Egyptology has been dominated by the large quantity of written and pictorial material available. This amazing archaeology has opened up a wonderful view of the ancient Egyptian world. The importance of hieroglyphics and texts, and their interpretation, has led to other areas of archaeology playing much less prominence in the study of Egypt. Perhaps most notable in the relatively infrequent application of analytical science to answer Egyptian questions. This problem has been compounded by difficulties in accessing the material itself. In recent years, however, new research by a range of international groups has overturned this historic pattern, and science is now being routinely incorporated into studies of the history and archaeology of Egypt.

*Science in the Study of Ancient Egypt* demonstrates how to integrate scientific methodologies into Egyptology broadly, and in Egyptian archaeology in particular, in order to maximise the amount of information that might be obtained within a study of ancient Egypt, be it field, museum, or laboratory-based. The authors illustrate the inclusive but varied nature of the scientific archaeology being undertaken, revealing that it all falls under the aegis of Egyptology, and demonstrating its potential for the elucidation of problems within traditional Egyptology.

**Sonia Zakrzewski** is an Associate Professor in Archaeology at the University of Southampton, where she runs a masters course in bioarchaeology and osteoarchaeology, synthesising both human and faunal studies. She publishes widely in bioarchaeology, physical anthropology and science journals and has edited two books.

**Andrew Shortland** is Professor of Archaeological Science at Cranfield University. He is Deputy Director of Cranfield Forensic Institute, where he runs a group that specialises in the application of scientific techniques to archaeological and forensic problems.

**Joanne Rowland** is a Junior Professor in the Ägyptologisches Seminar of the Freie Universität, Berlin. She directs the Minufiyeh Archaeological Survey, and previously was a researcher in the Egyptian Collection at the Royal Museums of Art and History (Brussels) and at the Research Laboratory for Archaeology and History of Art (RLAHA) at Oxford University.

Acknowledgments xvi

1 Introduction: Biographies and Lifecycles 1
1.1 What is Egyptian Archaeology? 1
1.2 Archaeology in Egypt: an Egyptian Archaeology 3
1.3 Archaeological Science and the Study of Egypt: Egyptological Science 4
1.4 Studying Objects, or ‘Material Culture’ 5
1.5 Archaeology in Egypt and How to ‘Read’ This Book 6

2 The Biography of Time and Space 11
2.1 Time: Dating Methods (Relative and Chronometric Dating) 12
  2.1.1 Relative Chronology and Relative Dating 14
  2.1.2 Absolute Dating 25
2.2 Finding Sites and Buildings (with Kristian Strutt) 50
  2.2.1 Remote Sensing and Egyptian Archaeology 50
  2.2.2 Geophysical Survey Techniques 62
  2.2.3 3-D Site Reconstruction 82
  2.2.4 Considerations 82
2.3 The Environment and Palaeoenvironment 82
  2.3.1 Environmental Reconstruction 84
  2.3.2 Obtaining Environmental Data 85
  2.3.3 Animals and Plants 99
2.4 Organisation of Human Burial Grounds 113
  2.4.1 Working with Data from Mortuary Contexts 114
  2.4.2 Types of Data and Organisation 117
3 The Biography of People 125

3.1 Death and Burial 125

3.1.1 Burial Rites and Rituals 126
3.1.2 Patterning of Burials 132
3.1.3 Burials and Tombs 137
3.1.4 Age and Sex 139
3.1.5 Identification of Children and Childhood 143
3.1.6 Kinship 149

3.2 Activity and Occupation 150

3.3 Health and Disease 158

3.3.1 Trauma 160
3.3.2 Infectious Disease 161
3.3.3 Chronic Conditions and Joint Disease 170
3.3.4 Metabolic Conditions 171
3.3.5 Congenital Conditions 173
3.3.6 Tumours 173

3.4 Diet and Subsistence 174

3.4.1 Dental and Skeletal Markers 176
3.4.2 Isotopic Markers 179
3.4.3 Intestinal Contents, Archaeoparasites and Coprolites 180
3.4.4 Other Evidence 186

3.5 Clothing and Adornment 188

3.5.1 Fabric Remains and Wrappings 189
3.5.2 Ornamentation and Amulets 189
3.5.3 Bodily Adornment and Modification 198
3.5.4 Hair 199
3.5.5 Mummified Animals 200
3.5.6 Other Tomb Items and Equipment 202

3.6 Migration and Mobility 202

3.6.1 Isotopic Methods 203
3.6.2 Other Compositional Signals 209
3.6.3 Skeletal Metric Methods 209
3.6.4 Nonmetric Skeletal and Dental Traits 210

3.7 Social Organisation 217

3.7.1 Age and Social Grouping 217
3.7.2 Social Status and Ranking 218
3.7.3 Population and Ethnicity 219
4 The Biography and Analysis of Objects 224
  4.1 Identifying the Material Component: What Is It Made From? 225
    4.1.1 Inorganic Objects – HH-XRF 226
  4.2 Raw Materials 228
    4.2.1 The Provenance Hypothesis 228
  4.3 Distribution and Consumption 229
    4.3.1 Chaîne Opératoire? 231
    4.3.2 Transport and Supply 238
    4.3.3 Production Evidence from Finished Objects 239
  4.4 Egyptian Materials 239
    4.4.1 Stone 239
    4.4.2 Clay and Ceramics 253
    4.4.3 Metals 262
    4.4.4 Glass 275
    4.4.5 Glaze 282
    4.4.6 Pigments 287
  4.5 Use and Re-use of Objects: The Lifecourses of the Objects 292
  4.6 Conservation and Display 293
    4.6.1 Field Conservation 294
    4.6.2 Identifying Early Conservation 295
    4.6.3 Modern Analysis in Collections 296
    4.6.4 Storage and Display 304

5 Ankh, Wedja, Seneb at Tell el-Amarna 305

Appendix I: King List and Summary of Egyptian Chronology 325
Appendix II Summary of Some Major Analytical Techniques and Methods 334

Figures

2.1 King list on the wall of the Temple of Seti I at Abydos
2.2 Bayesian analysis of dates for two short-lived organic samples, demonstrating the effects of prior information
2.3 Quickbird 432-RGB image, pansharpened with high pass edge detection and a 95% clip linear stretch, which reveals part of the plan of the southern Roman Period town at Tell Timai
2.4 Magnetic survey map of Tell el-Balamun
2.5 Topographic survey being undertaken
2.6 ERT transverses demonstrating truncation due to increased spacing
2.7 A SmartCart with 500 MHz antenna in operation at Gurob, being pushed by Rais Omer Farouk el-Quftawi
2.8 Augering alongside Marie Millet’s deep sondage SW of the Sacred Lake at Karnak to enable comparison of augered and excavated material and extend records of sediments below the watertable
2.9 Corona satellite image of the Nile river near Merimde Beni Salama, taken on November 9th 1968
2.10 Proportions of the major terrestrial game animals in the prehistoric Nile Valley
3.1 CT imaging to demonstrate craniotomy
3.2 Carbon and nitrogen average isotopic values for infants from the Kellis 2 cemetery
3.3 (A) Phytoliths, dendritic forms, spiny in shape from human gut contents HK43. (B) Epidermal cells from cereals from human gut contents HK43. (C) Phytoliths, rondel forms from human gut contents HK43. (D) Cereal starch grain from human gut contents HK43 (scale bar 20 µ). (E) Gelatinized starch from human gut contents HK43 (scale bar 20 µ)
3.4 Hand (shown palm up) wrapped in ‘resin’-soaked layers of textile. HK43, Burial 16 191
3.5 (a) 3D virtual reconstruction result, dorsal image; the two pyriform formations are indicated by a square. (b) The leather bag closed by a knot as it appears to the stereomicroscopy observation. (c, d) SEM-EDX results 196
3.6 Multi-dimensional scaling 2D plot of the 36-trait MMD distances among the 14 Nubian samples 214
4.1 Map of the Eastern Mediterranean showing the most probable source areas for the fabric groups on the basis of geology 234
4.2 Composite RTI of the lower part of the so-called Battlefield Palette, lit under normal light or default illumination and using the diffuse gain rendering mode 299
