Corrigendum

A method for predicting the consolidated undrained bearing capacity of shallow foundations

S. M. GOURVENEC, C. VULPE and T. G. MURTHY

Table 2: the constant m should be negative, i.e. -0.95 and -1.05 for strip and circular footings respectively (not 0.95 and 1.05 as shown).

Equation 16 should read "$v_{u,cons} = [U (v_{u,cons\_max} - v_u)] + v_u$" (not $v_{u,cons} = U\, v_{u,cons\_max}$ as shown).

The vertical axis labels for Figures 15a and b should read "$G = (v_{u,cons}-v_u)/(v_{u,cons\_max}-v_u)$" (not $G = v_{u,cons}/v_{u,cons\_max}$ as shown).

The authors apologise to the readers of Géotechnique for these mistakes in the original paper.
