Group Formation

Software Engineering: I want all the students to have the opportunity to learn and perform well:

- No minorities
- Groups are to be multicultural
- Groups are to be balanced in terms of expected performance
- No female can be allocated to an all-male group
- No international student with all home-students
- No groups should have participants from the same country (international)
- distribute participants based on previous marks

Constraint-based Group Formation

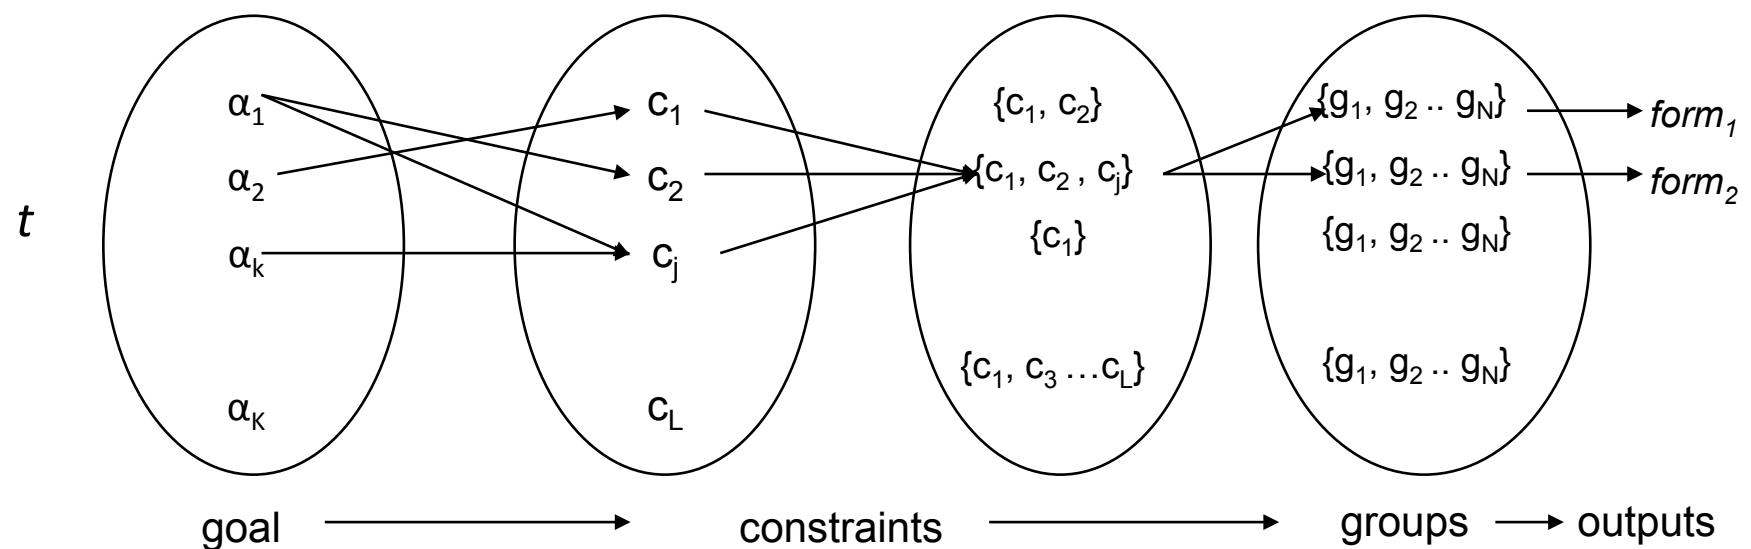

- The allocation of participants to groups based on some constraints
- Collaboration task has a set of goals, each is a set of constraints
- User has a degree of freedom in choosing the constraints
- Each constraint has a value
- Maximize the utility of all constraints within all goals => Optimal formation

Assumptions

- Every student is a member of some group
- Non-overlapping group formation
- All groups have a similar size
- All formed groups are stable while the formation is not announced by the instructor

Metrics for Group Formation

- Collaboration task t
- Collaboration Goals α
- Constraints c
- Participants p
- Groups g
- Cohort G
- Formation $form$
- Productivity $Q(t)$

1. Constraint Satisfaction Quality

- For a constraint c , how well was c satisfied?

How well did all group g satisfy c

$$f_{g,c} = \begin{cases} v & \text{if } c \text{ is satisfied,} \\ 0 & \text{otherwise} \end{cases}$$

- Cohort Constraint Satisfaction Quality

How well did all the groups satisfy c

Optimal Formation

The optimal formation is the optimal cohort that can result from the set of goals, such that the formation quality metrics are maximized.

Optimal Formation

Procedure - Calculating group formation quality

Given task t , optimal formation $form_{opt}$

for each formation $form$

for each group g in the cohort C

for each goal α in the task t

for each constraint c in goal α

calculate *group constraint satisfaction*

calculate *group goal satisfaction*

calculate *group formation quality*

calculate *cohort formation quality*

if cohort formation quality > optimal quality

then $form_{opt} \leftarrow form$

return $form_{opt}$
