ABSTRACT

Optimal timing for neonatal stoma closure remains unclear. In this study we aimed to establish current practice and illustrate multidisciplinary perspectives on timing of stoma closure using an online survey sent to all 27 UK neonatal surgical units, as part of a research programme to determine feasibility of a clinical trial comparing ‘early’ and ‘late’ stoma closure. 166 responses from all 27 units demonstrated concordance of opinion in target time for closure (6 weeks most commonly stated across scenarios), although there was high variability in practice. A sizeable proportion (41%) of respondents use weight, rather than time, to determine when to close a neonatal stoma. Thematic analysis of free-text responses identified 9 key themes influencing decision making; most related to nutrition, growth and stoma complications. These data provide an overview of current practice that is critical to informing an acceptable trial design.

Word count: 142
INTRODUCTION

Neonates undergoing emergency abdominal surgery frequently require stoma formation. Reversing (closing) stomas with a second operation is an essential part of the infant’s recovery, but evidence to inform the optimum timing of stoma closure is limited and conflicting [1-4]. The Timing of Stoma Closure in Neonates (ToSCiN) study will use mixed methods to determine the feasibility of a clinical trial comparing ‘early’ and ‘late’ stoma closure in neonates. In this part, we undertook a survey of neonatal surgical professionals in the United Kingdom (UK), to establish current practice for stoma closure in neonates and explore their perspectives to inform future trial design.

METHODS

An online survey was developed which focused on three domains (Appendix 1):

1. The clinical role of the respondent and structure of their neonatal surgical institution
2. Current practice for timing of stoma closure and clinical considerations for expediting or delaying surgery
3. Focused questions on preferred practice across four clinical scenarios: preterm and term infants with congenital or acquired gut pathologies

The survey was distributed using LimeSurvey© to consultant neonatologists, consultant paediatric surgeons, neonatal dieticians and specialist neonatal surgical nurses in all 27 UK units caring for surgical neonates. We also disseminated the survey via national organisations (British Association of Paediatric Surgeons and British Association of Perinatal Medicine) and personal contacts of the study team. Our target response was ≥2 surgeons and ≥2 neonatologists from each centre, whilst ensuring sampling variance (e.g. geographical area and healthcare professional type). Finally, we used snowball sampling whereby invitees where encouraged to cascade the survey to help maximise responses. Reminder emails were sent to potential participants to encourage completion and the survey was open for 3 months.

Survey data were described using counts and percentages for categorical variables and median [interquartile range] or mode for continuous variables. Qualitative free-text responses were indexed and analysed thematically [5].

RESULTS

A total of 166 professionals across all 27 UK neonatal surgical centres completed the survey, with 87 (52%) responses from surgeons, 66 (40%) neonatologists, 8 (5%) specialist nurses and 5 (3%) dieticians. All UK neonatal surgical centres responded: ≥2 surgeons responded from 24/27 centres and ≥2 neonatologists from 24/27.
Without defining ‘early’ or ‘later’, 78/166 (47%) respondents generally considered themselves proponents of ‘early’ stoma closure, 47/166 (28%) proponents of ‘later’ stoma closure and 41/166 (25%) unsure.

**Achieving a pre-defined time interval prior to stoma closure**

Attitudes towards timing of stoma closure were sought for each of four clinical scenarios (table 1). The target time to closure was most commonly 6 weeks, although there was variability between scenarios; more respondents favoured a longer time interval between stoma formation and closure for premature infants. Common free-text explanations for a longer interval suggested that greater morbidity and instability would be expected in premature or very-low-birth-weight infants. Inflammatory pathologies (i.e. bowel perforation, peritonitis and necrotising enterocolitis) were often considered to be justifications to extend the interval between procedures to allow evolution of gut sequelae and abdominal quiescence, along with resolution of the catabolic phase of recovery (table 2). While 70-76% of respondents preferred stoma closure prior to discharge in preterm infants and a term infant with a jejunostomy, only 46% would prefer this approach in the term infant with an ileostomy. In all scenarios, a sizeable proportion (29-37%) of respondents indicated they were unsure when would be best to close the stoma.

</tr>
<tr>
<td></td>
<td>Peristomal issues (e.g. skin breakdown, prolapse, granulation) [26]</td>
<td>“Usually, with high-output stomas, early closure is required to avoid growth failure. However, a stably growing infant with successful pro-cycling of stoma outputs can have delayed closure.” [Respondent 11, Neonatologist]</td>
<td></td>
</tr>
<tr>
<td><strong>Factors supporting delaying planned stoma closure</strong></td>
<td>Thriving with stoma and enterally autonomous (including successful recycling) [109]</td>
<td>“I am not sure if the timing of stoma closure is my main concern as a neonatologist. My main concern is time to full feeds, and growth rate. Stoma closure is secondary, and I am happy to consider discharge home with a stoma. In fact, I would prefer to discharge this baby home with a stoma than prolong hospital stay to achieve closure before discharge home.” [Respondent 165, Neonatologist]</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Comorbidities (not optimised for surgery and/or anaesthetic) [56]</td>
<td>“This baby is more likely to have co-morbidities which will influence surgical and anaesthetic risk, especially CLD [chronic lung disease]...Some of these babies get closed many months post-discharge if they are complicated”. [Respondent 28, Neonatologist]</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Underlying gut pathology/surgical technical concerns [35]</td>
<td>“Ideally, I would wait for 6 weeks after NEC [necrotising enterocolitis], to allow for maturation and identification of post-NEC strictures, which may have bearing on success of closure ...I would move to close sooner if MDT [multidisciplinary team] discussion agreed best for baby; again, other comorbidities have a bearing on timing of closure.” [Respondent 34, Paediatric Surgeon]</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Difficulty accessing theatre lists (including Covid-19 limitations) [14]</td>
<td>“One of our main confounding issues at the present time is timely access to theatre lists. Our capacity was diminished pre COVID and worse now. The 1 year wait for stoma closure was certainly not through choice but reflects this problem.” [Respondent 144, Paediatric Surgeon]</td>
<td></td>
</tr>
</tbody>
</table>
Reasons for delaying stoma closure

40% (60/150) of respondents reported they would delay stoma closure due to ‘Invasive ventilation (clinically stable and low/moderate support)’, 29% (44/150) due to ‘non-invasive respiratory support (clinically stable, BIPAP, CPAP, high flow oxygen)’, and 58% (80/138) due to ‘Steroids within the last week’.

Achieving a defined weight threshold prior to stoma closure

Weight was a recurrent theme in both free-text responses and closed questions on preferred timing of stoma closure. Just under half (54/132, 41%) of respondents would delay stoma closure until an infant had reached a pre-defined weight, although the weight threshold varied: median [IQR] 2000g [1625 - 2500g]; mode 2500g.

Reasons for expediting stoma closure

The large majority of respondents indicated they would bring stoma closure forward if there were problems with an infant’s growth, nutrition and stoma. 96% (158/164) reported they would expedite closure due to ‘Concern about poor growth due to stoma’, 97% (157/162) due to ‘Parenteral nutrition (PN) issues (e.g. liver disease or recurrent line sepsis)’, 93% (152/163) due to ‘Inability to advance enteral feeds due to stoma outputs’, and 95% (154/162) due to ‘Difficulties with managing the stoma (e.g. leaking bags, prolapse).’

Recycling of stoma effluent was a variable practice amongst respondents: ‘Routine’ = 41/164 (25%), ‘Sometimes’ = 68/164 (41%), ‘Rarely’ = 42/164 (26%), and ‘Never’ = 13/164 (8%). 52% (73/140) reported they would expedite stoma closure due to ‘Inability to recycle stoma effluent distally.’

Qualitative analysis of free-text responses

For each clinical scenario respondents were asked for further comments and considerations on timing of stoma closure. Through thematic analysis of 355 free text responses, 9 key themes were identified as factors influencing decision making. Those supporting expediting stoma closure included: growth failure and PN dependence, high output stoma, peristomal problems and vascular access. Factors supporting delaying stoma closure included: thriving with stoma, comorbidities (not optimised for surgery), underlying gut pathology/surgical technical concerns and difficulty accessing theatre lists (table 2).

DISCUSSION

This large study of practice and practitioner views illustrates the sometimes conflicting clinical variables that impact timing of stoma closure. Whilst there appears to be some concordance of opinion about an initial target time for closure (6 week interval most common for all scenarios), there remains a high degree of variability, with intervals of 12 weeks or more frequently advocated. This study also demonstrates that a sizeable proportion (41%) of respondents use weight, rather than time, to determine when to close a
neonatal stoma. Furthermore, 1 in 3 respondents expressed uncertainty about timing of stoma closure, perhaps highlighting the lack of a clear evidence-base in this area but also the difficulty in committing to a time when faced with sometimes conflicting and changing clinical parameters in an already heterogeneous population.

Whilst often lifesaving, neonatal stomas can lead to significant challenges, with morbidity from fluid and electrolyte imbalances, peristomal complications, consequences of PN, and the need for central vascular access [1-2]. Our survey reflects these concerns and highlights 9 key factors that affect timing of closure, with the majority relating to nutrition and growth. Perhaps unsurprisingly we found that a respondent’s clinical role altered their responses (e.g. surgeons more often quoted technical factors and neonatologists medical factors as reasons for delaying or expediting surgery). However, the above-mentioned key factors were common to responses from all professions.

A key strength of our survey is its wide coverage with multidisciplinary responses from all UK neonatal surgical units. As with most surveys of practice, a limitation is that respondents reported what they believe their practice to be, rather than providing data on actual clinical cases. We attempted to mitigate against this through provision of real-world clinical scenarios and will capture observational data about practice in future work within the ToSCiN study.

A clinical trial comparing ‘early’ vs. ‘late’ stoma closure would provide high-quality evidence on which to base decision-making. This work provides an overview of current practice that will be critical to informing acceptable trial design.

Future work will further determine trial feasibility based around real-world cases using quantitative and qualitative methods. This will include assessing eligibility in a group of infants with a range of clinical characteristics (and how this may change over time) and whether a trial of early vs. late closure would be acceptable to parents and clinicians caring for these infants.

ACKNOWLEDGMENTS

We would like to thank respondents for completing the survey.

COMPETING INTERESTS

The authors have no competing interests.

FUNDING

This study/project is funded by the National Institute for Health Research (NIHR) Health Technology Assessment (HTA) Programme (project reference NIHR 128617). Further details, including the study protocol
can be found at https://www.npeu.ox.ac.uk/toscin. Marian Knight is an NIHR Senior Investigator. The views expressed are those of the author(s) and not necessarily those of the NIHR or the Department of Health and Social Care.

REFERENCES

Timing of Stoma Closure in Neonates (ToSCiN)

ToSCiN aims to answer the question, ‘is it feasible to conduct a clinical trial comparing ‘early’ vs ‘late’ stoma closure in neonates?’

This survey aims to determine the viewpoints of UK clinicians and allied health professionals who regularly care for infants with stomas.

We would be very grateful if you could complete the survey: we will provide feedback of the results at the end of the ToSCiN study.

There are 50 questions in this survey.

### Background Information

#### Your role *

Please choose **only one** of the following:

- [ ] Consultant Paediatric Surgeon
- [ ] Consultant Neonatologist/Paediatrician (regularly cares for infants with stomas)
- [ ] Neonatal Surgical Specialist Nurse
- [ ] Dietician
- [ ] Other
Description of the type of unit you work in: *

Only answer this question if the following conditions are met:
Answer was ‘Dietician’ or ‘Neonatal Surgical Specialist Nurse’ or ‘Consultant Neonatologist/Paediatrician (regularly cares for infants with stomas)’ or ‘Consultant Paediatric Surgeon’ at question ‘1 [A01]’ (Your role)

Please choose only one of the following:

- Surgical centre with co-located Neonatal Intensive Care Unit
- Neonatal Intensive Care Unit with partner Neonatal Surgical Centre at separate site*
- Neonatal Surgical Centre with partner Neonatal Intensive Care at separate site*
- Other

* ‘Separate site’ defined as a requirement for external transfer of an infant from NICU to operating theatre for surgery

Thank you for your interest but this survey is specifically seeking the viewpoints of those with the above roles

Only answer this question if the following conditions are met:
Answer was ‘Other’ at question ‘1 [A01]’ (Your role)

Thank you for your interest but this survey is specifically seeking the viewpoints of those working in the above types of units

Only answer this question if the following conditions are met:
Answer was ‘Other’ at question ‘2 [A02]’ (Description of the type of unit you work in:)

Introduction
Accepting there is no consensus/definition for ‘early’ or ‘late’, would you consider yourself a proponent of ‘early’ or ‘later’ stoma closure in infants who have had a stoma formed in the neonatal period? *

Only answer this question if the following conditions are met:
Answer was NOT ‘Other’ at question ‘1 [A01]’ (Your role) and Answer was NOT ‘Other’ at question ‘2 [A02]’ (Description of the type of unit you work in:)

Please choose only one of the following:

- Early
- Later
- Unsure

Does your unit recycle stoma output through the mucous fistula?

Only answer this question if the following conditions are met:
Answer was NOT ‘Other’ at question ‘1 [A01]’ (Your role) and Answer was NOT ‘Other’ at question ‘2 [A02]’ (Description of the type of unit you work in:)

Please choose only one of the following:

- Routine
- Sometimes
- Rarely
- Never

Scenarios

We will now describe 2 preterm and 2 term infant scenarios. Please indicate, in terms of your current practice, how you feel it would be best to manage each case.

Only answer this question if the following conditions are met:
Answer was NOT ‘Other’ at question ‘1 [A01]’ (Your role) and Answer was NOT ‘Other’ at question ‘2 [A02]’ (Description of the type of unit you work in:)

Any further comments:

Only answer this question if the following conditions are met:
((A01.NAOK (/index.php/admin/questions/sa/view/surveyid/675993/gid/7/qid/167) != "A5")
and (A02.NAOK (/index.php/admin/questions/sa/view/surveyid/675993/gid/7/qid/168) != "A4"))

Please write your answer here:
Scenarios for term infants: Scenario 2

A term infant is born with signs of proximal bowel obstruction and a failure to pass meconium. At laparotomy, a jejunal atresia is found. A stoma and mucous fistula are formed at the site of the atresia (mid-jejunum).

At this point (immediately after stoma formation), after how many weeks do you think the stoma should be aimed to be closed? *

Only answer this question if the following conditions are met:

(A01.NAOK (/index.php/admin/questions/sa/view/surveyid/675993/gid/7/qid/167) != "A5")
and (A02.NAOK (/index.php/admin/questions/sa/view/surveyid/675993/gid/7/qid/168) != "A4")

Please choose only one of the following:

- Number of weeks (enter below)
- Unsure

Please enter number of weeks: *

Only answer this question if the following conditions are met:

Answer was 'Number of weeks (enter below)' at question '26 [Sc401]' (At this point (immediately after stoma formation), after how many weeks do you think the stoma should be aimed to be closed? )

Only an integer value may be entered in this field.

Please write your answer here:
Would you normally want the stoma closed before or after discharge home? *

Only answer this question if the following conditions are met:

Please choose only one of the following:

- Before
- After
- Unsure

In your experience, what's the earliest you have seen stoma closure performed in a baby like this?

Only answer this question if the following conditions are met:

Please write your answer here:

Current Practice

Which of these factors would make you delay a planned stoma closure?
Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)
Please choose the appropriate response for each item:

<table>
<thead>
<tr>
<th>Factor</th>
<th>Delay</th>
<th>Go ahead</th>
</tr>
</thead>
<tbody>
<tr>
<td>Invasively ventilated (clinically stable and low/moderate support)</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>Non-invasive respiratory support</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>(clinically stable BIPAP, CPAP, high flow)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Weight less than a specific threshold</td>
<td>O</td>
<td></td>
</tr>
<tr>
<td>Steroids within last week</td>
<td>O</td>
<td></td>
</tr>
</tbody>
</table>
Please specify weight threshold:

Only answer this question if the following conditions are met:
Answer was ‘Delay’ at question ‘32 [C01]’ (Which of these factors would make you delay a planned stoma closure? (Weight less than a specific threshold))

Please choose **only one** of the following:

- [ ] 500g
- [ ] 1,000g
- [ ] 1,500g
- [ ] 2,000g
- [ ] 2,500g
- [ ] 3,000g
- [ ] 3,500g
- [ ] 4,000g
- [ ] 4,500g
- [ ] 5,000g

Where ‘delay’ has been selected for ‘weight less than a specific threshold’ in the question above.
Which of these factors would make you expedite a planned stoma closure that was still some weeks away?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please choose the appropriate response for each item:

<table>
<thead>
<tr>
<th>Factor</th>
<th>Expedite</th>
<th>Unchanged</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unable to recycle stoma distally effluent (down mucous fistula)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Concern about poor growth due to stoma</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Parenteral nutrition issues e.g. liver disease or recurrent line sepsis</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Inability to advance enteral feeds due to stoma outputs</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Difficulties with managing the stoma e.g. leaking bags, prolapse, stricture, skin complications</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Are there any other factors you feel are important when deciding when to close the stoma of these infants or whether you would be willing to randomise to a trial?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please write your answer here:
Perspectives on Clinical Trial Design

When answering the following questions, please consider how any future clinical trial would be most useful to you in terms of helping decision-making in your clinical practice.

Population

1. What groups of infants should be included in a trial?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please choose the appropriate response for each item:

<table>
<thead>
<tr>
<th></th>
<th>Yes</th>
<th>No</th>
<th>Unsure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Premature infants with spontaneous intestinal perforation (SIP)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Premature infants with NEC</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Term infants with emergency stoma formation for bowel obstruction (e.g. atresias, meconium ileus, complicated gastroschisis or malrotation/volvulus)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Other (if yes, enter details below)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

We are not planning on including infants with anorectal malformations and Hirschsprung's disease, as stoma closures in these infants are usually part of a planned treatment pathway

If you have selected 'other' above, please describe here: *

Only answer this question if the following conditions are met:
Answer was 'Yes' at question '36 [E01]' (Population 1. What groups of infants should be included in a trial? (Other (if yes, enter details below)))

Please write your answer here:
2. Are there any babies that you don’t think should be included in a trial?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please write your answer here:

Intervention

3. What do you think the ‘early’ time-point should be in a trial of early vs. late stoma closure in neonates? *

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

If you choose 'Completed weeks after stoma formation:' please also specify your choice in the accompanying text field.

Only numbers may be entered in 'Completed weeks after stoma formation:' accompanying text field.
Please choose only one of the following:

- Completed weeks after stoma formation (enter number of weeks below)
- Unsure
Please enter number of weeks: *

Only answer this question if the following conditions are met:
Answer was 'Completed weeks after stoma formation (enter number of weeks below)' at question '39 [E03]' (Intervention 3. What do you think the 'early' time-point should be in a trial of early vs. late stoma closure in neonates?)

Please write your answer here:

Comparison

4. What do you think the 'later' comparison should be in such a trial? *

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

If you choose 'Completed weeks after stoma formation:' please also specify your choice in the accompanying text field.

Only numbers may be entered in 'Completed weeks after stoma formation:' accompanying text field.

Please choose only one of the following:

- Completed weeks after stoma formation (enter number of weeks below)
- Unsure

Please enter number of weeks: *

Only answer this question if the following conditions are met:
Answer was 'Completed weeks after stoma formation (enter number of weeks below)' at question '41 [E04]' (Comparison 4. What do you think the 'later' comparison should be in such a trial?)

Please write your answer here:
Outcomes

5. A core outcome set for neonatology has been identified to help standardise outcome selection in clinical trials and ensure these are relevant to those most affected by neonatal care (https://fn.bmj.com/content/105/4/425 (https://fn.bmj.com/content/105/4/425)). We would envisage these outcomes would be included in any trial of stoma closure.

In addition, there are likely to be study-specific outcomes that it are important to include. Please score how important you feel these potential trial outcome measures are.

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please choose the appropriate response for each item:

<table>
<thead>
<tr>
<th>Outcome</th>
<th>Not Important</th>
<th>Little Important</th>
<th>Very Important</th>
<th>Extremely Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length of hospital stay</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Duration of parenteral nutrition (PN)</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Time to full enteral feeds</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Growth</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Complications of surgery e.g. anastomotic leak or stricture</td>
<td>○</td>
<td>○</td>

<td>Please indicate any others you think are important (describe below)</td>
<td>○</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
</tbody>
</table>
For 'any others' selected above, please describe these outcomes here: *

Only answer this question if the following conditions are met:
Answer was NOT at question '43 [E06]' (Outcomes 5. A core outcome set for neonatology has been identified to help standardise outcome selection in clinical trials and ensure these are relevant to those most affected by neonatal care (https://fn.bmj.com/content/105/4/425). We would envisage these outcomes would be included in any trial of stoma closure. In addition, there are likely to be study-specific outcomes that it are important to include. Please score how important you feel these potential trial outcome measures are. (Please indicate any others you think are important (describe below)))

Please write your answer here:
6. What should be the primary outcome of any trial of early vs. late stoma closure?

Only answer this question if the following conditions are met:
((A01.NAOK (/index.php/admin/questions/sa/view/surveyid/675993/gid/7/qid/167) != "A5")
and (A02.NAOK (/index.php/admin/questions/sa/view/surveyid/675993/gid/7/qid/168) != "A4"))

Choose one of the following answers
Please choose only one of the following:

- Length of hospital stay
- Duration of parenteral nutrition (PN)
- Time to full enteral feeds
- Growth
- Complications of surgery e.g. anastomotic leak or stricture
- Days of invasive ventilation post-operatively
- Parental experience
- Survival
- Sepsis
- Necrotising enterocolitis
- Brain injury on imaging
- Retinopathy of prematurity (preterm only)
- General gross motor ability
- General cognitive ability
- Quality of life
- Adverse events
- Visual impairment or blindness
- Hearing impairment or deafness
- Chronic lung disease/bronchopulmonary dysplasia (preterm only)
- Other

* list from Core outcomes in neonatology and above list

Potential Organisational Barriers to a Clinical Trial
If we were to design a trial that compared prescribed timings of stoma closure, how would you foresee the following factors influencing this in your centre?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please choose the appropriate response for each item:

<table>
<thead>
<tr>
<th>Factor</th>
<th>No issue</th>
<th>May be a problem</th>
<th>Likely to be a significant problem</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ability to access neonatal operating list at short notice</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Access to a ventilated neonatal bed post-operatively</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Surgeon availability e.g. flexibility within job plan</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Willingness of anaesthetists to facilitate the trial</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Transfer of infant to the surgical centre for the closure</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Willingness of you and your colleagues to facilitate the trial e.g. sharing cases</td>
<td>○</td>
<td>○</td>
<td>○</td>
</tr>
</tbody>
</table>
Please indicate if there are other likely barriers to running the trial at your unit.

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please write your answer here:

In your unit, from when a decision to close a stoma is made, how long on average does it take to do this, taking into account factors such as waiting for theatre space?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please write your answer here:

weeks

Would you be interested in attending a final consensus meeting at the end of the ToSCiN study?

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Please choose only one of the following:

- Yes
- No
If you would like to receive feedback about the results of ToSCiN, please provide your details below:

Only answer this question if the following conditions are met:
Answer was NOT 'Other' at question '1 [A01]' (Your role) and Answer was NOT 'Other' at question '2 [A02]' (Description of the type of unit you work in:)

Thank you for completing this survey.

We will provide feedback of the results at the end of the ToSCiN study.

29/09/2020 – 17:30
Submit your survey.
Thank you for completing this survey.
