

Appendix 1

Cancer Research UK Clinical Centre
Somers Cancer Research Building, Mail Point 824
Southampton General Hospital, Tremona Road
Southampton SO16 6YD, UK
T 023 8079 6184

CONSENT FORM
Upper Gastro-Intestinal Tumour Ecology
IRAS 233065
CI: Prof Tim Underwood

Please
Initial

- I confirm that I have read and understand the information sheet for the above study and have had the opportunity to ask questions.
- I understand that my participation is voluntary and that I am free to withdraw at any time, without giving any reason, without my medical care or legal rights being affected. However, I understand that samples that have already been used to generate data and/or cell lines cannot be withdrawn but any unused samples can be destroyed if I request this.
- I understand that sections of any of my medical notes and data collected may be looked at by individuals from the Cancer Research UK Clinical Centre (Southampton), or from regulatory authorities or from the NHS Trust where it is relevant to my taking part in research. I give permission for these individuals to have access to my records.
- I agree to take part in the above study.
- I give permission for left-over samples to be stored and used for future ethically approved studies.
- I give permission for DNA analysis to be carried out on the collected samples.
- I give permission for information to be collected, stored, and used for research in a database held at the Cancer Research UK Clinical Centre (Southampton).
- I give permission for anonymised cell-lines created from my samples to be stored in a cell bank. I understand anonymous clinical information will be associated with these cell models and they will be shared with other researchers and companies around the world to be used in future academic research and possibly for commercial purposes. I understand that it will not be possible to recall or destroy the cell-lines and data once produced.
- I give permission for anonymised sequencing data to be collected, stored, used for research and made available to other researchers around the world on open access, publicly available research servers.
