

## C11 Keith Jones & Kate Mackrell

*Thinking in 3D with dynamic visualisation software*

KS2,KS3,KS4,KS5,T,A

Thinking in 3D involves not only mental images related to external representations, but also various visualisation processes and abilities. In this workshop we explore the ways in which thinking in 3D might be supported through using 3D software applications such as Cabri 3D and small software applications developed in the DALEST project. **Delegates should bring their own laptops.** Demo Cabri 3D and dynamic visualisation software will be provided.
