium Salpensanae	Hispalensis
17	Cantillana	Municipium Flavium Naeva	Hispalensis
21	Torre de los Herberos	Orippe, civitas stipendiaria	Hispalensis
22	Estepa	Municipium Flavium Ostipponensis	Astigitanus
26	circa Peñaflor	Celti	Hispalensis
27	El Gandul	Municipium Irippe	Hispalensis
40	Possibly Sevilla	Colonia Romula Iulia Hispalis	Hispalensis
44	Torre de Águila	Siarum, Fortunaes Siarenses	Hispalensis
47	Alcalá del Rio	Ilipe Magna	Hispalensis
78	Castillo de Mulva	Municipium Flavium Muniguense	Hispalensis
81	Osuna	Colonia Genetiva Iulia (Urso)	Astigitanus
101	Peñaflor	Celti	Hispalensis
103	Carmona	Carmo, municipium ignotum	Hispalensis
107	Sevilla	Colonia Romula Iulia Hispalis	Hispalensis
130	Écija	Colonia Augusta Firma Astigi	Astigitanus
299	Santiponce	Colonia Aelia Augusta Italica	Hispalensis

B.2 CHRONOLOGICAL DISTRIBUTION OF PRESERVED INSCRIPTIONS

Modern Site Name	Ancient Site Name	Time periods

APPENDIX C: DATA TABLES CHAPTER 7**C.1 THE PERIOD DURING WHICH EPIGRAPHY FIRST BEGAN TO BE USED FREQUENTLY**

Modern Site Name	Generalised phase	No. Surviving Inscriptions
Carmona	Republican	1
Castillo de Alhonor	Republican	6
Cerro de la Atalaya	Republican	3
El Casar or Torre de Águila	Republican	1
Santiponce	Republican	2
Torre de Águila	Republican	1
Carmona	Republican/ Early Imperial	1
Cortijo de Consuegra/ Cerro de la Camorra	Republican/ Early Imperial	1
Possibly Sevilla	Republican/ Early Imperial	2
Santiponce	Republican/ Early Imperial	2
Sevilla	Republican/ Early Imperial	1
Torre de Águila	Republican/ Early Imperial	2
Torre de los Herberos	Republican/ Early Imperial	1
Carmona	Augustan	5
Écija	Augustan	8
Herrera	Augustan	1
Los Canterones	Augustan	1
Santiponce	Augustan	5
Torre de Águila	Augustan	1
Arroyo Granado	Augustan & Early Imperial	1
Carmona	Augustan & Early Imperial	20
Castillo de Mulva	Augustan & Early Imperial	2
Cortijo de Consuegra/ Cerro de la Camorra	Augustan & Early Imperial	1
Écija	Augustan & Early Imperial	22
El Casar	Augustan & Early Imperial	1
El Moralejo	Augustan & Early Imperial	1
Estepa	Augustan & Early Imperial	2
Peñaflor	Augustan & Early Imperial	1
Santiponce	Augustan & Early Imperial	5
Torre de Águila	Augustan & Early Imperial	3
Arroyo Granado	Flavian & post Flavian	1

Carmona	Flavian & post Flavian	12
Castillo de Alhonor	Flavian & post Flavian	1
Castillo de Mulva	Flavian & post Flavian	21
Cerro de la Atalaya	Flavian & post Flavian	1
Cerro del Pascualejo	Flavian & post Flavian	1
Écija	Flavian & post Flavian	31
El Casar	Flavian & post Flavian	1
El Gandul	Flavian & post Flavian	3
Estepa	Flavian & post Flavian	2
Lantejuela	Flavian & post Flavian	1
Los Castellares	Flavian & post Flavian	1
Peñaflor	Flavian & post Flavian	24
Possibly Sevilla	Flavian & post Flavian	7
Santiponce	Flavian & post Flavian	34
Sevilla	Flavian & post Flavian	8
Torre de Águila	Flavian & post Flavian	6
Torre de los Herberos	Flavian & post Flavian	1
Carmona	2nd C AD	44
Castillo de Alhonor	2nd C AD	3
Castillo de Mulva	2nd C AD	42
Cerro del Pascualejo	2nd C AD	2
circa Estepa	2nd C AD	4
Cortijo de Consuegra/ Cerro de la Camorra	2nd C AD	3
Cortijo del Villar	2nd C AD	1
Cortijo Parchilena	2nd C AD	1
Écija	2nd C AD	44
El Casar	2nd C AD	6
El Casar or Torre de Águila	2nd C AD	1
El Gandul	2nd C AD	6
Estepa	2nd C AD	16
Herrera	2nd C AD	8
La Rabia	2nd C AD	1
Los Castañares	2nd C AD	1
Los Cerverales	2nd C AD	1
Peñaflor	2nd C AD	63
Possibly Sevilla	2nd C AD	8
Santiponce	2nd C AD	141
Sevilla	2nd C AD	40
Torre de Águila	2nd C AD	17

Appendix C

Torre de los Herberos	2nd C AD	2
Cañada Afán	3rd C AD	1
Carmona	3rd C AD	3
Castillo de Mulva	3rd C AD	2
Écija	3rd C AD	10
El Casar	3rd C AD	2
El Gandul	3rd C AD	6
Estepa	3rd C AD	2
Herrera	3rd C AD	3
Peñaflor	3rd C AD	8
Possibly Sevilla	3rd C AD	8
Santiponce	3rd C AD	62
Sevilla	3rd C AD	5
Torre de Águila	3rd C AD	1
Torre de los Herberos	3rd C AD	1

C.2 THE USE OF PARTICULAR TYPES OF INSCRIBED OBJECT

Modern Site Name	Object Type	Generalised phase	No. Surviving Inscriptions
Carmona	Tabella	Republican	1
Castillo de Alhonor	Instrumentum: Glans	Republican	6
Cerro de la Atalaya	Instrumentum: Glans	Republican	3
El Casar or Torre de Águila	Instrumentum: Glans	Republican	1
Santiponce	Basis statuæ	Republican	1
Santiponce	Pavimentum	Republican	1
Torre de Águila	Cippus	Republican	1
Carmona	Tabula	Republican/ Early Imperial	1
Cortijo de Consuegra/ Cerro de la Camorra	Stela	Republican/ Early Imperial	1
Possibly Sevilla	Stela	Republican/ Early Imperial	1
Possibly Sevilla	Tabula	Republican/ Early Imperial	1
Santiponce	Parallelepipedum	Republican/ Early Imperial	1
Santiponce	Unknown	Republican/ Early Imperial	1
Sevilla	Stela	Republican/ Early Imperial	1
Torre de Águila	Instrumentum: Tegula	Republican/ Early Imperial	1
Torre de Águila	Parallelepipedum	Republican/ Early Imperial	1
Torre de los Herberos	Stela	Republican/ Early Imperial	1
Carmona	Instrumentum: Cista	Augustan	1
Carmona	Murus	Augustan	1
Carmona	Unknown	Augustan	1
Carmona	Urna	Augustan	2
Écija	Basis statuæ	Augustan	2
Écija	Instrumentum: Signacula	Augustan	1
Écija	Parallelepipedum	Augustan	2
Écija	Stela	Augustan	2

Appendix C

Écija	Unknown	Augustan	1
Herrera	Tabula	Augustan	1
Los Canterones	Stela	Augustan	1
Santiponce	Basis statuae	Augustan	1
Santiponce	Instrumentum: Tegula	Augustan	1
Santiponce	Tabula	Augustan	2
Santiponce	Unknown	Augustan	1
Arroyo Granado	Stela	Augustan & Early Imperial	1
Carmona	Basis statuae	Augustan & Early Imperial	4
Carmona	Instrumentum: Cista	Augustan & Early Imperial	2
Carmona	Murus	Augustan & Early Imperial	2
Carmona	Stela	Augustan & Early Imperial	1
Carmona	Tabula	Augustan & Early Imperial	3
Carmona	Unknown	Augustan & Early Imperial	4
Carmona	Urna	Augustan & Early Imperial	4
Castillo de Mulva	Basis statuae	Augustan & Early Imperial	1
Castillo de Mulva	Tabula Hospitalis	Augustan & Early Imperial	1
Cortijo de Consuegra/ Cerro de la Camorra	Herma	Augustan & Early Imperial	1
Écija	Basis statuae	Augustan & Early Imperial	1
Écija	Parallelepipedum	Augustan & Early Imperial	2
Écija	Stela	Augustan & Early Imperial	12
Écija	Stela quadrata	Augustan & Early Imperial	1
Écija	Unknown	Augustan & Early Imperial	6
El Casar	Unknown	Augustan & Early Imperial	1
El Moralejo	Unknown	Augustan & Early Imperial	1

Estepa	Basis statuæ	Augustan & Early Imperial	1
Estepa	Tabula	Augustan & Early Imperial	1
Peñaflor	Tabula	Augustan & Early Imperial	1
Santiponce	Basis statuæ	Augustan & Early Imperial	1
Santiponce	Instrumentum: Tegula	Augustan & Early Imperial	1
Santiponce	Stela	Augustan & Early Imperial	1
Santiponce	Tabula	Augustan & Early Imperial	2
Torre de Águila	Cippus	Augustan & Early Imperial	1
Torre de Águila	Tabella	Augustan & Early Imperial	1
Arroyo Granado	Unknown	Flavian & post Flavian	1
Carmona	Instrumentum: Dolium	Flavian & post Flavian	1
Carmona	Instrumentum: Tegula	Flavian & post Flavian	1
Carmona	Instrumentum: Vas	Flavian & post Flavian	1
Carmona	Tabula	Flavian & post Flavian	7
Carmona	Urna	Flavian & post Flavian	2
Castillo de Alhonor	Instrumentum: Tegula	Flavian & post Flavian	1
Castillo de Mulva	Ara	Flavian & post Flavian	1
Castillo de Mulva	Basis statuæ	Flavian & post Flavian	6
Castillo de Mulva	Instrumentum: Patera	Flavian & post Flavian	1
Castillo de Mulva	Tabella	Flavian & post Flavian	1
Castillo de Mulva	Tabula	Flavian & post Flavian	12
Cerro de la Atalaya	Tabella	Flavian & post Flavian	1

Cerro del Pascualejo	Epistylum	Flavian & post Flavian	1
Écija	Basis statuae	Flavian & post Flavian	3
Écija	Herma	Flavian & post Flavian	1
Écija	Instrumentum: Signacula	Flavian & post Flavian	1
Écija	Parallelepipedum	Flavian & post Flavian	3
Écija	Stela	Flavian & post Flavian	7
Écija	Stela quadrata	Flavian & post Flavian	2
Écija	Tabula	Flavian & post Flavian	4
Écija	Undetermined	Flavian & post Flavian	1
Écija	Unknown	Flavian & post Flavian	9
El Casar	Tabella	Flavian & post Flavian	1
El Gandul	Tabula	Flavian & post Flavian	2
El Gandul	Undetermined	Flavian & post Flavian	1
Estepa	Stela	Flavian & post Flavian	1
Estepa	Tabella	Flavian & post Flavian	1
Lantejuela	Stela	Flavian & post Flavian	1
Los Castellares	Basis statuae	Flavian & post Flavian	1
Peñaflor	Ara	Flavian & post Flavian	1
Peñaflor	Basis statuae	Flavian & post Flavian	1
Peñaflor	Instrumentum: Signacula	Flavian & post Flavian	1
Peñaflor	Parallelepipedum	Flavian & post Flavian	6
Peñaflor	Tabula	Flavian & post Flavian	15

Appendix C

Possibly Sevilla	Ara	Flavian & post Flavian	2
Possibly Sevilla	Tabula	Flavian & post Flavian	5
Santiponce	Basis statuae	Flavian & post Flavian	3
Santiponce	Columna	Flavian & post Flavian	1
Santiponce	Instrumentum: Tegula	Flavian & post Flavian	2
Santiponce	Murus	Flavian & post Flavian	1
Santiponce	Tabula	Flavian & post Flavian	26
Santiponce	Tabula Ansata	Flavian & post Flavian	1
Sevilla	Ara	Flavian & post Flavian	2
Sevilla	Basis statuae	Flavian & post Flavian	4
Sevilla	Cippus	Flavian & post Flavian	1
Sevilla	Unknown	Flavian & post Flavian	1
Torre de Águila	Ara	Flavian & post Flavian	1
Torre de Águila	Tabula	Flavian & post Flavian	4
Torre de Águila	Unknown	Flavian & post Flavian	1
Torre de los Herberos	Tabula	Flavian & post Flavian	1
Carmona	Ara	2nd C AD	3
Carmona	Instrumentum: Later	2nd C AD	2
Carmona	Instrumentum: Tegula	2nd C AD	6
Carmona	Tabella	2nd C AD	2
Carmona	Tabula	2nd C AD	29
Carmona	Undetermined	2nd C AD	1
Carmona	Urna	2nd C AD	1
Castillo de Alhono	Tabula	2nd C AD	2
Castillo de Alhono	Unknown	2nd C AD	1
Castillo de Mulva	Ara	2nd C AD	2
Castillo de Mulva	Basis statuae	2nd C AD	14

Appendix C

Castillo de Mulva	Instrumentum: Tegula	2nd C AD	1
Castillo de Mulva	Parallelepipedum	2nd C AD	1
Castillo de Mulva	Tabula	2nd C AD	24
Cerro del Pascualejo	Parallelepipedum	2nd C AD	1
Cerro del Pascualejo	Tabula	2nd C AD	1
circa Estepa	Tabula	2nd C AD	4
Cortijo de Consuegra/ Cerro de la Camorra	Stela	2nd C AD	1
Cortijo de Consuegra/ Cerro de la Camorra	Tabula	2nd C AD	1
Cortijo de Consuegra/ Cerro de la Camorra	Undetermined	2nd C AD	1
Cortijo del Villar	Stela	2nd C AD	1
Cortijo Parchilena	Stela	2nd C AD	1
Écija	Basis statuæ	2nd C AD	3
Écija	Instrumentum: Fistula	2nd C AD	1
Écija	Instrumentum: Signacula	2nd C AD	1
Écija	Stela	2nd C AD	4
Écija	Tabula	2nd C AD	21
Écija	Unknown	2nd C AD	14
El Casar	Basis statuæ	2nd C AD	1
El Casar	Tabula	2nd C AD	5
El Casar or Torre de Águila	Ara	2nd C AD	1
El Gandul	Basis statuæ	2nd C AD	1
El Gandul	Tabula	2nd C AD	4
El Gandul	Undetermined	2nd C AD	1
Estepa	Basis statuæ	2nd C AD	1
Estepa	Parallelepipedum	2nd C AD	1
Estepa	Stela	2nd C AD	4
Estepa	Tabula	2nd C AD	5
Estepa	Unknown	2nd C AD	4
Herrera	Ara	2nd C AD	1
Herrera	Sigillum	2nd C AD	1
Herrera	Tabula	2nd C AD	6
La Rabia	Stela quadrata	2nd C AD	1
Los Castañares	Stela	2nd C AD	1
Los Cerverales	Tabula	2nd C AD	1
Peñaflor	Ara	2nd C AD	2

Appendix C

Peñaflor	Basis statuae	2nd C AD	4
Peñaflor	Epistylum	2nd C AD	2
Peñaflor	Tabula	2nd C AD	52
Peñaflor	Unknown	2nd C AD	3
Possibly Sevilla	Ara	2nd C AD	2

C.3 THE USE OF PARTICULAR MATERIALS, SPECIFICALLY TYPES OF STONE

Modern Site Name	Generalised phase	Material	Source	Colour	No. Surviving Inscriptions
Carmona	Republican	Lead	Unknown		1
Castillo de Alhono	Republican	Lead	Unknown		6
Cerro de la Atalaya	Republican	Lead	Unknown		3
El Casar or Torre de Águila	Republican	Lead	Unknown		1
Santiponce	Republican	Ceramic	Unknown	Red	1
Santiponce	Republican	Marble	Almadén de la Plata	Ashy (Greyish) with dark veins	1
Torre de Águila	Republican	Limestone	Local to Siarum	Yellow	1
Carmona	Republican/ Early Imperial	Marble	Almadén de la Plata	White	1
Cortijo de Consuegra/ Cerro de la Camorra	Republican/ Early Imperial	Limestone	Unknown	White ?	1
Possibly Sevilla	Republican/ Early Imperial	Granite	Unknown	Grey	1
Possibly Sevilla	Republican/ Early Imperial	Marble	Unknown	Grey	1
Santiponce	Republican/ Early Imperial	Limestone	Unknown	White ?	1
Santiponce	Republican/ Early Imperial	Limestone	Unknown	Yellowish	1
Sevilla	Republican/ Early Imperial	Marble	Unknown	Black	1
Torre de Águila	Republican/ Early Imperial	Clay	Unknown	White	1

Appendix C

Torre de Águila	Republican/ Early Imperial	Limestone	Unknown	Yellow	1
Torre de los Herberos	Republican/ Early Imperial	Sandstone	Unknown	Yellow	1
Carmona	Augustan	Clay	Unknown	Unknown	1
Carmona	Augustan	Lead	Unknown		1
Carmona	Augustan	Limestone	Unknown	Unknown	1
Carmona	Augustan	Marble	Unknown	White	1
Carmona	Augustan	Paint	Unknown	Unknown	1
Écija	Augustan	Clay	Unknown	Terracotta	1
Écija	Augustan	Limestone	Unknown	Ashy (Greyish)	1
Écija	Augustan	Limestone	Unknown	White ?	1
Écija	Augustan	Limestone	Unknown	Yellowish	1
Écija	Augustan	Marble	Unknown	Dark (black)	1
Écija	Augustan	Sandstone	Unknown	Yellowish	1
Écija	Augustan	Unidentified Stone	Unknown	Unknown	2
Herrera	Augustan	Limestone	Unknown	Bluish grey	1
Los Canterones	Augustan	Sandstone or Limestone	Unknown	Purple	1
Santiponce	Augustan	Clay	Unknown	Unknown	1
Santiponce	Augustan	Marble	Unknown	Pink	1
Santiponce	Augustan	Marble	Unknown	Unknown	1
Santiponce	Augustan	Sandstone	Unknown	Unknown	1
Santiponce	Augustan	Unidentified Stone	Unknown	Unknown	1
Arroyo Granado	Augustan & Early Imperial	Sandstone	Unknown	Ashy (Greyish)	1
Carmona	Augustan & Early Imperial	Lead	Unknown		4
Carmona	Augustan & Early Imperial	Limestone	Local to Carmona	Grey	1
Carmona	Augustan & Early Imperial	Limestone	Unknown	Unknown	2
Carmona	Augustan & Early Imperial	Marble	Unknown	White	2

Appendix C

Carmona	Augustan & Early Imperial	Marble	Unknown	White ?	2
Carmona	Augustan & Early Imperial	Marble	Unknown	White with pink veins	1
Carmona	Augustan & Early Imperial	Paint	Unknown	Red	1
Carmona	Augustan & Early Imperial	Paint	Unknown	Unknown	1
Carmona	Augustan & Early Imperial	Unidentified Stone	Unknown	Black	1
Carmona	Augustan & Early Imperial	Unidentified Stone	Unknown	Unknown	3
Castillo de Mulva	Augustan & Early Imperial	Bronze	Unknown		1
Castillo de Mulva	Augustan & Early Imperial	Granite	Unknown	Unknown	1
Cortijo de Consuegra/ Cerro de la Camorra	Augustan & Early Imperial	Limestone	Unknown	Reddish with clear veins	1
Écija	Augustan & Early Imperial	Limestone	Unknown	Ashy (Greyish)	4
Écija	Augustan & Early Imperial	Limestone	Unknown	Bluish grey	1
Écija	Augustan & Early Imperial	Limestone	Unknown	Pale yellow (lurido)	1
Écija	Augustan & Early Imperial	Limestone	Unknown	Unknown	2
Écija	Augustan & Early Imperial	Limestone	Unknown	White ?	3
Écija	Augustan & Early Imperial	Limestone	Unknown	Yellowish	1
Écija	Augustan & Early	Marble	Unknown	White ?	1

	Imperial				
Écija	Augustan & Early Imperial	Sandstone	Unknown	Unknown	1
Écija	Augustan & Early Imperial	Unidentified Stone	Unknown	Unknown	8

C.4 THE USE OF DECORATIVE ELEMENTS WITHIN THE TEXT AND UPON THE OBJECT ITSELF

Modern Site Name	Generalised phase	Decoration Description	Engraved or Relief?	No. Surviving Inscriptions
Carmona	Republican	No decoration observed/recorded	Unknown	1
Castillo de Alhonz	Republican	No decoration observed/recorded	Unknown	6
Cerro de la Atalaya	Republican	No decoration observed/recorded	Unknown	3
El Casar or Torre de Águila	Republican	No decoration observed/recorded	Unknown	1
Santiponce	Republican	Geometric border	Neither	1
Santiponce	Republican	No decoration observed/recorded	Unknown	1
Torre de Águila	Republican	No decoration observed/recorded	Unknown	1
Carmona	Republican/ Early Imperial	No decoration observed/recorded	Unknown	1
Cortijo de Consuegra/ Cerro de la Camorra	Republican/ Early Imperial	Recessed epigraphic field	Relief	1
Possibly Sevilla	Republican/ Early Imperial	Recessed epigraphic field	Relief	1
Possibly Sevilla	Republican/ Early Imperial	Sculptured border	Relief	1
Santiponce	Republican/ Early Imperial	No decoration observed/recorded	Unknown	1
Santiponce	Republican/ Early Imperial	No decorative elements utilised	Neither	1
Sevilla	Republican/ Early Imperial	No decorative elements utilised	Neither	1
Torre de Águila	Republican/ Early Imperial	3 concentric circles	Relief	1

Appendix C

Torre de Águila	Republican/ Early Imperial	No decorative elements utilised	Neither	1
Torre de Águila	Republican/ Early Imperial	Sculptured border	Relief	1
Torre de los Herberos	Republican/ Early Imperial	No decorative elements utilised	Neither	1
Carmona	Augustan	Carved feet on urna	Relief	1
Carmona	Augustan	No decoration observed/recorded	Unknown	2
Carmona	Augustan	Sculptured border	Relief	1
Écija	Augustan	No decoration observed/recorded	Unknown	5
Écija	Augustan	No decorative elements utilised	Neither	3
Herrera	Augustan	No decoration observed/recorded	Unknown	1
Los Canterones	Augustan	Recessed epigraphic field	Relief	1
Los Canterones	Augustan	Two incised lines forming inverted V shape	Engraved	1
Santiponce	Augustan	No decoration observed/recorded	Unknown	4
Santiponce	Augustan	Sculptured border	Relief	1
Arroyo Granado	Augustan & Early Imperial	No decoration observed/recorded	Unknown	1
Carmona	Augustan & Early Imperial	3 dimensional triangular design at base of urn	Relief	1
Carmona	Augustan & Early Imperial	Carved feet on urna	Relief	2
Carmona	Augustan & Early Imperial	Decoration formed of wavy, undulating and zig-zag	Engraved	3
Carmona	Augustan & Early Imperial	No decoration observed/recorded	Unknown	13
Carmona	Augustan & Early Imperial	Prominent cornice and base	Relief	2

Carmona	Augustan & Early Imperial	Sculptured border	Relief	1
Carmona	Augustan & Early Imperial	Solid bands sculpted running horizontally	Relief	1
Carmona	Augustan & Early Imperial	Virgula/ae utilised as punctum/a	Engraved	1
Castillo de Mulva	Augustan & Early Imperial	Cornice carved with palm fronds on either side	Relief	1
Castillo de Mulva	Augustan & Early Imperial	No decoration observed/recorded	Unknown	1
Cortijo de Consuegra/ Cerro de la Camorra	Augustan & Early Imperial	Inlaid decoration	Neither	1
Écija	Augustan & Early Imperial	No decoration observed/recorded	Unknown	9
Écija	Augustan & Early Imperial	No decorative elements utilised	Neither	4
Écija	Augustan & Early Imperial	Recessed epigraphic field	Relief	7
Écija	Augustan & Early Imperial	Rounded upper edge of stela carved	Relief	1
Écija	Augustan & Early Imperial	Sculptured border	Relief	1
Estepa	Augustan & Early Imperial	No decoration observed/recorded	Unknown	2
Peñaflor	Augustan & Early Imperial	No decoration observed/recorded	Unknown	1
Santiponce	Augustan & Early Imperial	No decoration observed/recorded	Unknown	1
Santiponce	Augustan & Early Imperial	No decorative elements utilised	Neither	3
Santiponce	Augustan & Early	Patera	Relief	1

Appendix C

	Imperial			
Santiponce	Augustan & Early Imperial	Prominent cornice and base	Relief	1

Torre de Águila	Augustan & Early Imperial	No decoration observed/recorded	Unknown	2
Arroyo Granado	Flavian & post Flavian	No decoration observed/recorded	Unknown	1
Carmona	Flavian & post Flavian	Carved feet on urna	Relief	1
Carmona	Flavian & post Flavian	Figurative scene	Relief	1
Carmona	Flavian & post Flavian	Hedera/ae utilised as punctum/a	Engraved	1
Carmona	Flavian & post Flavian	No decoration observed/recorded	Unknown	6
Carmona	Flavian & post Flavian	No decorative elements utilised	Neither	1
Carmona	Flavian & post Flavian	Rounded upper edge of stela carved	Engraved	1
Carmona	Flavian & post Flavian	Sculptured border	Relief	1
Castillo de Alhonz	Flavian & post Flavian	No decoration observed/recorded	Unknown	1
Castillo de Mulva	Flavian & post Flavian	Hedera/ae utilised as punctum/a	Engraved	1
Castillo de Mulva	Flavian & post Flavian	No decoration observed/recorded	Unknown	12
Castillo de Mulva	Flavian & post Flavian	Prominent cornice and base	Relief	6
Castillo de Mulva	Flavian & post Flavian	Puncta resemble crescent moon, straight appendices	Engraved	2
Castillo de Mulva	Flavian & post Flavian	Sculptured border	Relief	2
Cerro de la Atalaya	Flavian & post Flavian	No decoration observed/recorded	Unknown	1

Cerro del Pascualejo	Flavian & post Flavian	Sculptured border	Engraved	1
Écija	Flavian & post Flavian	Architectural moulding of inscribed object	Relief	1
Écija	Flavian & post Flavian	Inlaid decoration	Neither	1
Écija	Flavian & post Flavian	No decoration observed/recorded	Unknown	14
Écija	Flavian & post Flavian	No decorative elements utilised	Neither	4
Écija	Flavian & post Flavian	Recessed epigraphic field	Relief	7
Écija	Flavian & post Flavian	Rounded upper edge of stela carved	Relief	1
Écija	Flavian & post Flavian	Sculptured border	Relief	5
Écija	Flavian & post Flavian	Virgula/ae utilised as punctum/a	Engraved	1
El Casar	Flavian & post Flavian	Moulded border	Engraved	1
El Gandul	Flavian & post Flavian	No decoration observed/recorded	Unknown	2
El Gandul	Flavian & post Flavian	Virgula/ae utilised as punctum/a	Engraved	1
Estepa	Flavian & post Flavian	No decoration observed/recorded	Unknown	1
Estepa	Flavian & post Flavian	Recessed epigraphic field	Relief	1
Lantejuela	Flavian & post Flavian	Recessed epigraphic field	Relief	1
Los Castellares	Flavian & post Flavian	No decoration observed/recorded	Unknown	1
Peñaflor	Flavian & post Flavian	Architectural moulding of inscribed object	Relief	1
Peñaflor	Flavian & post Flavian	Cornice carved with pulvini and rosae	Relief	1
Peñaflor	Flavian & post Flavian	Hedera/ae utilised as punctum/a	Engraved	3
Peñaflor	Flavian & post Flavian	Incised border	Relief	1

Appendix C

Peñaflor	Flavian & post Flavian	No decoration observed/recorded	Unknown	17
Peñaflor	Flavian & post Flavian	No decorative elements utilised	Neither	1
Peñaflor	Flavian & post Flavian	Sculptured border	Relief	1
Possibly Sevilla	Flavian & post Flavian	Cornice carved with pulvini, rosae & floral dectn	Relief	1
Possibly Sevilla	Flavian & post Flavian	Garland	Relief	1
Possibly Sevilla	Flavian & post Flavian	No decoration observed/recorded	Unknown	4
Possibly Sevilla	Flavian & post Flavian	Patera	Relief	2
Possibly Sevilla	Flavian & post Flavian	Praefericulum	Relief	2
Possibly Sevilla	Flavian & post Flavian	Prominent cornice and base	Relief	2
Possibly Sevilla	Flavian & post Flavian	Sculptured border	Relief	3
Santiponce	Flavian & post Flavian	Hedera/ae utilised as punctum/a	Engraved	6
Santiponce	Flavian & post Flavian	Laurea (wreath)	Neither	1
Santiponce	Flavian & post Flavian	No decoration observed/recorded	Unknown	11
Santiponce	Flavian & post Flavian	No decorative elements utilised	Neither	6
Santiponce	Flavian & post Flavian	Prominent cornice and base	Relief	1
Santiponce	Flavian & post Flavian	Puncta resemble crescent moon, straight appendices	Engraved	1
Santiponce	Flavian & post Flavian	Recessed epigraphic field	Relief	3
Santiponce	Flavian & post Flavian	Sculptured border	Relief	6
Santiponce	Flavian & post Flavian	Virgula/ae utilised as punctum/a	Engraved	1
Sevilla	Flavian & post Flavian	Architectural column with corinthian capital	Relief	1

Appendix C

Sevilla	Flavian & post Flavian	Cornice carved with pulvini & spiral decoration	Relief	1
Sevilla	Flavian & post Flavian	Cornice carved with pulvini and rosae	Relief	1
Sevilla	Flavian & post Flavian	No decoration observed/recorded	Neither	1
Sevilla	Flavian & post Flavian	No decoration observed/recorded	Unknown	2
Sevilla	Flavian & post Flavian	Patera	Engraved	1
Sevilla	Flavian & post Flavian	Praefericulum	Engraved	1
Sevilla	Flavian & post Flavian	Prominent cornice and base	Relief	2
Sevilla	Flavian & post Flavian	Sculptured border	Relief	4
Torre de Águila	Flavian & post Flavian	Capricorns (Sign of the Scorpion)	Unknown	1
Torre de Águila	Flavian & post Flavian	Hedera/ae utilised as punctum/a	Engraved	2
Torre de Águila	Flavian & post Flavian	No decoration observed/recorded	Unknown	3
Torre de los Herberos	Flavian & post Flavian	No decorative elements utilised	Neither	1
Carmona	2nd C AD	Cornice carved with geometric design	Relief	1
Carmona	2nd C AD	Cornice carved with pulvini & spiral decoration	Relief	1
Carmona	2nd C AD	Cornice carved with pulvini and rosae	Relief	1
Carmona	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	3
Carmona	2nd C AD	Hederae styled as irises utilised as punctum/a	Engraved	1
Carmona	2nd C AD	No decoration observed/recorded	Unknown	36
Carmona	2nd C AD	No decorative elements utilised	Neither	1
Carmona	2nd C AD	Patera	Engraved	1

Appendix C

Carmona	2nd C AD	Praefericulum	Engraved	1
Carmona	2nd C AD	Prominent cornice and base	Relief	2
Carmona	2nd C AD	Sculptured border	Relief	1
Castillo de Alhono	2nd C AD	No decoration observed/recorded	Unknown	3
Castillo de Mulva	2nd C AD	Border of flowers and vine shoots	Relief	4
Castillo de Mulva	2nd C AD	Cornice carved with pulvini and rosae	Relief	2
Castillo de Mulva	2nd C AD	Decorative hederæ	Engraved	1
Castillo de Mulva	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	2
Castillo de Mulva	2nd C AD	Moulded cornice	Relief	1
Castillo de Mulva	2nd C AD	No decoration observed/recorded	Unknown	21
Castillo de Mulva	2nd C AD	Patera	Relief	5
Castillo de Mulva	2nd C AD	Praefericulum	Relief	3
Castillo de Mulva	2nd C AD	Prominent cornice and base	Relief	8
Castillo de Mulva	2nd C AD	Recessed epigraphic field	Relief	1
Castillo de Mulva	2nd C AD	Sculptured border	Relief	7
Castillo de Mulva	2nd C AD	Sculptured border of ova	Relief	4
Castillo de Mulva	2nd C AD	Urceus	Relief	1
Cerro del Pascualejo	2nd C AD	No decoration observed/recorded	Unknown	1
circa Estepa	2nd C AD	No decoration observed/recorded	Unknown	4
Cortijo de Consuegra/ Cerro de la Camorra	2nd C AD	No decoration observed/recorded	Unknown	2
Cortijo de Consuegra/ Cerro de la Camorra	2nd C AD	Recessed epigraphic field	Relief	1

Appendix C

Cortijo del Villar	2nd C AD	Recessed epigraphic field	Relief	2
Cortijo Parchilena	2nd C AD	Recessed epigraphic field	Relief	2
Écija	2nd C AD	Architectural moulding of inscribed object	Relief	1
Écija	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	7
Écija	2nd C AD	No decoration observed/recorded	Unknown	18
Écija	2nd C AD	No decorative elements utilised	Neither	12
Écija	2nd C AD	Recessed epigraphic field	Relief	2
Écija	2nd C AD	Sculptured border	Engraved	1
Écija	2nd C AD	Sculptured border	Relief	3
Écija	2nd C AD	Virgula/ae utilised as punctum/a	Engraved	1
El Casar	2nd C AD	Architectural moulding of inscribed object	Relief	2
El Casar	2nd C AD	Leaf and floral border	Relief	1
El Casar	2nd C AD	No decoration observed/recorded	Unknown	2
El Casar	2nd C AD	No decorative elements utilised	Neither	1
El Casar	2nd C AD	Sculptured border	Relief	1
El Casar	2nd C AD	Virgula/ae utilised as punctum/a	Engraved	1
El Casar or Torre de Águila	2nd C AD	Cornice carved with pulvini and rosae	Relief	1
El Casar or Torre de Águila	2nd C AD	Palma	Engraved	1
El Casar or Torre de Águila	2nd C AD	Praefericulum	Engraved	1
El Casar or Torre de Águila	2nd C AD	Prominent cornice and base	Relief	1
El Casar or Torre de Águila	2nd C AD	Sculptured border	Relief	1

Appendix C

El Gandul	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	1
El Gandul	2nd C AD	No decoration observed/recorded	Unknown	3
El Gandul	2nd C AD	Sculptured border	Relief	2
Estepa	2nd C AD	Garland	Unknown	1
Estepa	2nd C AD	Leafy boughs, branches and/or vines	Unknown	1
Estepa	2nd C AD	No decoration observed/recorded	Unknown	11
Estepa	2nd C AD	Recessed epigraphic field	Relief	2
Estepa	2nd C AD	Sculptured border	Relief	3
Estepa	2nd C AD	Sculptured border	Unknown	3
Herrera	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	3
Herrera	2nd C AD	No decoration observed/recorded	Unknown	3
Herrera	2nd C AD	Prominent cornice and base	Relief	1
Herrera	2nd C AD	Sculptured border	Engraved	1
Herrera	2nd C AD	Unidentified anaglyph (possibly Punic?)	Engraved	1
La Rabia	2nd C AD	Rounded upper edge of stela carved	Relief	1
La Rabia	2nd C AD	Sculptured border	Relief	1
La Rabia	2nd C AD	Single carved floral motif	Relief	1
Los Castañares	2nd C AD	Sculptured border	Relief	2
Los Cerverales	2nd C AD	No decoration observed/recorded	Unknown	1
Peñaflor	2nd C AD	Animal (possibly dog)	Engraved	1
Peñaflor	2nd C AD	Architectural moulding of inscribed object	Relief	1
Peñaflor	2nd C AD	Bird (possibly dove?)	Engraved	8
Peñaflor	2nd C AD	Decorative hederæ	Engraved	5
Peñaflor	2nd C AD	Garland	Engraved	3
Peñaflor	2nd C AD	Grapes	Engraved	2

Appendix C

Peñaflor	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	6
Peñaflor	2nd C AD	Incised border	Engraved	1
Peñaflor	2nd C AD	Laurea (wreath)	Engraved	1
Peñaflor	2nd C AD	Leafy boughs, branches and/or vines	Engraved	2
Peñaflor	2nd C AD	Moulded cornice	Relief	1
Peñaflor	2nd C AD	No decoration observed/recorded	Unknown	35
Peñaflor	2nd C AD	No decorative elements utilised	Neither	4
Peñaflor	2nd C AD	Patera	Relief	1
Peñaflor	2nd C AD	Praefericulum	Relief	1
Peñaflor	2nd C AD	Prominent cornice and base	Relief	2
Peñaflor	2nd C AD	Sculptured border	Relief	9
Peñaflor	2nd C AD	Tree	Engraved	1
Peñaflor	2nd C AD	Urceus	Engraved	1
Possibly Sevilla	2nd C AD	Cornice carved with pulvini and focus	Relief	1
Possibly Sevilla	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	2
Possibly Sevilla	2nd C AD	No decoration observed/recorded	Unknown	4
Possibly Sevilla	2nd C AD	Patera	Relief	1
Possibly Sevilla	2nd C AD	Praefericulum	Relief	1
Possibly Sevilla	2nd C AD	Prominent cornice and base	Relief	1
Possibly Sevilla	2nd C AD	Sculptured border	Relief	3
Santiponce	2nd C AD	Border composed of garlands, floral motifs, animal	Relief	1
Santiponce	2nd C AD	Cornice carved with pulvini and focus	Engraved	1
Santiponce	2nd C AD	Cornice carved with pulvini and focus	Relief	1
Santiponce	2nd C AD	Depiction of altar with fruits between 2 serpents	Relief	1

Appendix C

Santiponce	2nd C AD	Figurative scene	Relief	1
Santiponce	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	31
Santiponce	2nd C AD	Incised border	Engraved	1
Santiponce	2nd C AD	Incised border	Relief	1
Santiponce	2nd C AD	No decoration observed/recorded	Neither	3
Santiponce	2nd C AD	No decoration observed/recorded	Unknown	52
Santiponce	2nd C AD	No decorative elements utilised	Neither	17
Santiponce	2nd C AD	No decorative elements utilised	Unknown	1
Santiponce	2nd C AD	Pair of feet (facing downwards)	Engraved	4
Santiponce	2nd C AD	Pair of feet (facing downwards)	Relief	7
Santiponce	2nd C AD	Pair of feet (facing upwards)	Engraved	4
Santiponce	2nd C AD	Pair of feet (facing upwards)	Relief	3
Santiponce	2nd C AD	Patera	Relief	6
Santiponce	2nd C AD	Praefericulum	Relief	1
Santiponce	2nd C AD	Prominent cornice and base	Relief	11
Santiponce	2nd C AD	Puncta resemble small grapes	Engraved	1
Santiponce	2nd C AD	Recessed epigraphic field	Relief	4
Santiponce	2nd C AD	Sculptured border	Relief	12
Santiponce	2nd C AD	Sculptured columns	Relief	1
Santiponce	2nd C AD	Single carved floral motif	Engraved	1
Santiponce	2nd C AD	Urceus	Relief	5
Santiponce	2nd C AD	Virgula/ae utilised as punctum/a	Engraved	2
Sevilla	2nd C AD	3 bands of leaf design borders	Relief	1
Sevilla	2nd C AD	Architectural column with corinthian capital	Relief	1
Sevilla	2nd C AD	Architectural moulding of inscribed object	Relief	1

Appendix C

Sevilla	2nd C AD	Aspergillum	Relief	1
Sevilla	2nd C AD	Border of carved floral & semicircular motifs	Relief	1
Sevilla	2nd C AD	Border of flowers and vine shoots	Relief	1
Sevilla	2nd C AD	Cornice carved with geometric design	Relief	1
Sevilla	2nd C AD	Cornice carved with pulvini and focus	Relief	3
Sevilla	2nd C AD	Cornice carved with pulvini and rosae	Relief	3
Sevilla	2nd C AD	Cornice carved with pulvini, rosae & floral dectn	Relief	1
Sevilla	2nd C AD	Corona	Relief	1
Sevilla	2nd C AD	Decorative hederæ	Engraved	1
Sevilla	2nd C AD	Garland	Relief	1
Sevilla	2nd C AD	Geometric border	Relief	1
Sevilla	2nd C AD	Hedera/ae utilised as punctum/a	Engraved	9
Sevilla	2nd C AD	Laurea (wreath)	Relief	2
Sevilla	2nd C AD	Leaf and floral border	Relief	3
Sevilla	2nd C AD	No decoration observed/recorded	Unknown	8
Sevilla	2nd C AD	Patera	Engraved	1
Sevilla	2nd C AD	Patera	Relief	10
Sevilla	2nd C AD	Praefericulum	Relief	8
Sevilla	2nd C AD	Prominent cornice and base	Relief	11
Sevilla	2nd C AD	Pulvini carved with scales & rosae at end & centre	Relief	1
Sevilla	2nd C AD	Puncta resemble small wavy lines	Engraved	1
Sevilla	2nd C AD	Recessed epigraphic field	Relief	1
Sevilla	2nd C AD	Scapha	Engraved	1
Sevilla	2nd C AD	Sculptured border	Engraved	1
Sevilla	2nd C AD	Sculptured border	Relief	20

Appendix C

Sevilla	2nd C AD	Sculptured border of ova	Relief	2
Sevilla	2nd C AD	Simpulum	Relief	1
Sevilla	2nd C AD	Urceus	Engraved	1
Sevilla	2nd C AD	Urceus	Relief	2
Sevilla	2nd C AD	Virgula/ae utilised as punctum/a	Engraved	1
Torre de Águila	2nd C AD	No decoration observed/recorded	Unknown	11

C.7 IMPERIAL DEDICATIONS

Generalised phase	Modern Site Name	Emperor	No. Surviving Inscriptions
Augustan	Santiponce	Tiberius	1
Augustan & Early Imperial	El Casar	Nero	1
Augustan & Early Imperial	Estepa	Drusus Caesar	1
Flavian & post Flavian	Castillo de Mulva	Titus	1
Flavian & post Flavian	Castillo de Mulva	Trajan	1
Flavian & post Flavian	Castillo de Mulva	Unknown	1
Flavian & post Flavian	Castillo de Mulva	Vespasian	1
Flavian & post Flavian	Santiponce	Trajan	1
2nd C AD	Sevilla	Marcus Aurelius	1
2nd C AD	Sevilla	Septimius Severus	2
2nd C AD	Torre de Águila	Antoninus Pius	1
2nd C AD	Torre de Águila	Hadrian	1
2nd C AD	Torre de Águila	Pertinax	1
2nd C AD	Torre de Águila	Unknown	1
3rd C AD	Santiponce	Carus	1
3rd C AD	Santiponce	Florianus	1
3rd C AD	Santiponce	Probus	1
3rd C AD	Santiponce	Unknown	1
3rd C AD	Sevilla	Constantius I as Caesar	1

C.8 IMPERIAL CULT DEDICATIONS

Generalised phase	Modern Site Name	Deity	No. Surviving Inscriptions
Flavian & post Flavian	Castillo de Mulva	Mercurius Augustus	1
Flavian & post Flavian	Peñaflor	Victoria Augusta	1
Flavian & post Flavian	Santiponce	Apollo Augustus	1
Flavian & post Flavian	Torre de Águila	Fortuna Augusta	1
Flavian & post Flavian	Torre de los Herberos	Mercurius Augustus	1
2nd C AD	Carmona	Nemesis Augusta	2
2nd C AD	Castillo de Mulva	Bonus Eventus Augustus	1
2nd C AD	Castillo de Mulva	Ceres Augusta	1
2nd C AD	Castillo de Mulva	Fortuna Crescens Augusta	1
2nd C AD	Castillo de Mulva	Hercules Augustus	1
2nd C AD	Castillo de Mulva	Pantheus Augustus	1
2nd C AD	Estepa	Salus Augusta	1
2nd C AD	Peñaflor	Venus Augusta	1
2nd C AD	Santiponce	Caelestis Pia Augusta	1
2nd C AD	Santiponce	Liber Pater Augustus	1
2nd C AD	Santiponce	Mercurius Augustus	1
2nd C AD	Sevilla	Vesta Augusta	1
3rd C AD	Santiponce	Victoria Augusta	1

C.9 OCCURRENCES OF GROUP IDENTITIES (DATED AND UNDATED)

Generalised phase	Modern Site Name	Group	No. Surviving Inscriptions
Augustan	Écija	Cohors ?	1
Augustan	Écija	Cohors Praetoria	1
Augustan	Écija	III Cohors Augur	1
Augustan	Écija	Legio II	1
Augustan	Écija	Legio II Pansiana	1

APPENDIX D: DATABASE TECHNICAL DESCRIPTION

D.1 INTRODUCTION

The database uses the Microsoft Access DBMS (DataBase Management System) and is constructed in a relational system with a series of related entities with attributes. These entities and relationships are implemented in Access as a series of tables of which a list follows:

Additional features	Description of features associated with use of object prior to, as an inscription, or secondary use
Architectural Structure	Type of object, orientation of main axis and basic shape
Artistic Elements	Description of decoration, location on monument and relationship with text
Context	Description of findspot
Date	Date assigned, indication of source and whether accepted or published variant, correlation with site phase
Deity	Mention of deities within text of inscription
Description	State of preservation and number of fragments preserved
Dimensions	Dimensions of preserved inscription or fragment
Formulae	Occurrence of formulae in text of inscriptions
Group	Occurrence of mention of group identities in text of inscriptions
Image References	Reference to publication of images of inscriptions
Images	Images of inscriptions
Imperial Titulature	Occurrence of imperial titulature in text of inscriptions
Individuals	Personal details of individuals recorded in the inscriptions
Inscriptions	Unique identifier codes for inscriptions and provenance to modern and ancient site names
Letter characteristics	Specific characteristics of individual letters
Location	Current location of storage, use or display of inscription
Magistracy	Occurrence of magistrates in text of inscriptions
Material	Material of construction including colour and source where known
Notes	General comments about the inscription that do not fit into any other field
Place Name	Occurrence of place names in the text of inscriptions
References	Published references to the inscriptions in previous literature
Relationships	Indications of relationships between inscriptions either due to their use or content of their text
Script	Description of script, occurrence of ordination and form of tabulae
Script Dimensions	Dimensions of script
Script Max/Min	Details of individual letter dimensions when they exceed the norm for the inscription

Subject	Description of subject of inscription and indication of classification
Transcription	Link to Microsoft word document with full transcription of text following standard notation
Translation	Link to Microsoft word document with full translation of text where possible
Variants	Link to Microsoft word documents with full translation of variant texts where alternatives have been published and there is no academic consensus

The structure of the database is too large and complex to reproduce here but is represented in the relationships section of the attached database on the cd which forms Appendix F.

D.2 DATA CONSTRAINTS

A series of methods for controlling and validating the data entry were applied which ensured the quality of the data stored in the system. These included:

- **Look-Up tables:** These enforced the use of standardised terminology within the database. New values were continually incorporated to accommodate the variations in data from all the study sites.
- **Referential Integrity:** This ensured that where relationships existed they were enforced so that data could not be entered in the wrong order and unrelated data could not be accidentally incorporated into the system.
- **Cascade Updates:** This ensured that any critical updates and correction of errors were performed simultaneously to all the related records in the database.
- **Cascade Deletions:** These were not utilised in order to ensure data was not accidentally deleted.

D.3 DATA RELATIONSHIPS

The fields in each table have a series of one to one and one to many relationships dependent upon the nature of the information they contain. For example:

Inscriptions Table: Field List

Name	Type	Size
Inscription Identifier	Text	8
CIL II2 Reference	Text	50
Modern Site Name	Text	50

Date Table: Field List

Name	Type	Size
Date ID	AutoNumber	Long Integer
Inscription Identifier	Text	8
Date	Text	50
Accepted/Variant	Text	50
Date Origin	Text	50
Rationale	Text	50
Site Phase	Text	50

Transcription Table: Field List

Name	Type	Size
Inscription Transcribed	Text	8
Transcribed Text	Hyperlink	

Look Up Site Table: Field List

Name	Type	Size
Site Number	Number	Long Integer
Modern Site Name	Text	50
Ancient Site Name	Text	50
Conventus Division	Text	20
Territory	Text	50
Tribus	Text	50
Category of Site	Text	50
Category of Inscriptions	Text	50
Coordinates: Eastings	Number	Long Integer
Coordinates: Northings	Number	Long Integer

Inscriptions Table: Selected Relationships

Inscriptions		Date
Inscription Identifier	1 ∞	Inscription Identifier
Attributes:	Enforced, Cascade Updates	
Relationship Type:	One To Many	

Inscriptions		Look up Site
Modern Site Name	∞ 1	Modern Site Name
Attributes:	Enforced, Cascade Updates	
Relationship Type:	One To Many	

Inscriptions		Transcription
Inscription Identifier	1 1	Inscription Transcribed

Attributes: Enforced, Cascade Updates

Relationship Type: One To One

D.4 HEIDELBERG STATUS CLASSIFICATIONS

The following conventions for classifying social status were adapted from the *Handbuch zur Epigraphischen Datenbank Heidelberg* pp39-40.

- Ruler: (Augustus, Augusta, Caesar) or Imperial house (domus Augusta)
- Senator
- Eques: whether in government office, within municipium or without office
- Urban élite: Decurion i.e. member of the Ordo Decurionem
- Augustalis
- Apparitor (public servant, clerk etc.)
- Ingenuus (more than only one name with Filiation, except peregrini; secured Roman citizens, except liberti)
- Libertus (recognisable through for example Gens resembling that of marriage partner, denomination of patronus, Greek cognomen, function)
- Servus or Verna (Slave, Slave born in the master's household)
- Libertus Augustalis, Libertus Caesaris (Slave manumitted by Augustus or Caesar)
- Servus/ Verna Augustalis; Servus/ Verna Caesaris
- Libertus publicus
- Servus publicus
- Peregrinus (native individual name + possibly father's name in the genitive; Individual name + native Gens)
- Miles (Indication of duration of military service, military unit)
- Veteranus (Indication of duration of military service over 25 years)

The status of women is defined in a similar way with the appropriate female office substituted e.g. Flaminica for Decurion.
