Future Lab - "Smart Not Dark"

Jeremy G.Frey
School of Chemistry, University of Southampton, UK

16 Feb 2006
Smart Lab
Laboratory Informatics Exchange 2006

The CombeChem Project

- Collect data with regard to how it could eventually be used
  - Make sure the metadata is of high quality
  - Record properly at source in Digital Form
- The Chemistry Lab
  - People & Machines working together
- End to End linking of data and information
  - Publication@Source
- But then.... "Who needs provenance?"
  Bush, Blair The JIC, MI5, CIA & Hutton

Chemical Grids

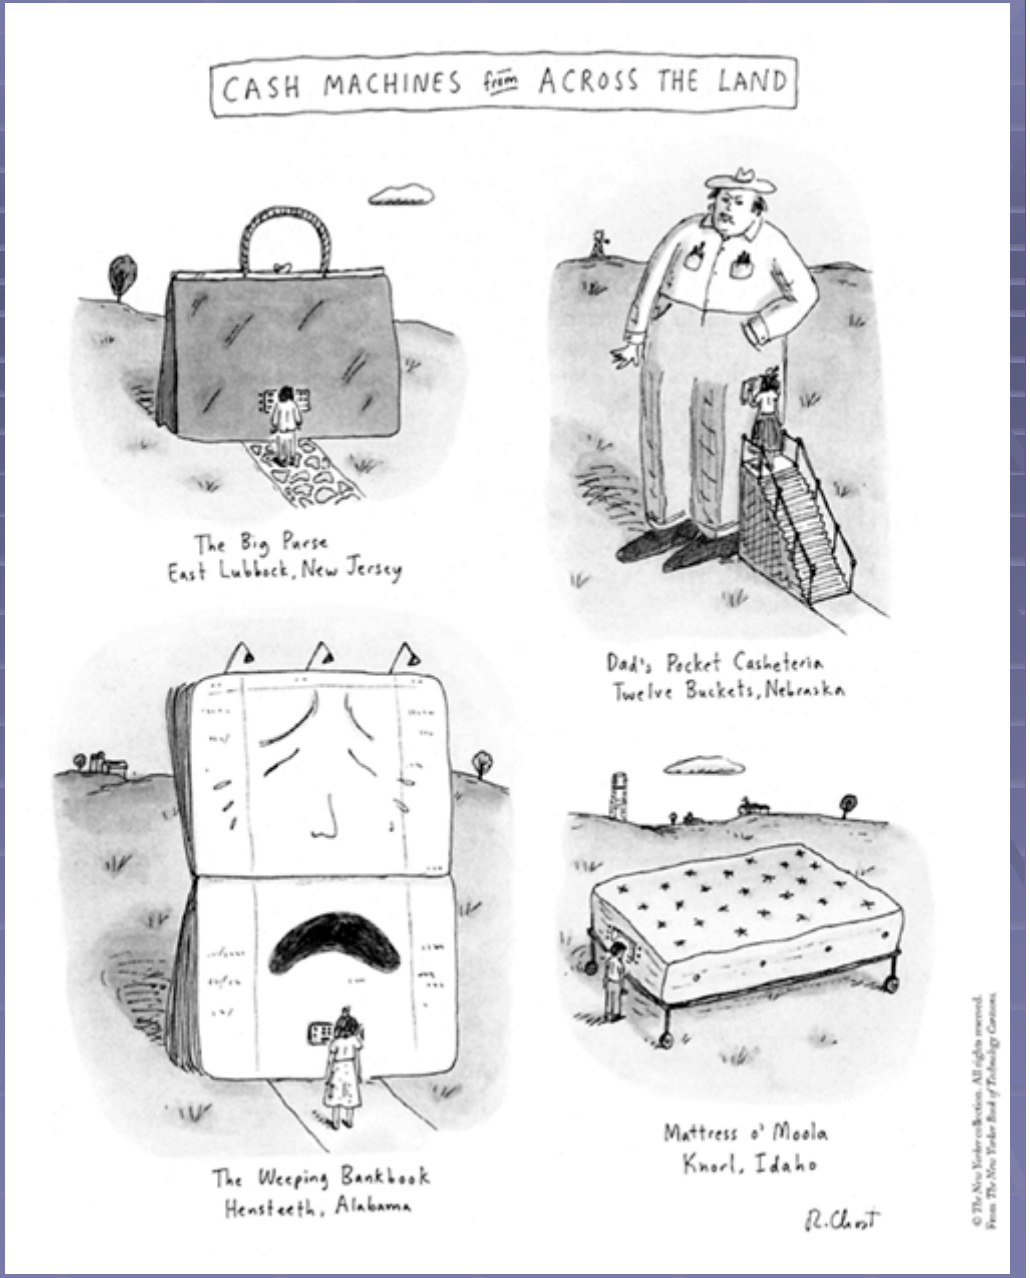
- Start in the laboratory – pervasive physical grid (Smart Tea)
- Computational chemistry very significant source – *in silico* grid (*Chem* MyTea)
- Used by chemists so must be simple to support & maintain - *simple, stable, secure, & autonomic*

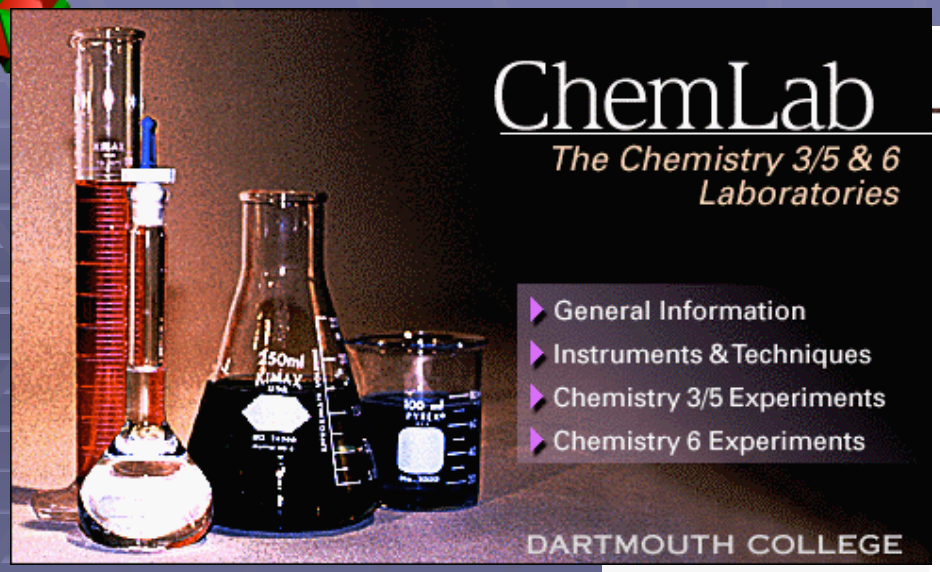
What are the people up to?

We can capture the environment
but need to capture the processes

Who is doing what, where are
they doing it, and what is the
environment like?

Like cash machine electronic notebooks have taken many forms - we want one that adapts to context, simple to use in the lab whilst doing actual bench chemistry but linked to more resources at the desk - the pervasive lab book grid





Permanent, documented and primary record of laboratory ***observations***

16 Feb 2006

How to Keep a Notebook

One of the most useful skills you will acquire in the laboratory is the proper use of a laboratory notebook. Notebooks, or other formally kept records, are an essential tool in many careers, ranging from that of the research scientist to that of the practicing physician. The effort invested in developing good habits of notebook use will be amply repaid for students who pursue a future in the basic or applied sciences. Experience has indicated that skillful notebook use is developed by most students only through continued special effort--it does not come naturally. Some of the main principles of sound notebook use are outlined below.

The laboratory notebook is a permanent, documented, and primary record of laboratory observations. Therefore, your notebook will be a bound journal with pages that should be numbered in advance and never torn out. A notebook will be supplied to you before the first laboratory period. Write your name, the name of your TA, and your lab section on the cover of your notebook. All notebook entries must be in ink and clearly dated. No entry is ever erased or obliterated by pen or "white out". Changes are made by drawing a single line through an entry in such a way that it can still be read and placing the new entry nearby. If it is a primary datum that is changed, a brief explanation of the change should be entered (e.g. "balance drifted" or "reading error"). No explanation is necessary if a calculation or discussion is changed; the section to be deleted is simply removed by drawing a neat "x" through it.

necessary if a calculation or discussion is changed; the section to be deleted is simply removed by drawing a neat "x" through it.

In view of the fact that a notebook is a primary record, data are not copied into it from other sources (such as this manual or a lab partner's notebook, in a joint experiment) without clear acknowledgment of the source. Observations are never collected on note pads, filter paper, or other temporary paper for later transfer into a notebook. If you are caught using the "scrap of paper" technique, your improperly recorded data may be confiscated by your TA or instructor at any time. It is important to develop a standard approach to using a notebook routinely as the primary receptacle of observations.

Each week at the beginning of lab lecture, you will turn in your prelab problems from the manual for grading. [illegible] problems not turned in at the beginning of lab lecture [illegible] be

Observations are never collected on note pads, filter paper or other temporary paper for later transfer into a notebook

COSHH ASSESSMENT FORM Record No.

SUBSTANCE NAME	PHYSICAL FORM	QUANTITY	NATURE OF HAZARD
Water	liquid	1000ml	None
Dextrose	Solid	<20g	possible irritation to eyes and skin
Caffeine	Solid (tea)	<1g	Harmful if swallowed, induce vomiting
Milk	liquid	<100ml	No particular hazards

NATURE OF PROCESS

liquid extraction of caffeine, followed by combination with dext
to produce a sweet drink

Is there a less hazardous substance? No
If so, why not use it?

CONTROL MEASURES REQUIRED No specific measure required
(Local exhaust ventilation, personal protection, etc.)

experiment in more detail.

PDAs everywhere

Members of Dr Frey's non-linear laser spectroscopy research group, working as part of the Combechem project, have been successfully trying out the system at conferences - and in the university bar.

The next step is to evolve the system so that at a push of a button on a mobile, scientists will be able to remotely change the conditions in the lab, like turning down the temperature.

It could also realise the promise of controlling home environments from phones easily and seamlessly.

But there are many other potential applications for the monitoring jobs done by the power industries, healthcare professions and other labs.

IBM won the Royal Academy of Engineering's MacRobert prize which rewards technological and engineering innovation for the program in June last year.

Chemists enjoy a drink at the bar while keeping and eye on the lab

Used by top global banks, the WebSphere MQ family is a decade old.
