deGendering Games: Towards the Development of a Gender-Inclusivity Framework (GIF)

Gender-inclusivity in games may support certain features and in turn may even determine the features of applications built based on it. This poses a challenge: although we have good techniques for analyzing, designing and evaluating current games, our techniques for gender-inclusive games are much less formed.

A framework was proposed to provide a theoretical context and scope about gender-inclusivity in games. The framework defines gender-inclusivity in three components: (1) gameplay, describes the game behaviour, (2) context, describes the aesthetics content and; (3) genre, indicates the type of game.

The Gender-Inclusivity Framework (GIF) contains description of gender-inclusivity components and sub-components with its corresponding behaviour.

Gender issues in games are concerned with:

- how different gender competes and their style of conflict resolution [2], [4],[9],[10].
- how each gender responds to stimulation [10];
- how each gender views rewards in games [5],[10];
- which genre and game content each gender prefers [6],[12],[13],[14],[15];
- what kind of play environment each gender prefers [1],[7],[10];
- and what kind of design features each gender prefers [3],[8],[10].

It reveals a number of distinct differences between a female and male player in terms of gameplay styles, genre choice, preferences in game content, play environment and design preferences.

When creating a game, designers add features to their design with the intention to enable certain gameplay experiences. However, there is a degree of separation between the desired gender-inclusive experience in games and the mapping of that experience.

Currently, the determination of gender-inclusive features in games is not particularly documented and is largely based on a designer’s experience and intuition. These were progressively developed based on prior designs.

Consequently, how can we tell if the gender-inclusive gameplay experience is really compelling or even ‘right’? There is little reported experience in the issues that arise in determining what features should go into a gender-inclusive game and for determining the success or failure in the evaluation of those features.

The results of previous research were relevant and yet somewhat inconclusive. Most focused on identifying gender preferences and did not sufficiently include the application of gender-inclusivity nor does it provide guidance about how to design games with some level of gender-inclusivity.

The questions that arise from this situation include:

- How to define gender-inclusivity in games?
- How to incorporate gender-inclusivity into a game design process?
- How to accurately measure gender-inclusivity in games?

The Gender-Inclusivity Framework (GIF) aims to:

- Help define gender-inclusivity in games.
- Guide the inclusive game design process.
- Measure the level of gender-inclusiveness in games.

Potential Use

Serves as a reference point.
Serves as a boundary.
Serves as a filtering tool.
Serves as a design guidelines.
Serves as a measuring tool.
