NAFLD (& features of MetS)

Liver complications
- Liver fibrosis / NASH
  - Liver cirrhosis
    - HCC
      - Consider 6 monthly US for HCC surveillance if cirrhosis
      - Consider trial drugs: e.g. obeticholic acid, Lanifibranor

Diagnosis T2DM
- Consider metformin
- Consider other agents:
  - Pioglitazone
  - GLP agonists
  - SGLT2-i
  - Obeticholic acid
  - Lanifibranor

Increased CVD risk
- Consider statin therapy
- Treat hypertension (if present)
- High resolution CT scanning for CACS
  - CACS 0 or low
  - CACS high
- Consider low-dose aspirin & ACE-inhibitors or angiotensin receptor blockers & referral to Cardiology specialist

Liver complications
- Reduced NASH
- Reduce fibrosis
- Reduce CVD risk
  - Adverse effect on lipid profile?
  - Beneficial effect on lipid profile?
