

# RKBExplorer.com:

## Anatomy of a Semantic Web Application

DERI

Hugh Glaser & Ian Millard  
16th December 2008

# Context

- CSAKTiveSpace
  - AKT Project
  - First Semantic Web Challenge winner 2003
- ReSIST - EU Network of Excellence in Resilient Systems
  - Knowledge-enabled infrastructure
  - Jan 2006 – Dec 2008

# Communication

- Ontologies
  - General Scientific Endeavour
  - Domain-specific
  - Support (geospatial, etc)
- Open Local Knowledge – HTTP
  - Resolvable URIs
  - SPARQL
- Uses Remote Knowledge
  - Resolves URIs with caching

# Components 1

- Semantic Web infrastructure throughout
- Triplestore for each source
  - Putting the Web in Semantic Web
  - Stores RDF – (Subject, Predicate, Object)
  - We use 3store
- Linked Data
  - 303 and content negotiation architecture with caching

## Components 2

- Co-Reference Subsystem
  - CRS – more later
- Community of Practice Analysis
  - Why do you think that?
- Ontology Mapping
  - Dealing with other Ontologies
- NLP for text classification
- Caching everywhere

## Components 3

- Application Middleware
  - URI Equivalence Closure
  - RDF Graph Closure
- Semantic Sitemap
  - Facilitate Search Engines

# User Interaction

- Semantic MediaWiki
- Custom form interfaces
- Google Maps
- Raw Knowledge Browser
- **RKBExplorer**
- Why do you think that? information

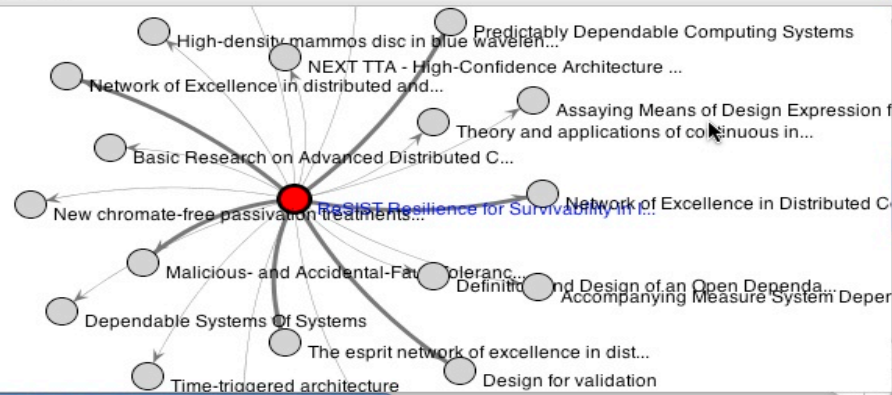

people research areas publications **projects** search

# Focusing on a Person

### Alexander Romanovsky

50 / 60

### Detail

Full Name:  
Alexander Romanovsky

### People

- R de Lemos
- Brian Randell
- Jie Xu
- A Garcia
- R J STROUD
- A F Zorzo
- Cristina Gacek

### Research Areas

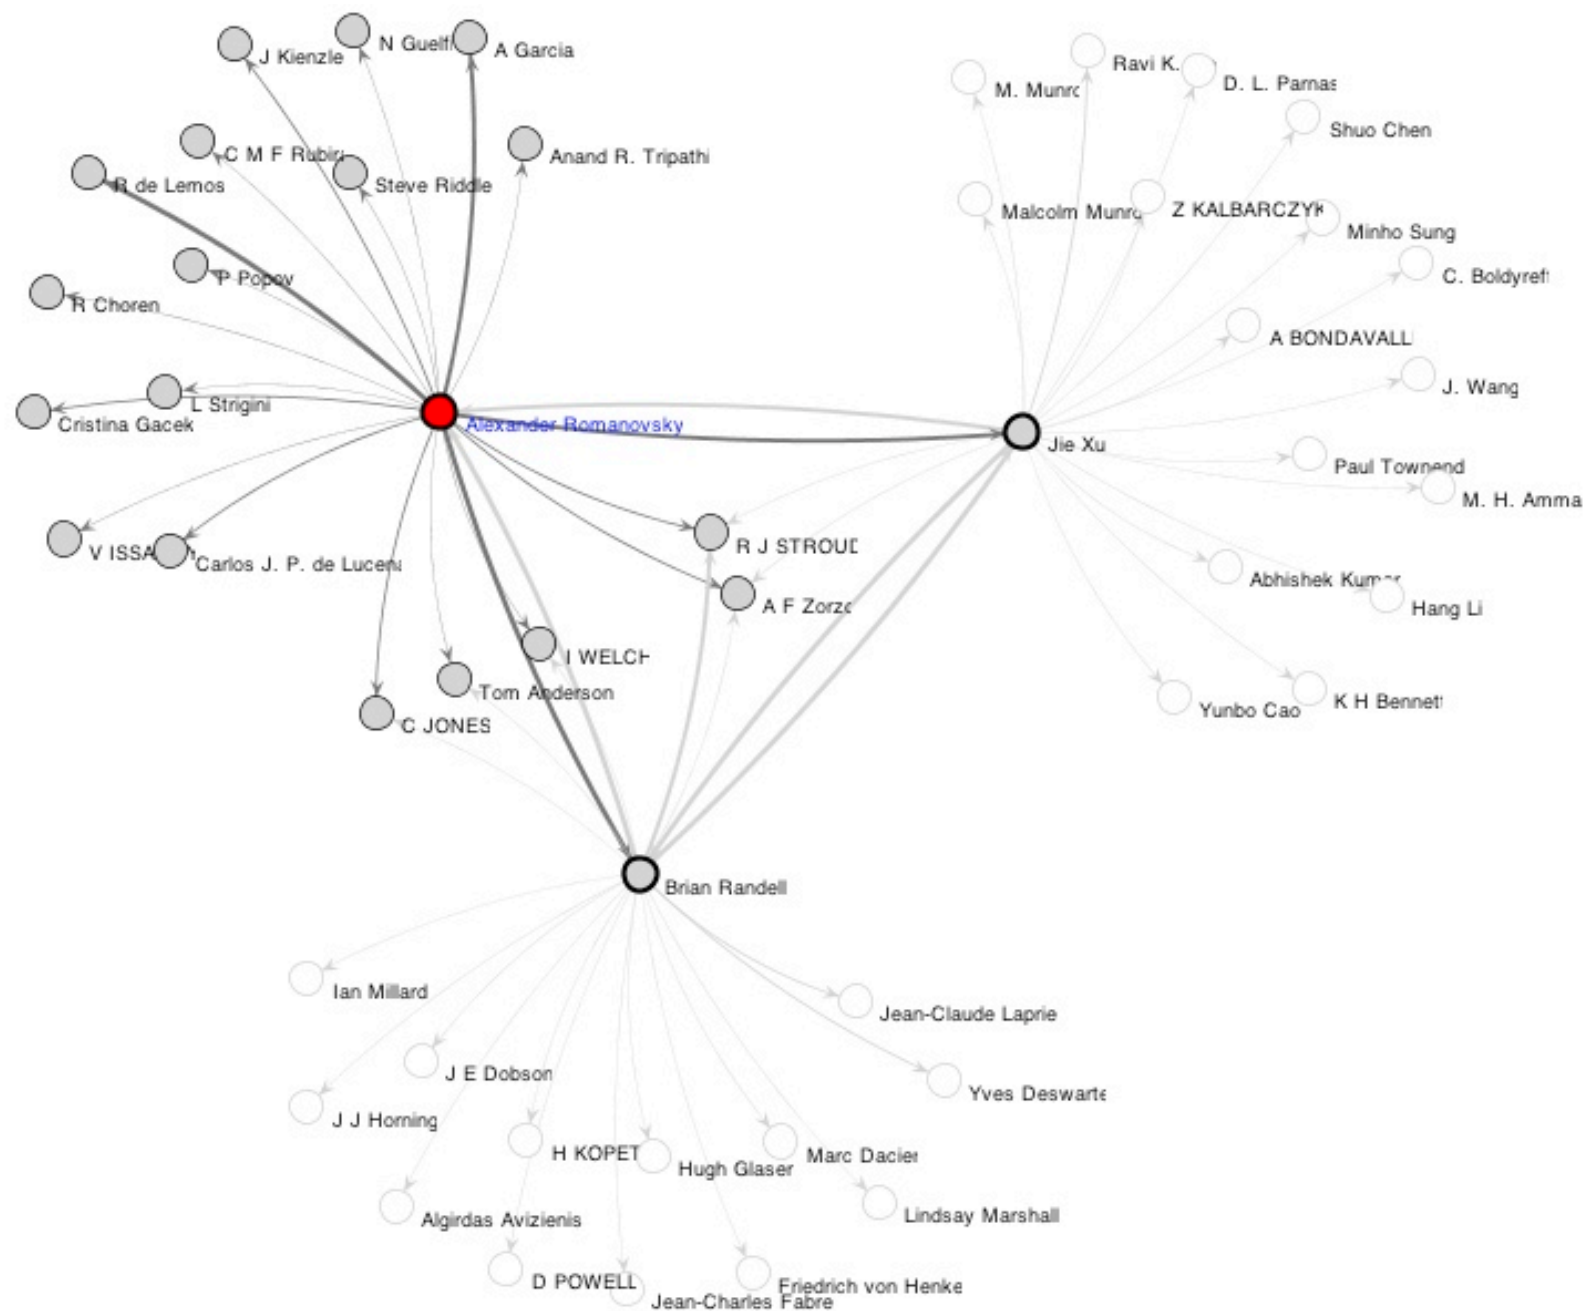

- D.1.5. Object-oriented Programming
- D.2.4. Software/Program Verification
- D.3.2. Language Classifications
- D.4.5. Reliability
- D.2.5. Testing and Debugging
- D.2.11. Software Architectures

### Publications

- DEPLOY: Industrial Deployment of Advanced System Engineering Methods for High Productivity and Dependability
- Refinement Patterns for Fault Tolerant Systems
- Special track on Dependable and Adaptive Distributed Systems: editorial message

### Projects

- Rigorous Open Development Environment for Complex Systems
- DOTS: DIVERSITY WITH OFF-THE-SHELF COMPONENTS
- ReSIST Resilience for Survivability in IST

# Why do you think that?

[Alexander Romanovsky](#) is related to [R de Lemos](#)

They are linked by 33 relations.

## Publications

They have co-authored 32 papers:

- [Coordinated Atomic Actions in Modelling Objects Cooperation](#)
- [Exception Handling in a Cooperative Object-Oriented Approach](#)
- [Integrating COTS Software Components into Dependable Software Architectures](#)

(29 more)

## Affiliations

They are both affiliated to [NEWCASTLE UNIVERSITY](#).

This is a page that gives a simple demonstration showing papers which have been deemed related through textual analysis by IAI Saarbrücken. Up to the top 20 are listed for each paper, when they meet a simple thresholding:

1 – very strong – 0.9 – strongly – 0.7 – related – 0.6 – ignored – 0

The 1980 paper **Exception Handling and Software-Fault Tolerance** [[browse](#)]

is very strongly related to

- [[browse](#)] 2003 "Automatic detection and masking of non-atomic exception handling" [PDF]
- [[browse](#)] 1989 "Formal Verification of Programs with Exceptions"
- [[browse](#)] 1983 "Programming Reliable and Robust Software in ADA"

is strongly related to

- [[browse](#)] 1998 "Improving software robustness with dependability cases" [PDF]
- [[browse](#)] 1999 "Wrapping windows NT software for robustness" [PDF]
- [[browse](#)] 1981 "Exception Handling and Error Recovery Techniques in Modular Systems - An Application to the Isaure System"
- [[browse](#)] 2003 "Deadlock resolution via exceptions for dependable Java applications" [PDF]
- [[browse](#)] 2002 "Robust software - no more excuses" [PDF]

is related to

- [[browse](#)] 1995 "Fault tolerance in concurrent object-oriented software through coordinated error recovery" [PDF]
- [[browse](#)] 2004 "Implementing simple replication protocols using CORBA portable interceptors and Java serialization" [PDF]
- [[browse](#)] 1984 "Fault Tolerance Using Communicating Sequential Processes"
- [[browse](#)] 2001 "Middleware support for voting and data fusion" [PDF]

## ReSIST / Welcome

Welcome to the ReSIST Wiki, which is the internal communication mechanism for the EU funded [ReSIST "Network of Excellence"](#).

Note that virtually all pages are private, and viewable only to ReSIST members who have [logged in](#).

Most content can be found by firstly browsing the main [ReSIST page](#), which details the different research areas in which activities are ongoing as part of the project.

If you have any questions or problems, please check that they have not previously been answered in the [frequently asked questions](#), before contacting [Ian Millard](#) or [Hugh Glaser](#) at Southampton.

### Quick Links

[\[edit\]](#)

- [Frequently asked questions](#)

## ReSIST / Resilience-Explicit Computing Mechanisms

Name of the resilience mechanism (A title to identify your mechanism)	N-Version Programming/1/1
Submitted by (The person(s) identified here shall be the point of contact for any queries relating to data entered into this form about this mechanism)	<a href="#">Zoe Andrews</a>
Author of mechanism (Click on the "add new item" link to search for, and add, authors of this mechanism. These people should have a good understanding of the mechanism and may be the same as those identified in the previous question)	<a href="#">Algirdas Avizienis</a>
Associated projects (Click on the "add new item" link to search for, and add, projects that are associated with this mechanism. Possible associations include projects that: funded research on the mechanism; address similar aims; or use similar techniques)	<None>
Mechanism Objectives (Summary of the purpose of your mechanism in a sentence or two)	To utilise design diversity and voting in order to tolerate software faults
Detailed Description (Either enter a detailed description of the mechanism here, should be detailed enough for the reader to be able to re-create the mechanism, or reference a paper with such text in below)	<p>The information here applies to the specific variant of the mechanism NVP/1/1, described in "Definition and Analysis of Hardware- and Software-Fault Tolerant Architectures". The specific variant considered, NVP/1/1, has three diverse implementations of a software module.</p> <p>For a more general overview of the mechanism please see "The N-Version Approach to Fault-Tolerant Software".</p>
Detailed Description Publication (If applicable (see above), click on the "add	<a href="#">Definition and Analysis of Hardware- and Software-Fault-Tolerant Architectures</a>

## Editing "N-Version Programming/1/1"

### Step 5 of 7: Resilience metadata - how the mechanism helps a system's resilience

(For questions, problems or feedback filling out this form, please [email us](#) )

#### Failure Modes

(Select the ways in which your mechanism can fail to function as intended. To help you to decide what the appropriate failure modes are you could treat your mechanism as a black box and think about the kinds of failures you expect to observe from it. The terms in this list are taken from the ReSIST ontology on security and dependability.)

(CTRL+Click to select multiple values)

Consistent Failures  
Content And Timing Failure  
Content Failure  
Early Timing Failure  
Erratic Failure  
False Alarm

#### Threats Addressed

(Select the threats to resilience that your mechanism aims to address, ie the faults it aims to remove, the errors it aims to compensate for and the failures it aims to prevent. The terms in this list are taken from the ReSIST ontology on security and dependability.)

(CTRL+Click to select multiple values)

Accidental Fault  
Budget Failure  
Catastrophic Error  
Catastrophic Failure  
Commission Fault  
Complete Development Failure

#### Resilience Metadata

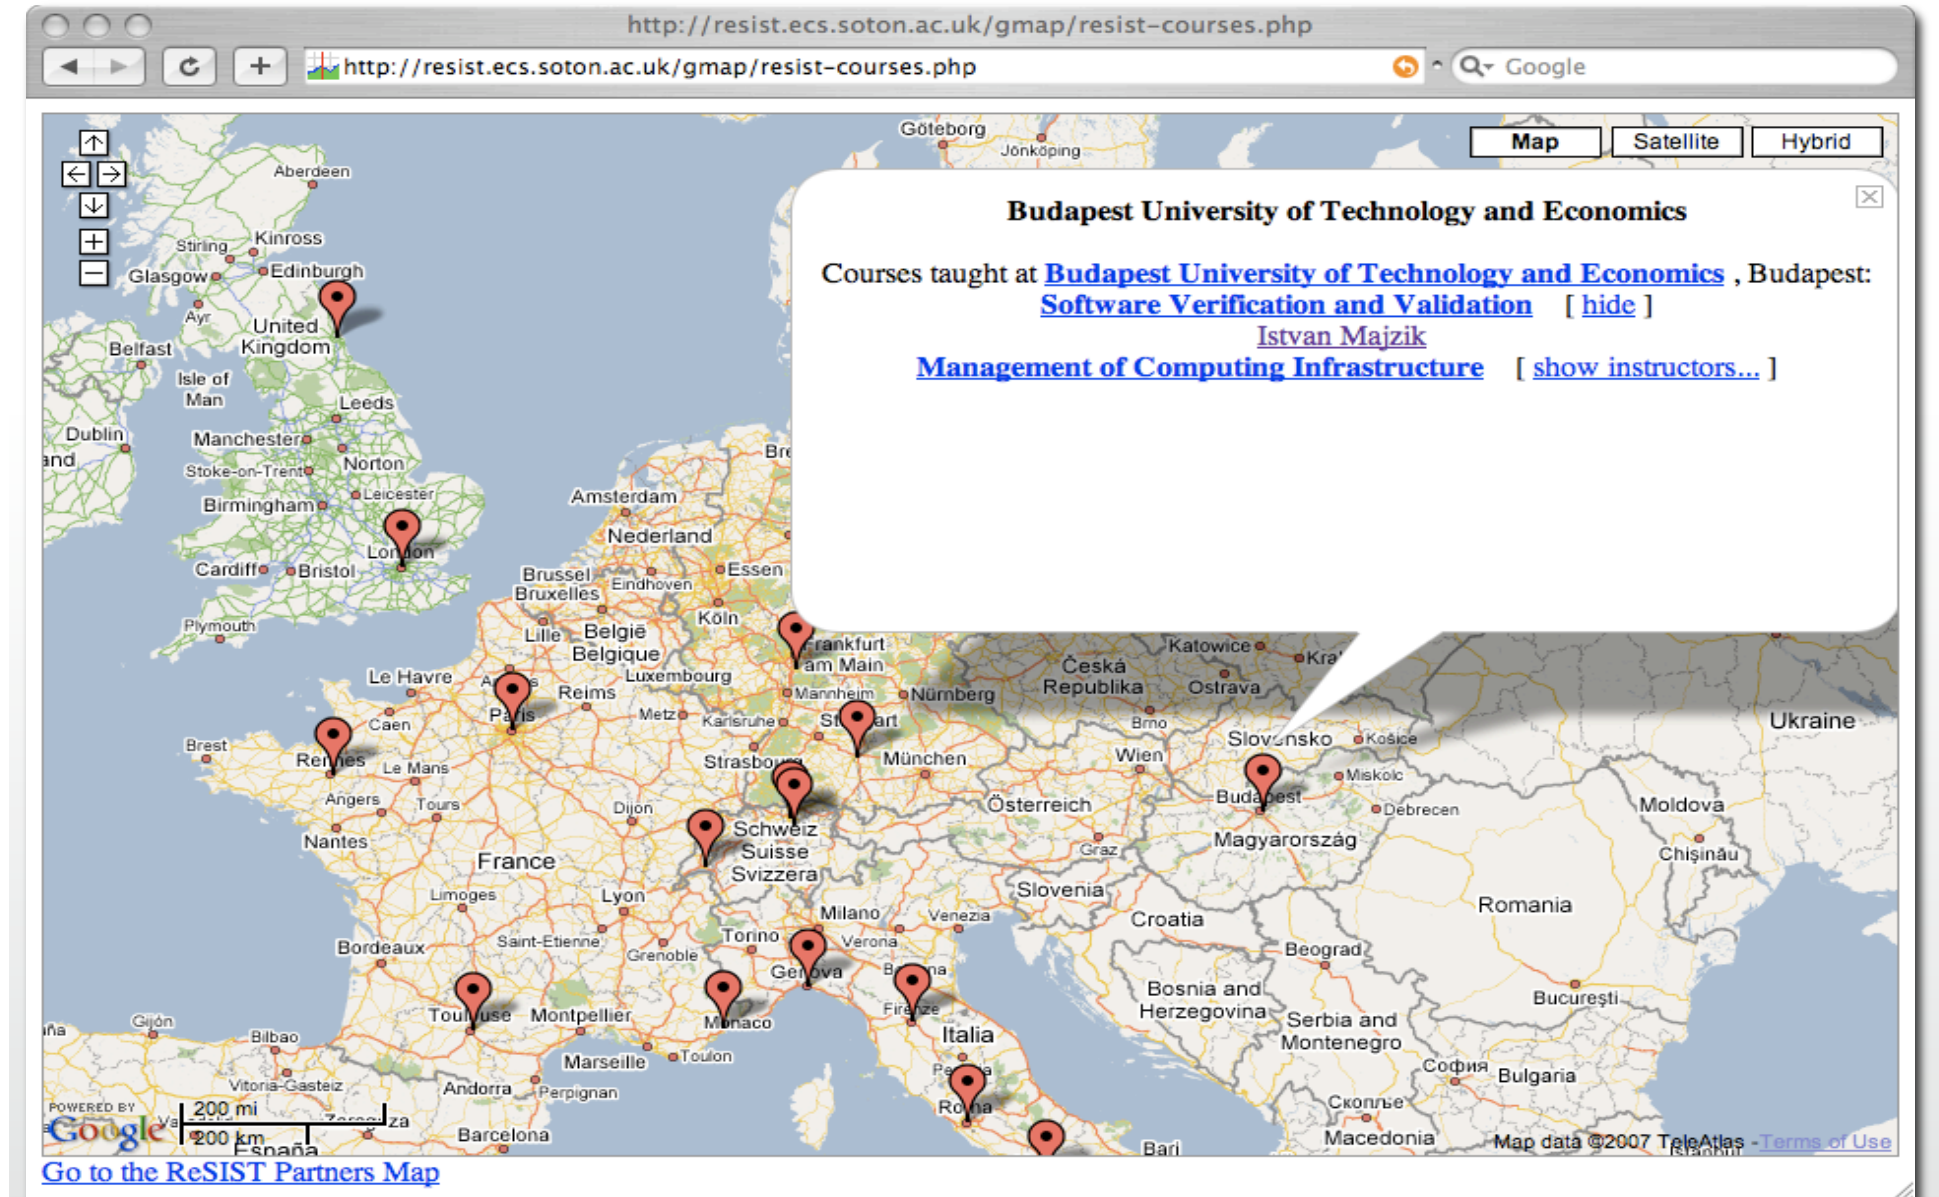

In this question you are asked to think about the effect your mechanism has on the resilience of a system. If you were to compare your mechanism to a different mechanism addressing a similar aim, what data would you use to choose which was fit for a specific purpose? This question allows you to define such metrics and associate a value with them for your mechanism. New resilience metadata metrics and values can be added to this list by clicking on the "add new item" link. Existing metadata instances can be deleted or edited by clicking the cross or the pencil next to them respectively. Note that when you edit some metadata a new version is saved as well as the old one, which can then be deleted.)

Time-dependent probability ( $P(t)$ ) of undetected failure  
POFOD (Undetected) \* application software's execution  
rate \* t Probability  

Time-dependent probability ( $P(t)$ ) of failure POFOD \*  
application software's execution rate \* t Probability  

Time-dependent probability ( $P(t)$ ) of detected failure

Range from a few 100 to more than 10,000,000 “facts”

## For example

- Statistics for repository [kisti.rkbexplorer.com](http://kisti.rkbexplorer.com)
  - Last data assertion 2008-09-18 17:16:41
  - Number of triples 12815162
  - Number of symbols 3239105
  - Size of RDF dataset 671M

# Co-Reference

- Co-Reference is a Big Problem
  - Identifying multiple URIs for one resource
  - Rejecting incorrectly conflated resources
  - Publishing
  - Using
- Coldstart
  - A serious problem
  - Nothing is linked to anything

# Co-Reference Closure

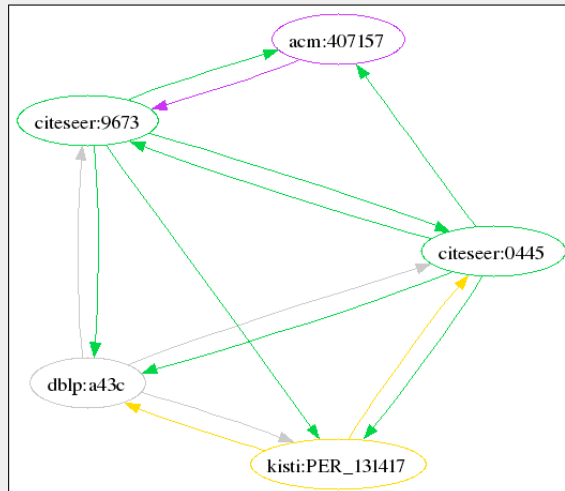

## Complete Co-Reference Information

This service computes the equivalence class within the known URIs for a specified URI, by consulting all relevant CRS knowledge bases.

### Equivalent URIs...

1. **(Canon)** <http://acm.rkbexplorer.com/id/person-407157>
2. <http://citeseer.rkbexplorer.com/id/resource-CSP179673>
3. <http://citeseer.rkbexplorer.com/id/resource-CSP180445>
4. <http://dblp.rkbexplorer.com/id/people-1ec5a600299222dd6374695ef5214f05-90d423eb148125a6e5c573dc5a15a43c>
5. [http://kisti.rkbexplorer.com/id/PER\\_0000000000000131417](http://kisti.rkbexplorer.com/id/PER_0000000000000131417)

The following diagram shows the interconnectivity between the CRS knowledge bases which maintain the context-dependent representation of coreference for each of the RKBExplorer domains.

# CRS – Consistent Reference Service

- A service to manage and publish co-referent information
- Identify co-referent pairs using a set of tools
- Assert into the CRS
- Query the CRS
  - $URI_i \rightarrow \{ URI_1, \dots, URI_i, \dots, URI_n \}$
- Recommend a Canon

## CRS continued

- CRS Policies are defined by context
  - Often one per Triplestore
  - Can be many per Triplestore for different purposes
  - May not be associated with a particular Triplestore
- Maintenance
  - Provenance
  - Rollback
- Can be used to infer owl:sameAs

# Dealing With Non-SPARQL KBs

- The RKBExplorer application uses SPARQL to query the KBs
  - But needs to access data from KBs that only offer resolvable URIs
- So resolve such a URI
- Cache the RDF with associated resolved RDF locally
- Query the local cache

# Dealing With Different Ontologies

- The RKBExplorer application uses a particular ontology
  - Some KBs will use different ontologies
  - Eg [kisti.rkbexplorer.com](http://kisti.rkbexplorer.com)
- One solution
  - Represent the ontology relationship in RDF (as far as possible)
  - Resolve the URI through the mapping service to get RDF in the required ontology

# Supporting resilience

- People, Publication, Projects, Research Areas
- Resilience-related topics
- Resilience-Explicit Computing
- Educational Resources
- In the future
  - Automating discovery of issues and solutions
    - Design time
    - Run time

# Finding mechanisms that are appropriate for Hardware and Aerospace

# Concluding Remarks

- Major Data Fusion using Semantic Web Technologies
- Many things can be cast in a Semantic Web framework
- Linked Data works pretty well
- RDF works pretty well
- A little Ontology goes a long way
- Co-Reference is the biggest problem
  - But is tractable

# RKBExplorer.com/explorer/ – Try it!

The screenshot displays the RKBExplorer.com website interface. At the top, there's a navigation bar with links: people, research areas, publications, projects, and search. Below this, a large network diagram titled "Resilience for Survivability in IST" is shown. The diagram features a central red node connected to various other nodes, each representing a research project or publication. To the right of the diagram is a "Detail" panel for the selected project, "Resilience for Survivability in IST". This panel includes fields for Title, Other Names, Funding (4500000), Project Leader (Jean-Claude Laprie), and Leading Organisation (Centre National de la recherche Scientifique). Below the main content area, there are four panels: "People" (listing Jean-Claude Laprie, Aad van Moorsel, Abdelmajid Khelil, Achour Mostefaou, Adnan Noon Mian, Afraz Jaffri, Agnan de Bonneval, and Alberto Pasquini), "Research Areas" (listing Information processing, information systems, Development Failure, Dependability And Security Analysis, and Dependability And Security Provision), "Publications" (listing Revised version in Predictably dependable computing systems, ASSERT Automated proof based system and software engineering for real-time applications, and Guide de la sûreté de fonctionnement), and "Projects" (listing Malicious- and Accidental-Fault Tolerance for Internet Applications, The esprit network of excellence in distributed computing systems architectures, Design for validation, and Network of Excellence in). At the bottom of the page, there's a footer with links: about | news | system requirements | acknowledgements | contact.
