

LBP-TBQ: Supplementary digital content 4

Subscale correlations for all 4 treatments:

Subscale scores were computed for the Credibility, Effectiveness, Concerns and Fit constructs in the 16-item LBP-TBQ, for each treatment. Correlations (Pearson's r) between these scales are presented below per treatment, for each data collection wave.

	Credibility				Effectiveness				Concerns				Fit			
	Me d	Exe	MT	Acu	Me d	Exe	MT	Acu	Me d	Exe	MT	Acu	Me d	Exe	MT	Acu
Credibility					.66 **	.85 **	.84 **	.88 **	.47 **	.66 **	.72 **	.71 **	.71 **	.80 **	.73 **	.78 **
Effectiveness	.68 **	.84 **	.87 **	.81 **					.46 **	.59 **	.59 **	.60	.67 **	.76 **	.68 **	.74 **
Concerns	.56 **	.69 **	.73 **	.65 **	.44 **	.64 **	.68 **	.67 **					.53 **	.71 **	.80 **	.65 **
Fit	.73 **	.78 **	.75 **	.72 **	.70* *	.72 **	.73 **	.70 **	.63 **	.74 **	.81 **	.63 **				

Note: Shaded areas represent subscale correlations (Pearson's r) in wave 1. The non-shaded areas represent results in wave 2.
